**UNIT I ATOMIC STRUCTURE 9**

Wave equation – hydrogen atom and polyelectron atoms; electronic configuration and term symbols, periodic properties of elements – atomic size, ionisation energy, electron affinity, electronegativity, covalent and ionic radii, magnetic properties.

**UNIT II NON-VALENCE FORCES 9**

Van der Waals' forces, hydrogen bond – clathrates, metallic bond – free electron theory of metals, ionic solids – lattice energy – Born-Haber cycle.

**UNIT III CRYSTAL STRUCTURE 9**

Radius ratio, structures of AX, AX<sub>2</sub>, A<sub>2</sub>X<sub>3</sub>, ABX<sub>3</sub> and A<sub>2</sub>BX<sub>4</sub> type solids – layer structure – cadmium iodide; covalent solids – diamond, graphite.

**UNIT IV COVALENT BOND 9**

Valence bond theory – hybridization and resonance – diatomic and polyatomic systems; VSEPR theory; molecular orbital theory – LCAO approximation for diatomic and polyatomic systems.

**UNIT V AQUEOUS AND NON-AQUEOUS CHEMISTRY 9**

Acid-base concepts, HSAB theory, non-aqueous solvents – reactions in liquid ammonia, sulphuric acid, aprotic solvents; molten salts; electrode potentials and applications in inorganic systems.

**UNIT I STEREOCHEMISTRY****10**

Optical activity and chirality - classification of chiral molecules as asymmetric and dissymmetric - Newman, Sawhorse Wedge and Fischer projection formulae and interconversion - R,S-nomenclature - diastereoisomerism in acyclic and cyclic systems - enantiotopic, homotopic and diastereotopic hydrogens and prochiral carbons - optical activity of biphenyls, allenes and spirans - stereospecific and stereoselective syntheses- asymmetric synthesis - Cram's rule - Prelog's rule - conformational analysis of cyclic and acyclic compounds - conformation and reactivity - conformation and stereochemistry of cis and trans decalin and 9-methyl decalin - E,Z-nomenclature - E,Z-isomerism of olefins containing one double bond and more than one double bond - determination of configuration of geometrical isomers using physical and chemical methods.

**UNIT II ADDITION REACTIONS****8**

Reactive intermediates - formation and stability of carbonium ions, carbanions, carbenes and carbenoids, nitrenes, radicals and arynes - addition to carbon-carbon and carbon-hetero multiple bonds - electrophilic, nucleophilic and free radical additions - stereochemistry of addition to carbon-carbon multiple bonds - orientation and reactivity - addition to conjugated systems and orientation -addition to  $\alpha,\beta$ -unsaturated carbonyl compounds.

**UNIT III SUBSTITUTION REACTIONS****10**

Aliphatic nucleophilic substitutions -  $S_N1$ ,  $S_N2$  and  $S_{Ni}$  mechanisms - effects of substrate, attacking nucleophile, leaving group and solvent - stereochemistry of nucleophilic substitution reactions - mechanism of ester hydrolysis ( $B_{AC}^2$ ,  $A_{AC}^2$  and  $A_{AL}^1$ ) - alkylation of active methylene compounds - substitutions at carbonyl, bridgehead, vinylic and allylic carbons - neighbouring group participation - labelling and kinetic isotope effects - norbornyl cation and other non-classical carbocations, ambident nucleophiles - O versus C alkylation - aromatic nucleophilic substitution - mechanisms - effects of substrate, structure, leaving group and attacking nucleophile - various methods of benzyne generation and reactions of benzyne, reactions of aryl diazonium salts - vicarious nucleophilic substitution (VNS) - aromatic electrophilic substitution reactions and mechanisms.

**UNIT IV ELIMINATION REACTIONS****7**

E1, E2 and E1cB mechanisms - stereochemistry of E2 elimination - Hofmann and Saytzeff rule - competition between elimination and substitution reactions - orientation effects in elimination reactions - effects of substrate structures, attacking base, leaving group and medium on E1 and E2 reactions - pyrolytic eliminations - Bredt's rule.

Birch, Clemmensen, Wolff-Kishner and Meerwein-Ponndorf-Verley reductions - Oppenauer oxidation - Claisen, Dieckmann, Benzoin, Darzens and Stobbe condensations - Chugaev and Cope eliminations - Michael addition - Mannich reaction - Wittig reaction - Chichibabin reaction - Hunsdiecker reaction - Robinson annulation - Hell-Volhard-Zelinsky reaction - Japp-Klingemann reaction - Stork enamine alkylation - Ziegler alkylation - Vilsmeier-Haack reaction - Heck reaction - Shapiro reaction - Polonovski reaction - Sharpless asymmetric epoxidation - Hofmann-Löffler-Freytag reaction - Reformatsky reaction - Simmons-Smith reaction - Gattermann-Koch reaction - Schiemann reaction - Ene reaction - von Braun reaction - Ullmann reaction - Thorpe reaction.

**UNIT I CHEMICAL THERMODYNAMICS****9**

First law of thermodynamics – Joule Thomson effect – second law of thermodynamics - free energy and work function - Maxwell relations – third law of thermodynamics - entropies of chemical reactions – partial molar properties – chemical potential - Vant Hoff's equation - Gibbs – Duhem equation.

**UNIT II PHASE EQUILIBRIA****9**

Gibb's Phase rule-two component systems – classification – liquid-liquid and liquid vapour equilibria ( fractional distillation ) solid – gas (dehydration and rehydration of  $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ ), solid-liquid systems( Bi-Cd, Al-Mg and – benzene – picric acid systems),– three component systems involving liquid–liquid equilibria.

**UNIT III MOLECULAR SYMMETRY AND GROUP THEORY****9**

Symmetry elements and symmetry operations – group postulates – types of groups – point groups – representation of molecular point groups – great orthogonality theorem – character tables– reduction of reducible representations –construction of character tables - applications of group theory.

**UNIT IV ELECTROCHEMISTRY****9**

Ion-solvent and ion-ion interaction, ion transport in solutions-electrochemical cells electrical double layer – various models – electrocapillary phenomena –electrokinetic phenomena–electro-osmosis -streaming potential and electrophoresis –kinetics of electrode processes – Butler–Volmer equation – Tafel equation

**UNIT V APPLIED ELECTROCHEMISTRY****9**

Electrochemical energy conversion – Ag – Zn cells- dry cells – Batteries- lead acid, Ni-Cd and lithium ion-fuel cells ( Hydrogen – Oxygen) galvanic corrosion – methods of –corrosion control – electroplating – electroforming and electrochemical machining – electrorefining – electrolytic oxidation and reduction

7. Cotton F.A. Chemical Application of group theory, 3<sup>rd</sup> Edn. Wiley, New York (2003).

**UNIT I WET CHEMICAL METHODS OF ANALYSIS 9**

Volumetric analysis –neutralization, precipitation, complexometric and redox titrations- theoretical titrations curves - theory of indicators; Gravimetric analysis- volatilization and precipitation methods- homogeneous precipitation; Colorimetric analysis - principles and applications- estimation of iron and nickel.

**UNIT II SPECTRAL METHODS 9**

Molecular and atomic spectroscopy - interaction of electromagnetic radiation with matter – Beer-Lambert law - UV / Visible absorption spectroscopy- photometric titrations, IR absorption spectroscopy; Fluorescence, phosphorescence and chemiluminescence methods; Atomic spectroscopy – atomic absorption spectrometry; Emission spectroscopy - flame photometry and ICP-AES; atomic fluorescence spectroscopy; Principles, instrumentation and analytical applications of spectral methods.

**UNIT III ELECTROANALYTICAL TECHNIQUES 9**

Conductometry, and high frequency titrations; Potentiometry, pH-metry, Ion selective electrodes; Electrogravimetry and coulometry; Voltammetry –polarography, amperometric titrations and anodic stripping voltammetry; principles, practice and applications.

**UNIT IV SEPARATION TECHNIQUES 9**

Solvent extraction and Ion exchange techniques – principles and applications; Chromatographic techniques – adsorption chromatography, thin layer chromatography, gas chromatography, high performance chromatography, size exclusion chromatography; Supercritical fluid chromatography.

**UNIT V THERMAL METHODS OF ANALYSIS, SAMPLING AND EVALUATION OF ANALYTICAL DATA 9**

Thermal analytical techniques – TGA, DTA, DSC – principles, instrumentation and applications; Sampling methods - Types of errors-evaluation of analytical data-statistical methods.

**UNIT I QUALITATIVE ANALYSIS OF TWO-COMPONENT MIXTURES 30**

Separation of two component mixture, analysis for hetero atoms, functional group analysis, derivative preparation and confirmatory tests

**UNIT II QUANTITATIVE ORGANIC ANALYSIS 30**

Percentage purity of aniline, phenol, acetone, glucose and glycerol. Determination of acid value, saponification value and iodine value of oils. Determination of fatty acid content, total alkali content and moisture content of soap

**UNIT III PURIFICATION OF SOLVENTS AND REAGENTS 45**

Purification of liquids by distillation Purification of solids by recrystallisation  
Determination of melting point Determination of boiling point by capillary method  
Analysis with thin layer and column chromatographic techniques

**UNIT IV ORGANIC PREPARATIONS 45**

Preparation of dimethylamino propiophenone hydrochloride by Monnicer reaction.  
Two-stage preparation of a few organic compounds. Phase transfer catalysis.  
Synthesis of azo dyes

**UNIT V IDENTIFICATION OF ORGANIC COMPOUNDS BY INSTRUMENTAL METHODS 30**

UV, IR, NMR, Mass spectroscopy and TGA

**TOTAL PERIODS 180**

**UNIT I COORDINATION COMPOUNDS 9**

Nomenclature; coordination geometry and isomerism – structural and stereoisomerisms; absolute configuration – ORD and CD spectra; stability of complexes – successive and overall formation constants - experimental methods – polarography and potentiometry- thermodynamic aspects,

**UNIT II THEORIES OF METAL LIGAND BOND 9**

Valence bond theory – hybridization; crystal field theory – crystal field splitting, crystal field stabilization energy – thermodynamic, structural, spectral and magnetic characteristics, Jahn-Teller effect, ligand field theory; molecular orbital theory – pi bonding

**UNIT III SPECTRA OF COORDINATION COMPOUNDS 9**

Spectral characteristics - Free ion terms, transformations in crystal field, energy diagrams in weak and strong field cases – Tanabe-Sugano diagrams, selection rules; magnetic properties – Van Vleck equation, magnetic susceptibility –Guoy and Faraday methods; ESR spectra of transition metal ions.

**UNIT IV REACTIONS OF COORDINATION COMPOUNDS 9**

Inert and labile complexes; substitution reactions in square-planar and octahedral complexes – factors affecting reactivities; electron transfer reactions- outer sphere and inner sphere mechanisms; photochemical reactions of coordination compounds – substitution, red-ox and rearrangement reactions

**UNIT V COMPARATIVE CHEMISTRY OF OXIDATION STATES OF D AND F BLOCK METALS 9**

Lanthanides – occurrence, isolation, lanthanide contraction, oxidation states, spectral and magnetic properties, coordination complexes; actinides- configuration, properties; nuclear reactions of uranium, thorium and plutonium- power generation by nuclear reactors, breeder reactor, fusion reaction, radioisotopes and their applications.

**UNIT I REARRANGEMENTS****10**

General mechanistic considerations - nature of migration - migratory aptitude - nucleophilic, electrophilic and free radical rearrangements - Wagner-Meerwein, McLafferty, Demyanov, Benzil-benzilic acid, Favorskii, Fritsch-Buttenberg-Wiechell, Neber, Hofmann, Curtius, Beckmann, Schmidt, Lossen, Wolff, Baeyer-Villiger, Dienone-phenol, Pinacol, Stevens, Wittig, Chapman, Wallach, Orton, Bamberger, Pummerer and von Richter rearrangements.

**UNIT II REAGENTS IN ORGANIC SYNTHESIS****11**

Diborane - lithium aluminium hydride - sodium borohydride - selenium-di-oxide - osmium tetroxide - phenyl isothiocyanate - N-bromo succinamide (NBS) - lead tetraacetate - dicyclohexylcarbodiimide (DCC) - pyridinium chlorochromate (PCC) - Swern oxidation - p-toluenesulphonyl chloride - trifluoroacetic acid - lithium diisopropylamide (LDA) - 1,3-dithiane (reactive umpolung) - crown ethers - trimethyl silyl iodide - Gilman reagent - dichlorodicyanobenzoquinone (DDQ) - lithium dimethylcuprate - tri-n-butyltin hydride - di-tert-butoxy dicarbonate - dihydropyran - phase transfer catalysts - Wilkinson's catalysts - Peterson synthesis - and diethylaluminium cyanide- IBX and Swern oxidations

**UNIT III MULTISTEP SYNTHESIS****7**

Concepts in multistep synthesis - strategies for retrosynthetic analysis, synthon and planning - functional group introduction - removal and interconversion - protective groups - hydroxyl, amino, carbonyl and carboxylic acid groups - retrosynthetic analysis - disconnections - synthons - synthetic equivalents - a,d synthons - C-C, C=C bond forming reactions - control of stereochemistry.

**UNIT IV HETEROCYCLICS AND ALKALOIDS****9**

Synthesis and reactivity of furan, thiophene, pyrrole, thiazole, pyridine, indole and their derivatives, quinoline, isoquinoline, pyrimidine, purine and flavone - Skraup synthesis - Fischer indole synthesis and Pachmann coumarin synthesis - alkaloids - sources and classification - structural elucidation by chemical degradation - total synthesis of quinine, morphine, reserpine, papaverine and nicotine.

**UNIT V PROTEINS AND NUCLEIC ACIDS****8**

Classification - structure and synthesis of amino acids – peptides – Merrifield solid phase peptide synthesis - structure determination - peptide sequence and synthesis of - primary, secondary, tertiary and quaternary structures- Merrifield solid phase peptide synthesis - nucleic acids - structure and synthesis of DNA - structure and synthesis of RNA-WC Model

**UNIT I FOUNDATION TO QUANTUM CHEMISTRY****8**

Inadequacy of classical mechanics- black body radiation, photo electric effect, heat capacity of solids- Planck's quantum theory - quantum mechanical operators- Hamiltonian operators, momentum operators, permutation operators – matrix representations – eigen value – eigen function equations.

**UNIT II QUANTUM CHEMISTRY OF ATOMS AND MOLECULES****10**

Schrodinger wave equation and its solution to a particle in a box, rigid rotor, harmonic oscillators – H-atom solutions – variation method – perturbation method – He atom - SCF & Hartree-Fock method. Born Oppenheimer approximation of  $H_2^+$  and  $H_2$ , Huckel theory of conjugated molecules

**UNIT III CATALYSIS****9**

Acid – base catalysis – general scheme – Arrhenius complex – Vant Hoff's complex – specific and general catalysis – catalytic constants – Bronsted relationship – Hammett acidity functions – mechanism of acid-base catalysed reaction - catalysis by transition metal ions and their complexes, supported transition metal complexes as catalysts – enzyme catalysis – theory and applications

**UNIT IV SURFACE PHENOMENA AND HETEROGENEOUS CATALYSIS****9**

Diffusion, adsorption – unimolecular and bimolecular surface reactions- types of - various adsorption isotherms – determination of surface area - pore volume and pore size – thermodynamics of interfaces - solid catalysts – metal - metal oxides, zeolites – geometric factor – electronic factor.

**UNIT V SOLID STATE****9**

Cyrstallography-optical crystallography, laws of crystal structures, crystal systems, crystal structure, X-Ray crystallography - X-Ray, neutron and electron diffraction, structure and types of crystalline solids, chemical bonding in solids- cohesive energies of solids-

**AC 9124 INTRODUCTORY PRINCIPLES OF CHEMICAL ENGINEERING****L T P C  
3 0 0 3****UNIT I CHEMICAL ENGINEERING CONCEPTS 9**

Stoichiometric principles – material and energy balances. Fluid flow – Bernoullis equation and its applications – pipes and fittings – Industrial pumps – flow through equipments.

**UNIT II HEAT AND MASS TRANSFER 9**

Fouriers law – simple numerical problems on conduction – natural and forced convection – heat transfer equipment –Drying - Different types of dryers-Distillation – vapour liquid equilibria –distillation methods – continuous rectification of binary systems – design method for theoretical plates – HETP concepts.

**UNIT III MASS TRANSFER OPERATIONS 9**

Adsorption and adsorption principles–equilibrium relationships–methods of calculation – various types of equipments. Extraction–liquid extraction–ternary diagram–selection of solvent and equipment–method of calculation for co-current and counter-current extraction operations Crystallization – types of crystallization equipment – material and energy balances.

**UNIT IV MECHANICAL OPERATIONS 9**

Laws of crushing – closed and open circuit grinding – various types of crushers and grinders – settling, floatation and filtration concepts.

**UNIT V UNIT PROCESSES 9**

Nitration, sulphonation, halogenation, esterification, amination, saponification and hydrogenation, role of the above unit processes in such industries as petroleum, drugs, pharmaceuticals and organic synthesis

**UNIT I QUANTITATIVE INORGANIC ANALYSIS 36**

- (i) Ores: oxides and carbonate ores
- (ii) Alloys: ferrous and nonferrous alloys-brass and solder
- (iii) Spectrophotometry- estimation of copper, nickel, iron and manganese

**UNIT II ESTIMATION OF INDUSTRIAL PRODUCTS 36**

- (i) Active CaO in lime
- (ii) Chlorine in bleaching powder
- (iii) Analysis of cement -silica, mixed oxide – Fe<sub>2</sub>O<sub>3</sub>, Al<sub>2</sub>O<sub>3</sub> & CaO/MgO
- (iv) Lead content in red lead
- (v) BaSO<sub>4</sub> in lithophone.

**UNIT III WATER ANALYSIS 36**

- (i) total dissolved solids
- (ii) carbonate and non-carbonate hardness by EDTA
- (iii) Dissolved oxygen, BOD, COD
- (iv) Alkalinity
- (v) F, Cl, SO<sub>4</sub><sup>2-</sup>, Fe<sup>3+</sup>
- (vi) Turbidity

**UNIT IV PREPARATION OF TYPICAL INORGANIC COMPLEXES 36****UNIT V QUALITATIVE INORGANIC SEMI-MICRO ANALYSIS 36**

Detection of atleast four cations (2 common and 2 uncommon) in a mixture of salts.

**TOTAL PERIODS 180**

**REFERENCES**

**UNIT I ORGANOMETALLIC COMPOUNDS 9**

18 electron rule: metal carbonyls, metal nitrosyls, metal alkyl and aryl and aryl complexes; preparation, structure, bonding, stereochemical non-rigidity; Metal – alkene, alkyne and allyl complexes, cyclopentadiene and benzene complexes – preparation, structure and bonding; catalysis by organometallic compounds- hydrogenation, hydroformylation, stereoregular polymerization, Wacker process.

**UNIT II BIO-INORGANIC CHEMISTRY 9**

Metals and non-metals in biological systems; metal ion transport; oxygen carriers- haemoglobin, myoglobin; metallo-enzymes – carboxypeptidase A, carbonic anhydrase, vitamins B<sub>12</sub>, nitrogenase; electron transfer and redox systems; photosynthesis.

**UNIT III BONDING AND MOLECULAR POLYHEDRA IN INORGANIC SOLIDS 9**

Boranes, borazines, silicates, phosphorous-nitrogen, sulphur-nitrogen compounds, metal atom clusters; inert gas compounds.

**UNIT IV INORGANIC SOLID STATE 9**

Preparation of non-molecular solids; band theory of solids; defects and non-stoichiometry, electrical and magnetic properties, superconductivity, amorphous solids, nanosolids.

**UNIT V PHOTOCHEMISTRY 9**

Photophysical processes, spontaneous and stimulated emission of radiation, chemical actinometry, solar energy conversion and applications.

**TOTAL PERIODS 45****REFERENCES**

**UNIT I PHOTOCHEMISTRY AND AROMATICITY 9**

Photochemistry –Jablonski diagram – photochemistry of olefins and carbonyl compounds - photo oxidation and reduction, cis – trans isomerism, Paterno – Buchi , Barton, Norrish type I and II reactions, di-pi- methane rearrangement. Aromaticity-concept – Huckel and Craig rules – NMR and X – ray diffraction as a tool – diatropy and paratropy. Aromatic and anti aromatic compounds. Benzenoid, non-benzenoid and homo aromatic compounds. Alternant and nonalternant hydrocarbons. Annulenes (discussion of spectral data ) - Aromaticity in ferrocenes, fullerenes, heterocyclic rings and charged ring systems.

**UNIT II PERICYCLIC REACTIONS 12**

Definition-electrocyclic, cycloaddition, sigmatropic and ene reactions. Woodward – Hoffmann rules – Frontier orbital, Mobius- Huckel and orbital symmetry correlation approaches. Stereospecificity and regioselectivity of pericyclic reactions - pericyclic reactions in organic synthesis. Diels –Alder reaction, 1,3 dipolar cycloaddition, Claisen, Cope, chelotropic reactions. Fluxional molecules.

**UNIT III TERPENOIDS 7**

Classification – isolation of terpenes – isoprene rule, methods of structural elucidation. Synthesis and structure of  $\alpha$  -Terpeniol, Camphor, car – 3 – ene, , zingiberene, santonin, abietic acid and  $\beta$  - caryophyllene.

**UNIT IV STEROIDS 8**

Structural elucidation and stereochemistry of cholesterol, ergosterol, estrone, testosterone, progesterone, and cortisone, bile acids and prostaglandins.

**UNIT V VITAMINS 9**

Structure and synthesis of vitamins A, B<sub>1</sub>, B<sub>2</sub>, B<sub>6</sub>, C, D, E and K

**UNIT I KINETICS****9**

Methods of determining rate laws – reversible, consecutive and competing reactions – theory of absolute reaction rates – transmission coefficient – quantum mechanical tunneling – thermodynamic formulation of reaction rates – kinetics – classical treatment – stochastic methods, principle of microscopic reversibility.

**UNIT II MECHANISM OF GAS PHASE REACTIONS****12**

Lindeman's theory - Hinshelwood, Kassel and Slater treatments – abnormal frequencies – ortho-para conversions – explosion limits – reaction rates in solution – effect of dielectric constant and ionic strength – kinetic isotope effect – linear free energy relationships – Hammett equation – Taft equation – fast reactions - study of kinetics by stopped flow techniques – flash photolysis – shock tubes.

**UNIT III STATISTICAL THERMODYNAMICS****8**

Objectives of statistical thermodynamics – probability – microstates and macrostates for distinguishable and indistinguishable particles – permutation and combinations – Maxwell – Boltzmann statistics - use of partition function for obtaining thermodynamic functions, entropy and third law.

**UNIT IV QUANTUM STATISTICS****7**

Molar partition functions – evaluation of translational, rotational, vibrational and electronic partition functions – rotational heat capacity for the hydrogen molecule. Quantum statistics – Fermi - Dirac and Bose – Einstein statistics

**UNIT V NON-EQUILIBRIUM THERMODYNAMICS****9**

Steady state – conservation of energy and mass-entropy production and entropy flow in open system – fluxes and forces – transformation of properties of rates and affinity – microscopic reversibility and Onsager reciprocal relation, thermokinetic effect.

**UNIT I ELECTROMAGNETIC RADIATION AND ROTATIONAL SPECTROSCOPY****9**

Characterization of electromagnetic radiation – regions of the spectrum-basic elements of practical spectroscopy–enhancement of spectra – Microwave spectroscopy – rotational spectra of molecules – applications.

**UNIT II ABSORPTION SPECTROSCOPY****12**

Applications of group theory, Infra-red spectroscopy - harmonic and anharmonic vibrations –dissociation energy of diatoms– vibrating rotator - PQR branches in IR spectra - Fermi resonance – Raman spectroscopy – mutual exclusion principle – UV–vis spectroscopy – electronic transitions – solvent effects – Woodward’s rule.

**UNIT III SPIN RESONANCE SPECTROSCOPY****12**

Proton magnetic resonance spectroscopy – relaxation processes – chemical shift – coupling – simplification of complex NMR spectra – <sup>13</sup>C NMR spectra - Electron spin resonance spectroscopy – hyperfine interactions.

**UNIT IV MASS SPECTROMETRY****7**

Reactions of ions in gas phase – effect of isotopes – nitrogen rule - determination of molecular formula - fragmentations and rearrangements - metastable ions – fragmentation of organic compounds.

**UNIT V MOSSBAUER SPECTROSCOPY****5**

Mossbauer nuclei – Doppler effect – isomer shift – quadrupole splitting – magnetic hyperfine interactions.

**UNIT I CONDUCTOMETRY****20**

Equivalent conductance of strong electrolytes and verification of Debye-Huckel-Onsager equation. Degree of hydrolysis of aniline hydrochloride. Basicity of an acid. Verification of Ostwald dilution law using weak acid and determination of its dissociation constant. Conductometric titrations – acid- base, mixed acid-base, precipitation titrations.

**UNIT II POTENTIOMETRY AND PH-METRY****20**

Emf measurement - Potentiometric titrations – red-ox and precipitation titrations; pH measurement, pH-metric titrations – acid-base reactions

**UNIT III KINETICS****20**

Determination of order - acetone-iodine reaction; Determination of rate constant-saponification of ethyl acetate; Study of primary salt effect on the kinetics of ionic reaction

**UNIT IV HETEROGENEOUS EQUILIBRIA****20**

Determination of CST in phenol-water system; Phase diagram of a ternary system-nitrobenzene-acetic acid-water or water- acetic acid-chloroform. Two component solid solutions – eutectic formation

**UNIT V THERMODYNAMICS****20**

Temperature dependence of solubility of benzoic acid in water and DMSO – water and calculation of partial molar heat of solution. Activity coefficients of weak or strong electrolyte by solubility method. Determination of activity coefficients of an electrolyte at different molalities.

**UNIT VI SPECTROPHOTOMETRIC AND FLAME PHOTOMETRIC METHODS****20**

Determination of molar absorptivity – verification of Beer-Lambert equation – Simultaneous estimation of Mn and Cr in solutions containing  $\text{KMnO}_4$  and  $\text{K}_2\text{Cr}_2\text{O}_7$ . Photometric titration of Fe(III) by EDTA; Estimation of Na/K by flame photometer.

**UNIT VII POLAROGRAPHY****20**

Determination of half-wave potential – quantitative estimation of Cd/Zn Determination of  $\text{Pb}^{2+}$  and  $\text{SO}_4^{2-}$  by amperometric titration

**UNIT VIII OPTICAL METHODS****20**

Polarimetry - Determination of sucrose content in cane sugar / cane juice Kinetics of hydrolysis of sucrose - effect of acid strength. Abbe's refractometer- Percentage composition of binary mixtures

## **UNIT IX MISCELLANEOUS**

**20**

Verification of Freundlich isotherm – adsorption of acetic acid, oxalic acid on carbon–, Relative and absolute viscosities - Molecular weight of a polymer by viscometry  
Demonstration experiments-TGA and DTA, Atomic absorption spectrometry, G.C, HPLC , TOC analyser , FT-IR spectrophotometer,  
X-Ray Diffraction and GPC

**UNIT I BASIC PRINCIPLES OF CHEMICAL TECHNOLOGY 9**

Classification of chemical technological processes – chemical equilibrium in technological processes - rates of technological processes – designing and modeling chemical technological processes and reactors .

**UNIT II INDUSTRIAL ORGANIC SYNTHESIS 9**

Raw materials - manufacture of methyl alcohol, ethyl alcohol, ethylene, 1,3-butadiene, acetylene – ethyl benzene, cumene, linear alkyl benzenes alkyl phenols.

**UNIT III SYNTHETIC ORGANIC CHEMICALS 9**

Chemicals derived from ethylene – polyethylene, ethylene oxide, ethylene dichloride chlorinated hydrocarbons – chemicals derived from propylene – isopropyl alcohol, polypropylene, acrylonitrile, propylene oxide – oxidation of butane – esters – maleic anhydride - acetone- ethyl methyl ketone - bisphenol - DDT - aniline.

**UNIT IV PHARMACEUTICALS AND PESTICIDES 9**

Introduction – manufacture - aspirin, phenobarbital, penicillin – malathion, parathion, naled.

**UNIT V DYES 9**

Classification - raw materials – intermediates - manufacture – azodyes – triphenylmethane dyes – xanthene dyes. Indigoid and thioindigoid dyes, sulphur dyes, phthalocyanines – optical brighteners.

**TOTAL PERIODS 45****REFERENCES**

**UNIT I FUEL AND INDUSTRIAL GASSES 9**

Fuel and industrial gases – production and uses of producer gas, water gas, coke oven gas, acetylene, natural gas, LPG: Liquefaction of gases– noble gases, carbon dioxide, hydrogen, oxygen, nitrogen.

**UNIT II HEAVY CHEMICALS 9**

Chloralkali industry – soda ash, caustic soda, chlorine: Chemicals from sea- sodium chloride, magnesium chloride, bromine

**UNIT III ACIDS AND FERTILIZERS 9**

Sulphur and sulphuric acid – nitric acid – ammonia –nitrogenous fertilizers – phosphorus – phosphoric acid – phosphatic fertilizers – potassic fertilizers

**UNIT IV SILICATE INDUSTRIES 9**

Silicate industries – refractories – abrasives – ceramics – glass – cement, lime, gypsum

**UNIT V PRINCIPLES OF METALLURGICAL PROCESSES 9**

Principles of metallurgical processes – ore beneficiation pyrometallurgy, hydrometallurgy powder metallurgy, electrometallurgy: Explosives and propellants: Nuclear materials.

**UNIT I BASIC CONCEPTS OF POLYMERS 11**

Basic concepts of polymers – classification of polymers – organic and inorganic polymers.- classification based on occurrence, end use, thermal properties and structure. Tacticity and its determination using  $^1\text{H}$  NMR. Crystalline and amorphous polymers – Factors affecting crystallinity and crystallisability. Effect of crystallinity on properties- Glass transition temperature and its determination.- thermal transitions- dilatometer-variation of specific volume of polymers with temperature- Factors affecting glass transition temperature.

**UNIT II CHAIN POLYMERISATION 9**

Kinetics and mechanism of free radical, cationic and anionic polymerization Trommsdorff's effect – chain transfer reactions and constants – living polymers – alfin catalysts — coordination polymerisation -Ziegler-Natta catalysts-iniferters -Atom transfer radical polymerization.

**UNIT III STEP GROWTH POLYMERISATION 9**

Kinetics of polycondensation reactions – copolymerization – co-polymer equation – copolymer compositions from  $^1\text{H}$ -NMR, FT-IR, UV spectra and chemical methods – Monomer reactivity ratios- Mayo-Lewis and Fineman-Ross methods- significance of reactivity ratios-Sequence length–Metathetical, Group transfer, Electrochemical and Ring-opening polymerisation

**UNIT IV POLYMERISATION TECHNIQUES 6**

Polymerisation techniques– homogeneous and heterogeneous polymerisation – bulk (liquid, gas and solid monomers), solution, suspension and emulsion polymerisation –merits and demerits –interfacial, and melt polycondensation.

**UNIT V MOLECULAR WEIGHT AND ITS DISTRIBUTION 10**

Number, weight and viscosity average molecular weights of polymers– determination of constants in Mark Houwink's equation. Poly dispersity index and molecular weight distribution – Molecular weight determination by GPC and viscometry; Polymer dissolution, thermodynamics of polymer dissolution –solubility parameter – Fractionation of polymers-fractional precipitation and fractional dissolution methods.

**UNIT I POLYMERIC MATERIALS****9**

Introduction – classification – thermoplastics - cellulose derivatives - LDPE, HDPE, PVC, PMMA, PTFE, PET, Nylons – thermosetting resins – phenolic resins, epoxy resins, silicones, polyurethanes – polymer blends and alloys reinforced plastics

**UNIT II ELASTOMERS****9**

Natural rubber – processing – vulcanization – synthetic rubber – SBR, neoprene, butyl, thiocol rubber – thermoplastic elastomers – high performance polymers – polyethers – PEEK, polysulphones, polyimides.

**UNIT III MOULDING TECHNIQUES****9**

Moulding constituents – functions –moulding techniques – compression – injection - extrusion – blow moulding – thermoforming – vacuum forming – pultrusion – casting – calendering – RIM – lamination

**UNIT IV CHARACTERISATION AND TESTING****9**

Characterisation of polymers by IR and NMR – Thermal properties by TGA and DSC, Testing tensile strength, Izod impact, Compressive strength, Rockwell hardness, Vicot softening point. Test for electrical resistance, dielectric constant, dissipation factor, arc resistance and dielectric strength – water absorption.

**UNIT V POLYMER PROPERTIES****9**

Effect of structure on mechanical, chemical, thermal, electrical and optical properties.

**TOTAL PERIODS 45****REFERENCES**

**UNIT I PROPERTIES OF TEXTILE MATERIALS 10**

Classification of textile fibres – chemical structure, physical and chemical properties of textile fibers – cotton, wool, silk, viscose, rayon, synthetic fibres.

**UNIT II PREPARATORY PROCESSES 10**

Brief outline on desizing, singeing and mercerisation, scouring – bleaching with hypochlorites and peroxides.

**UNIT III DYEING 15**

Theory of colours – dye chemistry - preparation of simple dyes and intermediates. Introduction to theory of dyeing. Application of direct, vat, azoic, reactive, sulphur, disperse and acid dyes and mineral colours.

**UNIT IV PRINTING 5**

Stages involved in printing –printing paste ingredients, styles and methods of printing. Outline on printing of cotton fabrics with reactive dyes, polyester fabrics with disperse dyes.

**UNIT V FINISHING 5**

Classification – calendering, crease proofing and shrink proofing.

**TOTAL PERIODS 45****REFERENCES**

1. R.Trotman, Dyeing and Chemical Technology of Textile Fibres, Charles Griffin and Co., Ltd., London (1985).

**UNIT I PREPARATORY PROCESSES 7**

Preparation to colouration and finishing of natural, manmade fibres and their blends – desizing, singeing, scouring, mercerizing and bleaching.

**UNIT II DYEING 11**

Theory of dyeing fundamentals involved in the theory of dyeing. Dyeing of various textile fibres and their blends – dyeing of cotton, wool, silk and man made fibres with direct, acid, basic, reactive, sulphur, vat, aryo, disperse dyes and other speical dyes

**UNIT III MACHINERY FOR PREPARATION AND DYEING 10**

Machines used for preparation and dyeing processes- singeing, mercerizing, scouring machines - bleaching ranges dyeing machines – jigger, winch padding ranges, HTHP machines, jet dyeing machines and overflow dyeing machines

**UNIT IV PRINTING & MACHINERIES 10**

Printing – methods and styles – direct, discharge and resist styles, block, roller and screen printing –transfer printing. Printing of various classes of dyes and pigments – printing of natural and synthetic materials with direct, reactive, disperse and other dyes – pigment printing. Printing machinery and post printing operations – roller printing machinery, hand, flat and rotatory screen printing machines – transfer printing machine – dryers, steamers, curing chambers and washing ranges.

**UNIT V FINISHING 7**

Finishing of textile materials – scutching, calendering, starching, creeping, anti-shrinking, crease-proofing, wool-finishing and other finishes.

**UNIT I CHEMISTRY AND THE ENVIRONMENT 7**

Chemistry and the environment - environmental pollution - causes - pollutants - air pollution - effects of air pollution: Environmental fate of pollutants - transformation process - bio concentration - fate of air, water and soil pollutants

**UNIT II BIOLOGICAL ACTIVITY 11**

Biological activity - biodegradation of carbohydrates, proteins, fats and oil, detergents, pesticides; Metabolic fate of pollutants - adsorption – distribution - metabolism - excretion.

**UNIT III TOXIC EFFECTS OF POLLUTANTS 9**

Toxic effects of pollutants - toxicity - carcinogenicity - mutagenicity- teratogenicity - biochemical effects of arsenic, cadmium, lead, mercury, carbon monoxide, nitrogen oxides, sulphur dioxide, ozone and pan, cyanide, pesticides, asbestos

**UNIT IV WATER POLLUTION 10**

Water pollution - water quality parameters - turbidity, colour, pH, acidity, alkalinity, solids, hardness, chlorides, residual chlorine, sulphates, fluorides, phosphates, iron and manganese, DO, BOD, COD, nitrogen, grease, volatile acids, gas analysis.

**UNIT V POLLUTION AND WASTEWATER TREATMENT 10**

Soil pollution - noise pollution - thermal pollution; Wastewater treatment – volume reduction - strength reduction - neutralisation - equalisation - proportioning - primary and secondary treatment - solid waste disposal.

**TOTAL PERIODS 45****REFERENCES**

**UNIT I REQUIREMENTS OF WATER AND PRELIMINARY TREATMENT 9**

Requirements of water – quality standards for drinking water – object of water treatment – conventional treatment – turbidity removal – cause of turbidity – coagulation – common coagulants – theory of coagulation – mixing basins – flocculation – principle and design of flocculators – sedimentation – settling tanks – settling velocity – surface loading rate – efficiency of settling tanks – sludge removal mechanism.

**UNIT II INDUSTRIAL WATER TREATMENT 9**

Filtration – size and shape characteristics of filtering media – sand filters hydraulics of filtration – design considerations – radial, upflow, highrate and multimedia filters, pressure filter. Water softening – lime soda, zeolite and demi mineralisation processes – industrial water treatment for boilers.

**UNIT III TREATMENT METHODS 9**

Taste and odour control – adsorption – activated carbon treatment – removal of colour – iron and manganese removal – aeration, oxidation, ion exchange and other methods – effects of fluorides – fluoridation and defluoridation – desalination – corrosion prevention and control – factors influencing corrosion – Langelier index – corrosion control measures.

**UNIT IV WASTEWATER TREATMENT 9**

Wastewater treatment – pre and primary treatment – equalization neutralisation – screening and grid removal – sedimentation – oil separation gas stripping of volatile organics – biological oxidation – lagoons and stabilisation basins – aerated lagoons – activated sludge process – trickling filtration – anaerobic decomposition.

**UNIT V ADSORPTION AND OXIDATION PROCESSES 9**

chemical process – adsorption – theory of adsorption – ion exchange process – chemical oxidation – advanced oxidation process – sludge handling and disposal – miscellaneous treatment processes.

**TOTAL PERIODS 45****REFERENCES**

**UNIT I SOLID WASTE 9**

Solid waste - definition – characteristics – perspectives - types of solid waste - sources - properties of solid waste - physical and chemical composition – changes in composition - solid waste management-materials flow - reduction in raw materials usages and solid waste quantities - reuse of solid waste materials

**UNIT II SOLID WASTE COLLECTION AND DISPOSAL 9**

Solid waste generation - on-site handling, storage and processing-collection of solid waste-transfer and transport-processing techniques - ultimate disposal

**UNIT III ENERGY RECOVERY 9**

Energy recovery - processing techniques-materials recovery systems – recovery of biological conversion products and thermal conversion products - materials and energy recovery system

**UNIT IV AIR POLLUTION 9**

Air pollution - global implication of air pollution-units of measurement - sources of pollutants - classification of pollutants - meteorology and natural purification processes - influence of meteorological phenomena on air quality-effects on man and vegetation. Effects of pollutants on human beings, animals, vegetation, buildings and materials

**UNIT V ANALYSIS AND CONTROL DEVICES 9**

Sampling and analysis - particulates and gaseous pollutants - methods for monitoring air pollutants - air quality control devices for particulate and gaseous contaminants-major polluting industries - measures to check industrial pollution.

**TOTAL PERIODS 45**

**UNIT I CHLORALKALI INDUSTRY****8**

General concepts of brine electrolysis – modern technological developments – chlorine cell technologies – mercury and diaphragm cell – membrane cell

**UNIT II ELECTROMETALLURGY****8**

Metal extraction and refining – electrowinning – aluminum extraction – manufacture of sodium, lithium and magnesium – hydrometallurgical processes – electrorefining – aqueous and molten salt electro refining

**UNIT III METAL FINISHING****12**

Pretreatment – conversion coatings – phosphating – types – methods – properties and influencing factors – evaluation and testing – applications – anodizing – principle – applications. Electroplating – objectives – theory – method – electroplating of nickel ( only ) – electroless plating – galvanizing – tinning

**UNIT IV ELECTROSYNTHESIS****9**

Electrolytic preparation of inorganic compounds – fluorine – peracids and their salts –  $\text{KMnO}_4$  --  $\text{K}_2\text{Cr}_2\text{O}_7$ . organic electrosynthesis – hydromerisation of acrylonitrile – Monsanto process – Manufacture of ethylene glycol – electrolysis of organic compounds with the use of ion – exchange membranes.

**UNIT V INDUSTRIAL ELECTROCHEMICAL PROCESSES****8**

Water treatment and environmental protection – metal ion removal and metal recovery – electro-filtration of particulates from gases – electrodialysis – desalination – electroflotation

**TOTAL PERIODS 45****REFERENCES**

**UNIT I CORROSION 9**

Causes and effects of corrosion – theories of corrosion - oxidation - direct atmospheric effect – electrochemical corrosion – hydrogen evolution- presence and absence of oxygen – corrosion by gaseous reduction.

**UNIT II FORMS OF CORROSION 9**

Galvanic bimetal corrosion – differential aeration corrosion - concentration cell corrosion – erosion corrosion – pitting corrosion – underground soil corrosion – intergranular corrosion - stress corrosion - seasonal cracking of alloys – caustic embrittlement – corrosion fatigue

**UNIT III CORROSION TESTING 8**

Rate of corrosion – calculation of  $\Delta G$  and other related thermodynamic parameters – potential measurement - electrochemical series – redox reactions – emf measurement and corrosion current - anodic and cathodic behaviour of metals – passivity – testing of virgin metals – alloy – Pourbaix and Evans diagrams.

**UNIT IV FACTORS INFLUENCING CORROSION 9**

Nature of metal – overvoltage – areas of anodic / cathodic – purity of metal - physical state of metals – passive nature of metal – solubility – volatility of corrosion products – corroding environment – influence of pH – ions – formations of cells – polarization of electrodes.

**UNIT V CORROSION CONTROL 10**

Design – selection of materials – pure metals and alloys – annealing – elimination of galvanic action – cathodic protection – sacrificial anodic protection – impressed current cathodic protection – modification of environment – deaeration – dehumidification – inhibitors - protective coatings - preparation of materials for coating – metallic and non metallic – organic coatings – special paints – varnish, enamel and lacquers.

**AC 9162 CHEMICAL PROCESS EQUIPMENT AND INSTRUMENTATION**

**L T P C**  
**3 0 0 3**

**UNIT I CHEMICAL REACTOR 9**

Chemical reactors – Batch reactor – Flow reactor –Fixed bed, Fluidised bed and slurry reactor – fluid moving machinery – pumps – blowers – compressors.

**UNIT II PROCESS EQUIPMENT 9**

Storage vessels – humidification –cooling towers. Agitation – Mixing – Industrial driers, crystallisers, absorbers. Extractors – Absorbers –Distillation – Extractive distillation, H.T.equipment, furnaces, heaters

**UNIT III MEASURING DEVICES 9**

Industrial measurement of temperature –pressure – level – flow – humidity –density – pH – characteristics of measuring devices – concepts of automatic control recorders.

**UNIT IV PHYSICAL PROPERTIES 9**

Measurement of physical parameters like surface tension –viscosity – melting point – Boiling point – optical rotation – Refractive Index – Thermal properties – molecular wt determination.

**UNIT V COMPUTER INSTRUMENTATION 9**

Elements of analogue and digital computers – computer instrumentation interfacing – microprocessor – controlled instruments – outlines of on-line and automatic analysers.

**UNIT I CELL STRUCTURE AND FUNCTION 9**

Cell structure and function: Molecular logic of living matter, Origin of biomolecules, cell structure – structure of prokaryotic and eukaryotic cells, intracellular organelles and their functions, comparison of plant and animal cells.

**UNIT II INTRODUCTION TO BIOMOLECULES 9**

Introduction to biomolecules: Examples of biomolecules, Building blocks of biomacromolecules, Nature of biomolecular interactions. Types of reactions occurring in cells.

**UNIT III PROTEINS, NUCLEOSIDES AND NUCLEIC ACIDS 9**

Proteins, Nucleosides and nucleic acids: Primary structure of proteins, End group determination, Secondary structure of proteins tertiary structure, oligomeric proteins, ribonucleotides and deoxyribonucleotides, RNA and DNA, Base pairing, double helical structure of DNA and genetic code, transcription, Ribosomes.

**UNIT IV ENZYMES LIPIDS AND MEMBRANES 9**

Enzymes Lipids and membranes: Enzymes categorization catalysis, kinetics –single substrate enzyme catalysed reactions, Inhibition, common class of lipids, self association of lipids, Formation of micelles, membranes, bilayer and hexagonal phases. Membrane bound proteins structure, properties and transport phenomena.

**UNIT V BIOENERGETICS 9**

Bioenergetics: Basic principles, glycolytic pathways, kreb's cycle, oxidative phosphorylation, hydrolysis of esters and amides,  $C-C$  and  $C=C$  bond formation, oxidation, reduction, Decarboxylation, Biomimetic reactions, Drug design.

**UNIT I BIOPROCESS PRINCIPLES 10**

Bioprocess principles – components and objectives; microorganisms – bacteria, yeasts and molds, animal and plant cells – cell structure, biomolecules, cellular organisation, metabolic processes, stoichiometry and energetics elementary aspects of molecular genetics.]

**UNIT II ENZYME TECHNOLOGY 8**

Enzyme technology – classification of enzymes, enzyme activity; kinetics of enzyme catalysis; modulation and regulation; immobilization of enzymes; applied enzyme catalysis.

**UNIT III MICROBIAL PROCESSES 8**

Microbial processes – bacterial and yeast strains for industrial processes; fermentation – aerobic and anaerobic fermentation; fundamentals of bioreactors–types – batch, fed-batch and CSTR; substrate utilization, product formation and biomass production.

**UNIT IV PRODUCT RECOVERY AND PURIFICATION OPERATIONS 9**

Product recovery and purification operations–principles of filtration, centrifugation, cell disruption, extraction, adsorption, precipitation, membrane separation, chromatographic and affinity technique.

**UNIT V BIOPROCESSES AND ENZYME TECHNOLOGY IN INDUSTRIES 10**

Bioprocesses and enzyme technology in industries – fuel generation ethanol and methane production; industrial enzymes; food production and processing – SCP, fermented foods, beverages, dairy products, vegetable and fruit products - pharmaceuticals – antibiotics and monoclonal antibodies.

2. BIOTOL (Biotechnology by Open Learning) A series of books (Butter worths J.E.Smith, Biotechnology Principles, Van Nostrand (1985).

**UNIT I INTRODUCTION TO DRUG DESIGN 9**

Factors governing drug design – Advantages - types of drug-lit survey for prep of drugs - characterisation /structural elucidation of drugs using diff. Spectral methods. Analgesics – Narcotic analgesics –morphine analogues – synthesis of codeine – Synthetic narcotic analgesics – synthesis and use of pethidines, methadones, dextropropoxyfene- narcotic antagonists – nalorphine – naloxone – Antipyretic analgeics – salicylic acid analogues – methyl salicylate, phenyl salicylate – paraamino phenol derivatives – structure synthesis and use of paracetamol, phenacetin, aspirin and salol

**UNIT II ANTIHISTAMINES AND ANTIMALARIALS 9**

Antihistamines – classification H1 & H2 receptor antagonists – structure, synthesis and their action & use of Diphenhydramine, cyclizinc, chlorpheniraminemaleate, Promethazine, Antimalarials classification – Quinine-4-aminoand 8-amino quinolines – chloroquine phosphate-Pyrimidines –Acidines; Sedatives – Barbiturates – structure, synthesis, action & use of Phenobarbitol-Benzodiazepines – mode of action structure and synthesios of Diazepam, Nitrazepam

**UNIT III ANTIBIOTICS AND ANTIBACTERIALS 9**

Antibiotics - penicillin, D-pencillamine, Phenoxy methyl pencillin –chloramphenicol-Antibacterials - norfloxacin, ciprofloxacin, Trimethoprim sulphadruugs – mode of action – preparation of sulphanilamide, sulphadiazine, sulphathiazole, sulphapyridine, sulphadimidine, sulphagauidine, sulphamethoxazole Antifungals – action, use and synthesis of clotrimazole, micronazole, Isoconazole.

**UNIT IV ANTIHYPERTENSIVE AND ANTITUBERCULAR DRUGS 9**

Antihypertensive drugs– synthesis and mode of action of methyldopa, pargyline, bertyline, hydralazine, propranolol- Antitubercular drugs – synthesis of PAS, ethambutol – pyrazinamide, isoniazid-

**UNIT V ANTIDIARRHEAL AGENTS 9**

Antitussives and antineoplastic drugs, antidiarrheal agents – cimetidine, domperidone, loperamide; Expectorants – antitussives – guaiphenesin, ambroxal, bromohexine, dextromethorphan, Antineoplastic drugs - alkylating agents –nitrogen mustards – sulphonic acid esters -

**UNIT I CATALYSTS PREPARATION AND STRUCTURAL ASPECTS 9**

Catalysts Preparation: Zeolite Y, Beta, ZSM-5, AIPO-5, 11, MCM- 4l, Mesoporous AIPO's, Super acids, Supported catalysts, perovskites and spinels.

**UNIT II CATALYSTS CHARACTERIZATION TECHNIQUES 12**

Physical characterization – shapes; XRD, FTIR, SEM, TEM, AES, ESCA, BET, Si-Al-MAS NMR, DTA, TPD, TPR, ESR, DRUV

**UNIT III HOMOGENEOUS AND HETEROGENEOUS CATALYSIS 9**

Conversion, selectivity, contact time, time on stream, Kinetics of heterogeneous catalysis, adsorption, phase transfer catalysis, super acid catalysis, intramolecular catalysis, enzyme catalysis, semi-conductor catalysis and photocatalysis. Promoters, stabilizers, catalyst deactivation by poisoning, fouling and sintering,

**UNIT IV OPERATING CATALYTIC PROCESS 6**

Mechanism of performing mass and heat balance, reactors – batch reactor, flow reactor and fluidised bed reactor - plug-flow and back - mixed reactors, isothermal and adiabatic reactors

**UNIT V INDUSTRIAL CATALYTIC PROCESSES 9**

Cracking, reforming, alkylation, isomerization, hydrogenation / dehydrogenation, dehydrocyclisation, dehydrosulphurization, hydrocracking, oxidation, metathesis, carbonylation, polymerization, synthetic fuels, hydrogen generation.

**UNIT I INTRODUCTION TO COMPUTERS 7**

Binary System - Processor – Storage devices – I/O devices – Introduction to operation systems – DOS, WINDOWS and Unix – Algorithms – Flow charts - Introduction to e mail and internet – world wide web.

**UNIT II NUMERICAL METHODS 7**

Roots of equations – Bisection method – Newton-Raphson method- Curve fitting – Principle of Least squares – Correlation and Regression Analysis – Sample distributions, Students' t distribution.

**UNIT III BASIC PROGRAMMING 11**

Introduction – I/P & Read statements, Library functions, Statements – if-then, if-then-else, go-to, for-to-next, for-to-next-step, for-to-next-loops, One dimensional and two dimensional arrays – writing simple programs for applications in chemistry.

**UNIT IV C PROGRAMMING 11**

Fundamentals and input/output statements: Constants – Variables- Data types- Operators – standard input output functions. Control structures: The decision control structure-The loop control structure- The case control structure. Functions: assessing a function - multidimensional arrays – pointer declarations – passing pointers to a fuction – operations on pointers.

**UNIT V APPLICATIONS of C PROGRAMMING 9**

Applications of C Programming to Simple Chemistry problems. Determination of rate constants of 1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup> order reactions- consecutive, parallel and equilibrium reactions - enzyme catalysed reactions- Reactivity ratios in copolymerization- determination of spectroscopic data and error analysis - simple quantum chemical calculation for simple molecules.

**UNIT I****9**

Nanotechnology – scope and emerging trends - bottom-up and top-down approaches; chemistry of solid surfaces – surface energy – chemical potential of curved surfaces; stabilization of colloidal dispersions by electrostatic and steric interactions; different types of nano materials.

**UNIT II****9**

General methods of synthesis of zero-dimensional nano particles – homogeneous nucleation and heterogeneous nucleation, growth of nuclei and factors of importance; synthesis of metallic, semiconductor and metal oxide nano particles;

**UNIT III****9**

Nanotubes - carbon nanotubes – synthetic methods for single walled and multi walled nanotubes; physical properties- optical, mechanical, magnetic and electrical properties, quantum size effects, structural characterization by scanning electron microscopy, x-ray diffraction and Raman spectroscopy. Inorganic nanotubes – synthesis and properties.

**UNIT IV****9**

One-dimensional Nanowires and nanorods, two-dimensional thin films, nano composites and nano-structured polymers, nano catalysts, nano clusters – preparation and properties

**UNIT V****9**

Physical techniques for fabrication of nanostructures – photolithography, electron beam lithography and related techniques– nanolithography by scanning tunneling microscopy and atomic force microscopy; assembly of nano particles and nanowires. Applications of nano materials in electronic and optoelectronic devices
