11	SF 9011	<a href="#">Mechanics of Unsaturated Soils</a>	3	0	0	3

**OBJECTIVE:**

- To familiarize the students in the field of differential and elliptic equations to solve boundary value problems associated with engineering applications.
- To expose the students to variational formulation and numerical integration techniques and their applications to obtain solutions for buckling, dynamic response, heat and flow problems of one and two dimensional conditions.

**UNIT I ONE DIMENSIONAL WAVE AND HEAT EQUATIONS 10+3**

Laplace transform methods for one-dimensional wave equation – Displacements in a long string – longitudinal vibration of an elastic bar – Fourier transform methods for one-dimensional heat conduction problems in infinite and semi-infinite rods.

**UNIT II ELLIPTIC EQUATION 9+3**

Laplace equation – Properties of harmonic functions – Solution of Laplace's equation by means of Fourier transforms in a half plane, in an infinite strip and in a semi-infinite strip – Solution of Poisson equation by Fourier transform method.

**UNIT III CALCULUS OF VARIATIONS 9+3**

Concept of variation and its properties – Euler's equation – Functional dependant on first and higher order derivatives – Functionals dependant on functions of several independent variables – Variational problems with moving boundaries – Direct methods – Ritz and Kantorovich methods.

**UNIT IV EIGEN VALUE PROBLEMS 9+3**

Methods of solutions: Faddeev –Leverrier Method, Power Method with deflation – Approximate Methods: Rayleigh –Ritz Method.

**UNIT V NUMERICAL INTEGRATION 8+3**

Gaussian Quadrature – One and Two Dimensions – Gauss Hermite Quadrature – Monte Carlo Method – Multiple Integration by using Mapping Function.

**TOTAL (L:45+T:15): 60 PERIODS**

**OBJECTIVE:**

- Students are expected to understand elastic and plastic behaviour of soil and solve problems related to settlement and stability of soils structures.

<b>UNIT I</b>	<b>THEORY OF ELASTICITY</b>	<b>10</b>
Introduction –Material behaviour – Idealistic behaviour – elastic, viscous and plastic - Elasticity and stability problems, concept of stress and strain – plane stress, plane strain and axisymmetric problems – equation of equilibrium and compatibility – stress functions.		
<b>UNIT II</b>	<b>STRESSES AND DISPLACEMENTS (ELASTIC SOLUTIONS)</b>	<b>15</b>
Stresses in elastic half-space medium by external loads – fundamental solutions – Boussinesq, Flamant, Kelvin and Mindlin solution – Applications of fundamental solutions – Anisotropic and non-homogeneous linear continuum – Influence charts - elastic displacement.		
<b>UNIT III</b>	<b>LIMIT EQUILIBRIUM ANALYSIS</b>	<b>12</b>
Limit equilibrium analysis – perfectly plastic material – stress – strain relationship – stress and displacement field calculations – slip line solutions for undrained and drained loading.		
<b>UNIT IV</b>	<b>LIMIT ANALYSIS</b>	<b>15</b>
Limit analysis – principles of virtual work – theorems of plastic collapse – Mechanism for plane plastic collapse – Simple solutions for drained and undrained loading – stability of slopes, cuts and retaining structures.		
<b>UNIT V</b>	<b>FLOW THROUGH POROUS MEDIA</b>	<b>8</b>
Flow through porous media – Darcy’s law – General equation of flow – steady state condition – solution by flow net – fully saturated conditions.		

**TOTAL: 60 PERIODS****REFERENCES:**

10. Winterkorn, H.F., and Fang, H.Y., Foundation Engineering Handbook, Galgotia, Booksource, 2000.

**OBJECTIVE:**

- The main objective of this course is to understand stress-strain characteristics of soils, the mechanism of failure, the factors that affects the shear strength and the various test procedures to determine the shear strength.

**UNIT I      SHEAR STRENGTH OF COHESIONLESS SOILS      9**

Shear strength of granular soils - Direct shear - Triaxial Testing- Drained and undrained Stress-strain behaviour - Dilation, contraction and critical states - Liquefaction and cyclic mobility of saturated sands. Factors influencing stress-strain and shear strength.

**UNIT II      SHEAR STRENGTH OF COHESIVE SOILS      9**

Shear strength of clays - Stress-strain behaviour - Triaxial testing and stress path plotting - pore pressure parameter of Skempton and Henkel - Total stress and effective stress approach - shear strength of partially saturated clay in terms of stress state variables. Factors influencing stress-strain and shear strength.

**UNIT III      YIELD CRITERION      9**

Concepts of yield and failure in soils- yield criteria of von Mises, Tresca and their extended form, their applicability to soils - Detailed discussion of Mohr. - Coulomb failure criterion.

**UNIT IV      STRESS - STRAIN LAWS FOR SOILS      9**

Stress-strain laws for soils - hyperbolic law - Linear visco-elastic and Elasto -plastic laws - yield functions, hardening law, flow rules and plastic strain computation - Rheological models of Kelvin, Maxwell and Burger and Burger as applied to soils.

**UNIT V      CRITICAL STATE SOIL MECHANICS      9**

Introduction to critical state soil mechanics - state boundary - surface- Roscoe and Hvorslev's - A perspective only on mechanical behaviour of soils within the critical state framework.

**SOIL PROPERTIES AND BEHAVIOUR**

**L T P C**  
**3 0 0 3**

**OBJECTIVE:**

- At the end of the course the student gains knowledge on the various factors governing the Engineering behaviour of soils and the suitability of soils for various Geotechnical Engineering applications.

**UNIT I SOIL DEPOSITS AND CLAY MINERALS 8**

Introduction – formation of soils – various soil deposits and their engineering suitability – Genesis of clay minerals – classification and identification – Anion and Cation exchange capacity of clays – specific surface area – bonding in clays.

**UNIT II PHYSICAL AND PHYSIO-CHEMICAL BEHAVIOUR OF SOILS 10**

Physical and physio – chemical behaviour of soils – diffused double layer theory – computation of double layer distance – effect of ion concentration, ionic valency, dielectric constant, temperature on double layer – stern layer – attractive and repulsive forces in clays – soil structure – soil water – mechanism of soil – water interactions.

**UNIT III SWELLING AND SHRINKAGE BEHAVIOUR 10**

Swelling and shrinkage behaviour of soils – problems associated – factors influencing swell – shrink characteristics – swell pressure determination – osmotic swell pressure – soil fabric and measurement – sensitivity, thixotrophy – stress history – soil compaction – soil suction – determination of suction potential.

**UNIT IV COMPRESSIBILITY, PERMEABILITY AND SHEAR STRENGTH BEHAVIOUR 10**

Compressibility and shear strength behaviour of soils and clays – mechanisms involved – liquefaction potential – Factors governing compressibility, shear strength and permeability of soils.

**UNIT V CONDUCTION PHENOMENA AND PREDICTION OF SOIL BEHAVIOUR 7**

Conduction in soils – coupled flows – electrical, chemical, hydraulic and thermal flows in soils – consolidation by electro osmosis – prediction of engineering behaviour of soils – empirical correlations and their applicability.

**SF 9001 EARTH PRESSURE AND EARTH RETAINING STRUCTURES L T P C  
3 0 0 3**

**OBJECTIVE:**

- At the end of this course, students are expected to analyse and design rigid, flexible earth retaining structures, slurry supported trenches and deep cuts.

**UNIT I EARTH PRESSURE THEORIES 12**

Introduction – State of stress in retained soil mass – Earth pressure theories – Classical and graphical techniques – Active and passive cases – Earth pressure due to external loads, empirical methods. Wall movement and complex geometry.

**UNIT II COMPACTION, DRAINAGE AND STABILITY OF RETAINING STRUCTURES 8**

Retaining structure – Selection of soil parameters - Lateral pressure due to compaction, strain softening, wall flexibility, drainage arrangements and its influence. Earth pressure due to earthquake forces – Stability of retaining structure.

**UNIT III SHEET PILE WALLS 8**

Analysis and design of cantilever and anchored sheet pile walls. Deadman and continuous anchors.

**UNIT IV SUPPORTED EXCAVATIONS 8**  
 Lateral pressure on sheeting in braced excavation, stability against piping and bottom heaving. Earth pressure around tunnel lining, shaft and silos – Soil anchors – Soil pinning – Soil nailing – Basic design concepts.

**UNIT V SLURRY SUPPORTED TRENCHES 9**  
 Basic principles - Diaphragm and bored pile walls – stability Analysis and design – specification of slurry.

**SF 9002 EARTH AND ROCK FILL DAMS L T P C**  
**3 0 0 3**

**OBJECTIVE:**

- Students are expected to learn reasons for failure and damages of embankments and slopes, various methods analysis of slopes and remedial techniques to protect the slopes.

**UNIT I DESIGN CONSIDERATION 9**  
 Design consideration, Factors influencing design, Types of earth and rockfill dams, Design details, Provisions to control pore pressure.

**UNIT II STABILITY OF SLOPES 12**  
 Introduction, Stability of infinite and finite slopes, Limit Equilibrium method, Wedge analysis, Method of Slices, Bishop’s method, Janbu’s method etc. Special aspects of slope analysis, stability charts. Role of geosynthetics in stabilization of slopes.

**UNIT III SEEPAGE ANALYSIS 5**  
 Seepage analysis, Flownets, Stability conditions during construction, Full reservoir and drawdown - cut off walls – Trenches – Importance of drainage and filters.

**UNIT IV FAILURE AND DAMAGES 9**  
 Failure and damages, Nature and importance of failures in embankment and foundation - Piping, Differential settlement, Foundation slides, Earthquake damage, creep and anisotropic effects, Reservoir wave action, Dispersive piping.

**UNIT V SPECIAL DESIGN PROBLEM 10**  
 Special design problems, Slope protection, Filter design, Foundation treatment, Earth dams on pervious soil foundation, Application of Geosynthetic materials in filtration. Treatment of rock foundation, Construction Techniques, Quality control and performance measurement.

**TOTAL: 45 PERIODS**

**SF 9003 GEOENVIRONMENTAL ENGINEERING L T P C**  
**3 0 0 3**

**OBJECTIVE:**

- The student acquires the knowledge on the Geotechnical engineering problems associated with soil contamination, safe disposal of waste and remediate the contaminated soils by different techniques thereby protecting environment.

**UNIT I SOIL – POLLUTANT INTERACTION 8**  
 Introduction to Geoenvironmental engineering – environmental cycle – sources, production and classification of waste – causes of soil pollution – factors governing soil-pollutant interaction – failures of foundations due to pollutants – case studies.

**UNIT II SITE SELECTION AND SAFE DISPOSAL OF WASTE 10**  
 Safe disposal of waste – site selection for land fills – characterization of land fill sites and waste - Risk assessment - . Stability of land fills – current practice of waste disposal – monitoring facilities - passive containment system – application of geosynthetics in solid waste management – rigid or flexible liners.

**UNIT III TRANSPORT OF CONTAMINANTS 8**

Contaminant transport in sub surface – advection – diffusion – dispersion – governing equations – contaminant transformation – sorption – biodegradation – ion exchange – precipitation – hydrological consideration in land fill design – ground water pollution – bearing capacity of compacted fills – foundation for waste fill ground – pollution of aquifers by mixing of liquid waste – protecting aquifers.

**UNIT IV WASTE STABILIZATION AND DISPOSAL 10**

Hazardous waste control and storage system – stabilization/ solidification of wastes – micro and macro encapsulation – absorption, adsorption, precipitation - detoxification – mechanism of stabilization – organic and inorganic stabilization – utilization of solid waste for soil improvement – case studies.

**UNIT V REMEDIATION OF CONTAMINATED SOILS 9**

Rational approach to evaluate and remediate contaminated sites – monitored natural attenuation – exsitu and insitu remediation – solidification, bio – remediation, incineration, soil washing, electro kinetics, soil heating, vetrification, bio venting – Ground water remediation – pump and treat, air sparging, reactive well – case studies.

**SF 9004 ROCK MECHANICS IN ENGINEERING PRACTICE L T P C  
3 0 0 3**

**OBJECTIVE:**

- Students are expected to classify, understand stress-strain characteristics, failure criteria, and influence of insitu stress in the stability of various structures and various technique to improve the insitu strength of rocks.

**UNIT I CLASSIFICATION OF ROCKS 9**

Rocks of peninsular India and the Himalayas - Index properties and classification of rock masses, competent and incompetent rock - value of RMR and ratings in field estimations.

**UNIT II STRENGTH CRITERIA OF ROCKS 9**

Behaviour of rock under hydrostatic compression and deviatoric loading - Models of rock failure - planes of weakness and joint characteristics - joint testing, Mohr - Coulomb failure criterion and tension cut-off. Hoek and Brown Strength criteria for rocks with discontinuity sets.

**UNIT III DESIGN ASPECTS IN ROCKS 10**

In situ stresses and their measurements, Hydraulic fracturing, flat jack, over coring and under coring methods - stress around underground excavations - Design aspects of openings in rocks - case studies.

**UNIT IV SLOPE STABILITY OF ROCKS 9**

Rock slopes - role of discontinuities in slope failure, slope analysis and factor of safety - remedial measures for critical slopes - case studies.

**UNIT V REINFORCEMENT OF ROCKS 8**

Reinforcement of fractured and jointed rocks - shotcreting, bolting, anchoring, installation methods - case studies.

**SF 9005 FINITE ELEMENT METHOD AND APPLICATIONS L T P C**  
**3 0 0 3**

**OBJECTIVE:**

- To understand the basic concepts, principles and other formulation in finite element method and its application in geotechnical engineering through software.

**UNIT I BASIC CONCEPTS 9**

Basic concepts - Discretization of continuum, typical elements, the element characteristic matrix, element assembly and solution for unknowns - Applications.

**UNIT II VARIATIONAL PRINCIPLES 9**

Variational principles, variational formulation of boundary value problems, variational methods approximation such as Ritz and weighted residual (Galerkin) methods, Applications.

**UNIT III DISPLACEMENTS BASED ELEMENTS 9**

Displacements based elements, finite elements for axial symmetry. One-dimensional problems of stress, deformation and flow, assembly, convergence requirements, Finite elements analysis of two-dimensional problems. The linear and quadratic triangle, Natural coordinates.

**UNIT IV ISOPARAMETRIC FORMULATION 9**

Isoparametric formulation – Isoparametric bar element – plane bilinear isoparametric element – refined elements – Numerical integration techniques.

**UNIT V APPLICATIONS IN GEOTECHNICAL ENGINEERING 9**

Use of FEM to Problems in soils and rocks, Introduction to non-linearity. Description and application to consolidation, seepage and soil – structure interaction problems.

**PAVEMENT ENGINEERING**

**L T P C  
3 0 0 3**

**OBJECTIVE:**

- Student gains knowledge on designing rigid and flexible pavements for different serviceability conditions of roads.

**UNIT I BASIC CONCEPTS 9**

Pavements types – Historical developments - Approaches to pavement design – vehicle and traffic considerations – behaviour of road materials under repeated loading – Stresses and deflections in layered systems.

**UNIT II FLEXIBLE PAVEMENT 9**

Factors affecting flexible pavements – material characterization for analytical pavement design – CBR and stabilometer tests – Resilient modulus – Fatigue subsystem – failure criteria for bituminous pavements – IRC design guidelines.

**UNIT III RIGID PAVEMENT 9**

Factors affecting rigid pavements - Design procedures for rigid pavement – IRC guidelines – Airfield pavements. Highway pavements – CRC pavements.

**UNIT IV PAVEMENT EVALUATION AND REHABILITATION 9**

Pavement evaluation and rehabilitation, condition and evaluation surveys causes and types of distress – in flexible and rigid pavements – PSI models – Serviceability index of rural roads – Overlay design, pavements maintenance management and construction.

**UNIT V STABILIZATION OF SOILS FOR ROAD CONSTRUCTIONS 9**

The need for a stabilized soil – Design criteria and choice of stabilizers – Testing and field control – Stabilisation in India for rural roads – Use of Geosynthetics in road construction - Case studies.

**OBJECTIVE:**

- To understand the mechanism of soils, their interactive behaviour, analysis, its influences in the design parameters through design charts and software packages.

**UNIT I SOIL-FOUNDATION INTERACTION 6**

Introduction to soil - Foundation interaction problems, Soil behaviour, Foundation behaviour, Interface, behaviour, Scope of soil-foundation interaction analysis, soil response models, Winkler, Elastic continuum, Two parameter elastic models, Elastic - plastic behaviour, Time dependent behaviour.

**UNIT II BEAM ON ELASTIC FOUNDATION - SOIL MODELS 10**

Infinite beam, Two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness – Analysis through application packages.

**UNIT III PLATE ON ELASTIC MEDIUM 10**

Infinite plate, Winkler, Two parameters, Isotropic elastic medium, Thin and thick plates, Analysis of finite plates, rectangular and circular plates, Numerical analysis of finite plates, simple solutions, Analysis of braced cuts - Application packages.

**UNIT IV ELASTIC ANALYSIS OF PILE 10**

Elastic analysis of single pile, Theoretical solutions for settlement and load distribution, Analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap - pile raft - Application packages

**UNIT V LATERALLY LOADED PILE 9**

Load deflection prediction for laterally loaded piles, subgrade reaction and elastic analysis, Interaction analysis, and pile raft system, solutions through influence charts and Application packages.

**TOTAL: 45 PERIODS****REFERENCES:**

**OBJECTIVE:**

- Students are expected to understand the importance of site investigation, planning of sub soil investigation, interpretation of investigated data to design suitable foundation system.

**UNIT - I SCOPE AND OBJECTIVE:S OF EXPLORATION 8**

Scope and objectives, planning and exploration program, methods of exploration, exploration for preliminary and detailed design, spacing and depth of bores, data presentation. Geophysical exploration and interpretation, seismic and electrical methods.

**UNIT - II EXPLORATION TECHNIQUES 7**

Methods of boring and drilling, non-displacement and displacement methods, drilling in difficult subsoil conditions, stabilization of boreholes, bore logs.

**UNIT - III SOIL SAMPLING 8**

Sampling, disturbed and undisturbed soil sampling advanced sampling techniques, offshore sampling, shallow penetration samplers, preservation and handling of samples.

**UNIT - IV FIELD TESTING IN SOIL EXPLORATION 12**

Field tests, penetration tests, procedures and methods, data interpretation, Field vane shear, Insitu shear and bore hole shear test, pressuremeter test, utility, correction and data interpretation, plate load test–monotonic and cyclic; field permeability test.

**UNIT - V INSTRUMENTATION 10**

Instrumentation in soil engineering, strain gauges, resistance and inductance type, load cells, earth pressure cells, settlement and heave gauges, piezometers and slope indicators, inclinometer, case studies.

**TOTAL: 45 PERIODS**

**OBJECTIVE:**

- To understand the mechanism of the reinforcement, its influence in the shear strength and design concept for various applications in geotechnical engineering.

**UNIT I PRINCIPLES AND MECHANISMS OF SOIL REINFORCEMENT 7**  
Historical Background, Principles, Concepts and Mechanisms of reinforced earth.

**UNIT II REINFORCING MATERIALS AND THEIR PROPERTIES 10**  
Materials used in reinforced soil structures, fill materials, reinforcing materials metal strips, Geotextile, Geogrids, Geomembranes, Geocomposites and Geojutes, Geofoam, Natural fibers - facing elements – Properties and methods of Testing.

**UNIT III DESIGN OF SOIL REINFORCEMENT 13**  
Reinforcing the soil-Geotextiles and Geogrids – Embankments and slopes – reinforced walls – bearing capacity – Road way reinforcement – slop stabilization.

**UNIT IV DESIGN FOR SEPARATION, FILTRATION AND DRAINAGE 10**  
Geotextiles - requirement for design of separation – Filtration – General behaviour - filtration behind retaining wall, under drains, erosion control and silt fence – drainage design – Liners for liquid containment – Geomembrance and Geosynthetic clay liners.

**UNIT V DURABILITY OF REINFORCEMENT MATERIALS 5**  
Measurement of corrosion factors, resistivity - redox potential, water content, pH, electrochemical corrosion, bacterial corrosion – influence of environmental factors on the performance of Geosynthetic materials.

**TOTAL : 45 PERIODS**

**OBJECTIVE:**

- The objective of this course is to understand the dynamics of earth and its response, effect on earth structure and measures to mitigate the effects.

**UNIT - I ELEMENTS OF EARTHQUAKE SEISMOLOGY AND DYNAMICS 6**

Mechanism of Earthquakes - Causes of earthquake - Earthquake Fault sources - Elastic Rebound theory - Seismic wave in Earthquake shaking - Definition of earthquake terms - Locating an earthquake - Quantification of earthquakes.

**UNIT - II GROUND MOTION CHARACTERISTICS 9**

Strong Motion Records - characteristics of ground motion - Factors influencing ground motion - Estimation of frequency content parameters - Seismic site investigations - Evaluation of Dynamic soil properties.

**UNIT - III GROUND RESPONSE ANALYSIS - LOCAL SITE EFFECTS AND DESIGN GROUND MOTION 10**

Wave propagation Analysis - Site Amplification, Ground Response Analysis - Method of analysis - One Dimensional Analysis - Equivalent linear Analysis – shear beam Analysis - site effects - Design Ground Motion - Developing Design Ground Motion. Application of software package - codal recommendations.

**UNIT - IV SEISMIC STABILITY ANALYSIS 14**

Earthquake Resistant Design of foundation of buildings - Design considerations - Geotechnical - Architectural - Structural - Capacity Design - Seismic analysis. Earthquake Response of slopes - Evaluation of slope stability - Pseudostatic Analysis - Newmark's Study of Block Analysis - Dynamic Analysis - Earth pressure due to ground shaking valuation. Liquefaction-Susceptibility-Evaluation Cyclic stress approach - Liquefaction Resistance - Field Tests with interpretation - Lateral Deformation - codal recommendations.

**UNIT - V EARTHQUAKE HAZARD MITIGATION 6**

Seismic risk vulnerability and hazard - Risk mapping - scale – changing percept of risk – vulnerability Atlas of India. Hazard assessment - Maintenance and modifications to improve hazard resistance; Seismic microzonation – methodology – scale of mapping - Different type of foundation and its impact on safety.

**OBJECTIVE:**

- At the end of this course students attains adequate knowledge in assessing both physical and engineering behaviour of unsaturated soils, measurement and modeling of suction – water content and suction – hydraulic conductivity of unsaturated soils.

**UNIT I STATE OF UNSATURATED SOIL 6**

Definition – Interdisciplinary nature of unsaturated soil – soil classification – Nature and practice – stress profiles, stress state variables - material variables – constitutive law – suction potential of soil water

**UNIT II PHYSICS OF SOIL WATER SYSTEM 9**

Physical properties of Air and water – partial pressure and relative Humidity Density of moist air – surface Tension – cavitations of water. Solubility of Air in water – Air – water solid interface – vapor pressure lowering – soil water characteristic-curve. Capillary tube model – contacting sphere model. Young Laplace equation – Height of capillary rise – Rate of capillary rise – capillary pore size distribution – theoretical basis – determination – laboratory method.

**UNIT III STRESS STATE VARIABLES AND SHEAR STRENGTH 12**

Effective-stress – stress between two spherical particles – Hysteresis in SWCC – stress parameter, stress tensor – stress control by Axis Translation - analytical representation of stress – volume change characteristics. Extended Mohr – Coulomb criterion – shear strength parameters – Interpretation of Direct shear test results and Tri axial test results – unified representation of failure envelope – Influence of suction in earth pressure distribution.

**UNIT IV STEADY AND TRANSIENT FLOWS 9**

Driving mechanism – Permeability and Hydraulic conductivity – capillary barriers – steady infiltration and evaporation – Vapor flow – Air diffusion in water. Principles for pore liquid flow – Rate of infiltration, Transient suction and moisture profiles. Principles for Pore Gas flow – Barometric pumping Analysis.

**UNIT V MATERIAL VARIABLE MEASUREMENT AND MODELLING 9**

Measurement of total suction – psychrometers – Filter paper measurement of matric suction – High Air Entry disks – Direct measurements – Tensiometers – Air-translation technique – Indirect measurements – Thermal conductivity sensors – measurement of osmotic suction – squeezing technique – soil water characteristic curves and Hydraulic conductivity models.
