MA 9107 APPLIED MATHEMATICS FOR THERMAL ENGINEERS**L T P C**
3 1 0 4**UNIT I APPLICATIONS OF FOURIER TRANSFORM 9**

Fourier Transform methods – one-dimensional heat conduction problems in infinite and semi-infinite rod – Laplace Equation – Poisson Equation.

UNIT II CALCULUS OF VARIATIONS 9

Concept of variation and its properties – Euler's equation – Functionals dependant on first and higher order derivatives – Functionals dependant on functions of several independent variables – Variational problems with moving boundaries – Direct methods – Ritz and Kantorovich methods.

UNIT III CONFORMAL MAPPING AND APPLICATIONS 9

The Schwarz- Christoffel transformation – Transformation of boundaries in parametric form – Physical applications: Fluid flow and heat flow problems.

UNIT IV FINITE DIFFERENCE METHODS FOR PARABOLIC EQUATIONS 9

One dimensional parabolic equation – Explicit and Crank-Nicolson Schemes – Thomas Algorithm – Weighted average approximation – Dirichlet and Neumann conditions – Two dimensional parabolic equations – ADI method.

UNIT V FINITE DIFFERENCE METHODS FOR ELLIPTIC EQUATIONS 9

Solutions of Laplace and Poisson equations in a rectangular region – Finite difference in polar coordinates – Formulae for derivatives near a curved boundary while using a square mesh.

ADVANCED HEAT TRANSFER

L T P C
3 1 0 4

AIM:

The course is intended to build up necessary fundamentals for the understanding of the physical behaviour of conduction and convection

OBJECTIVE:

- To develop the ability to use the heat transfer concepts for various applications like finned systems, turbulence flows, high speed flows.
- To analyse the thermal analysis and sizing of heat exchangers and to learn the heat transfer coefficient for compact heat exchanges.
- To achieve an understanding of the basic concepts of phase change processes and mass transfer.

UNIT I CONDUCTION AND RADIATION HEAT TRANSFER 10

One dimensional energy equations and boundary condition - three-dimensional heat conduction equations - extended surface heat transfer - conduction with moving boundaries - radiation in gases and vapour. Gas radiation and radiation heat transfer in enclosures containing absorbing and emitting media – interaction of radiation with conduction and convection.

UNIT II TURBULENT FORCED CONVECTIVE HEAT TRANSFER 10

Momentum and energy equations - turbulent boundary layer heat transfer - mixing length concept - turbulence model – $k-\epsilon$ model - analogy between heat and momentum transfer – Reynolds, Colburn, Prandtl turbulent flow in a tube - high speed flows.

UNIT III PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGER 8

Condensation with shears edge on bank of tubes - boiling – pool and flow boiling - heat exchanger ϵ – NTU approach and design procedure - compact heat exchangers.

UNIT IV NUMERICAL METHODS IN HEAT TRANSFER 9

Finite difference formulation of steady and transient heat conduction problems – discretization schemes – explicit - Crank Nicolson and fully implicit schemes - control volume formulation -steady one-dimensional convection and diffusion problems - calculation of the flow field – SIMPLER Algorithm.

UNIT V MASS TRANSFER AND ENGINE HEAT TRANSFER CORRELATION 8

Mass transfer - vaporization of droplets - combined heat and mass transfers - heat transfer correlations in various applications like I.C. engines - compressors and turbines.

TOTAL (L – 45 + T – 15): 60 PERIODS

TEXT BOOKS:

1. Incropera F.P. and DeWitt. D.P., Fundamentals of Heat & Mass Transfer, John Wiley & Sons, 2002.

IC9112 ADVANCED THERMODYNAMICS

L T P C
3 1 0 4

UNIT I AVAILABILITY ANALYSIS AND THERMODYNAMIC PROPERTY RELATIONS 10

Reversible work - availability - irreversibility and second – law efficiency for a closed system and steady – state control volume. Availability analysis of simple cycles. Thermodynamic potentials. Maxwell relations. Generalized relations for changes in entropy - internal energy and enthalpy - generalized relations for C_p and C_v Clausius Clayperon equation, Joule – Thomson coefficient. Bridgeman tables for thermodynamic relations.

UNIT II REAL GAS BEHAVIOUR AND MULTI – COMPONENT SYSTEMS 10

Different equations of state – fugacity – compressibility - principle of corresponding States - Use of generalized charts for enthalpy and entropy departure - fugacity coefficient, Lee – Kesler generalized three parameter tables. Fundamental property relations for systems of variable composition. Partial molar properties. Real gas mixtures - Ideal solution of real gases and liquid - activity - equilibrium in multi phase systems - Gibbs phase rule for non – reactive components.

UNIT III CHEMICAL THERMODYNAMICS AND EQUILIBRIUM 10

Thermochemistry - First law analysis of reacting systems - Adiabatic flame temperature - entropy change of reacting systems - Second law analysis of reacting systems - Criterion for reaction equilibrium. Equilibrium constant for gaseous mixtures - evaluation of equilibrium composition.

UNIT IV STATISTICAL THERMODYNAMICS 8

Microstates and Macrostates - thermodynamic probability - degeneracy of energy levels - Maxwell – Boltzman, Fermi – Dirac and Bose – Einstein statistics - microscopic interpretation of heat and work, evaluation of entropy, partition function, calculation of the Macroscopic properties from partition functions.

UNIT V IRREVERSIBLE THERMODYNAMICS 7

Conjugate fluxes and forces - entropy production Onsager's reciprocity relations - thermo – electric phenomena, formulations.

TOTAL (L – 45 + T – 15): 60 PERIODS

EY9111 COMBUSTION ENGINEERING

**L T P C
3 0 0 3**

AIM:

To introduce the types, characterization and properties of fuel. Also to discuss the principles of combustion with emphasis on engineering applications.

OBJECTIVE:

- To provide information on various types of fuels, their property and characterization.
- To understand the thermodynamics and kinetics of combustion.
- To understand and analyze the combustion of various fuels.

UNIT I INTRODUCTION

9

Historical perspective of combustion science - perspective of fuels and combustion technology. Types and general characteristics of fuels - proximate and ultimate analysis of fuels. ROM, DMMF, DAF and bone dry basis. Moisture and heating value determination - gross and net heating values – calorimetry. DuLong's formula for HV estimation. Flue gas analysis - Orsat apparatus.

UNIT II FUEL TYPES

9

Solid fuels:

Peat – coal - biomass - wood waste - agro fuels - refuse derived solid fuel -testing of solid fuels. Bulk and apparent density - storage - washability - coking and caking coals.

Liquid fuels:

Refining - molecular structure - liquid fuel types and their characteristics - fuel quality. Liquefaction of solid fuels.

Gaseous Fuels:

Classification and characterization.

UNIT III THERMODYNAMICS AND KINETICS OF COMBUSTION

9

Properties of mixture - combustion stoichiometry - chemical energy - chemical equilibrium and criteria - properties of combustion products. First law combustion calculations - adiabatic flame temperature (analytical and graphical methods) – simple second law analysis. Elementary reactions - chain reactions – pre-ignition kinetics - global reactions - kinetics - reaction at solid surface.

UNIT – IV COMBUSTION OF SOLID FUELS 8

Drying - devolatilization - char combustion. Fixed bed combustion - suspension burning - fluidized bed combustion.

UNIT – V COMBUSTION OF LIQUID AND GASEOUS FUELS 10

Spray formation and droplet behaviour - oil fired furnace combustion - gas turbine spray combustion – direct and indirect Injection combustion in IC engines. Energy balance and furnace efficiency – gas burner types - pulse combustion furnace. Premixed charge engine combustion. Detonation of gaseous mixtures.

PERIODS TOTAL: 45

TEXT BOOKS:

1. Kuo, K.K., Principles of Combustion, 2nd Edition, John Wiley and Sons, Inc., 2005.
2. Annamalai, K and Puri, I.K, Combustion science and Engineering, CRC Press, 2007.

REFERENCES:

1. Borman, G.L. and Ragland, K.W., Combustion Engineering, McGrawHill International Editions, 1998.
2. Samir Sarkar, Fuels and Combustion, 2nd Edition, Orient Longman, 1990
3. Sharma SP and Mohan Chander, Fuels and Combustion, Tata Mcgraw Hill, 1984.
4. Bhatt, B.I and Vora, S.M., Stoichiometry, 2nd Edition, Tata Mcgraw Hill, 1996
5. Clive Davis, Calculations in Furnace Technology, Pergamon Press, Oxford, 1970.

AIM:

This course is intended to introduce principles of energy auditing and to provide measures for energy conservation in thermal applications

OBJECTIVES:

- To learn the present energy scenario and the need for energy conservation
- To learn the instruments suitable for energy auditing
- To study the various measures for energy conservation and financial implications for various thermal utilities

UNIT I INTRODUCTION 10

Energy Scenario - world and India. Energy Resources Availability in India. Energy consumption pattern. Energy conservation potential in various Industries and commercial establishments. Energy intensive industries - an overview. Energy conservation and energy efficiency – needs and advantages. Energy auditing - types, methodologies, barriers. Role of energy manager – Energy audit questionnaire - energy Conservation Act 2003

UNIT II INSTRUMENTS FOR ENERGY AUDITING 8

Instrument characteristics – sensitivity, readability, accuracy, precision, hysteresis. Error and calibration. Measurement of flow, velocity, pressure, temperature, speed, Lux, power and humidity. Analysis of stack, water quality, power and fuel quality.

UNIT III THERMAL UTILITIES: OPERATION AND ENERGY CONSERVATION 10

- (i) Boilers (ii) Thermic Fluid Heaters (iii) Furnaces
(iv) Waste Heat Recovery Systems (v) Thermal Storage

UNIT IV THERMAL ENERGY TRANSMISSION / PROTECTION SYSTEMS 7

Steam traps– refractories – optimum insulation thickness– insulation – piping design

UNIT V FINANCIAL MANAGEMENT 10

Investment - need, appraisal and criteria, financial analysis techniques - break even analysis- simple pay back period, return on investment, net present value, internal rate of return, cash flows, DSCR, financing options, ESCO concept.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Smith, CB Energy Management Principles, Pergamon Press, New York, 1981
2. Hamies, Energy Auditing and Conservation; Methods Measurements, Management and Case study, Hemisphere, Washington, 1980

EY9113 ENERGY LABORATORY

L T P C
3 0 0 3
18

RENEWABLE ENERGY

1. Performance testing of Solar Water Collector
2. Characteristics of Solar photovoltaic devices
3. Testing of Gasifier
4. Testing of biogas plant
5. Properties of Fuels
6. Solar Radiation measurement

ENERGY CONSERVATION

18

1. Boiler efficiency testing
2. Motor and Pump efficiency testing
3. Energy consumption measurement of lighting systems
4. VFD Drives
5. Heat Exchangers
6. Refrigeration and Air conditioning systems

ADVANCED ENERGY SYSTEMS

9

1. Fuel Cell
2. Earth Energy
3. Thermal Storage Systems

EQUIPMENTS REQUIRED

1. Solar water heater – 100 LPD
2. SPV Educational Kit
3. 20 kW_e gasifier
4. Biogas plant (fixed dome or floating drum)
5. Bomb calorimeter
6. Junker's gas calorimeter
7. Hydrometer
8. Flash and fire point apparatus
9. Proximate analyser (Muffle furnace and micro weigh balance)
10. Solar Radiation Meters
11. Non-IBR boiler

12. 5 HP motor efficiency test rig
13. Pump efficiency test rig
14. VFD coupled to a varying load device
15. Heat Exchangers (plate, pipe-in-pipe, shell and tube)
16. Vapour Compression Refrigeration Test Rig
17. Fuel cell – Educational Kit
18. PCM based energy storage system

TOTAL: 45 PERIODS

EY9122

RENEWABLE ENERGY SYSTEMS

L T P C
3 0 0 3

AIM:

To understand types and applications of various form of renewable energy and its environmental impacts.

OBJECTIVES:

- To explain concept of various forms of renewable energy
- To outline division aspects and utilization of renewable energy sources for both domestics and industrial applications
- To analysis the environmental and cost economics of using renewable energy sources compared to fossil fuels.

UNIT I SOLAR ENERGY 9

Solar radiation its measurements and prediction - solar thermal flat plate collectors concentrating collectors – applications - heating, cooling, desalination, power generation, drying, cooking etc - principle of photovoltaic conversion of solar energy, types of solar cells and fabrication. Photovoltaic applications: battery charger, domestic lighting, street lighting, and water pumping, power generation schemes.

UNIT II WIND ENERGY 9

Atmospheric circulations – classification - factors influencing wind - wind shear – turbulence - wind speed monitoring - Betz limit - Aerodynamics of wind turbine rotor-site selection - wind resource assessment - wind energy conversion devices - classification, characteristics, applications. Hybrid systems - safety and environmental aspects.

UNIT III BIO-ENERGY 9

Biomass resources and their classification - chemical constituents and physicochemical characteristics of biomass - Biomass conversion processes - Thermo chemical conversion: direct combustion, gasification, pyrolysis and liquefaction - biochemical conversion: anaerobic digestion, alcohol production from biomass - chemical conversion process: hydrolysis and hydrogenation. Biogas - generation - types of biogas Plants- applications

UNIT IV HYDROGEN AND FUEL CELLS 9

Thermodynamics and electrochemical principles - basic design, types, and applications - production methods - Biophotolysis: Hydrogen generation from algae biological pathways - Storage gaseous, cryogenic and metal hydride and transportation. Fuel cell – principle of working- various types - construction and applications.

UNIT V OTHER TYPES OF ENERGY 9

Ocean energy resources - principles of ocean thermal energy conversion systems - ocean thermal power plants - principles of ocean wave energy conversion and tidal energy conversion – hydropower – site selection, construction, environmental issues - geothermal energy - types of geothermal energy sites, site selection, and geothermal power plants.

IC 9123 INSTRUMENTATION FOR THERMAL SYSTEMS**L T P C
3 0 0 3****UNIT I MEASUREMENT CHARACTERISTICS 12**

Instrument classification - characteristics of instruments – static and dynamic experimental error analysis - systematic and random errors - statistical analysis – uncertainty - experimental planning and selection of measuring instruments - reliability of instruments

UNIT II MICROPROCESSORS AND COMPUTERS IN MEASUREMENT 5

Data logging and acquisition use of sensors for error reduction elements of micro – computer interfacing - intelligent instruments in use.

UNIT III MEASUREMENT OF PHYSICAL QUANTITIES 10

Measurement of thermo – physical properties, instruments for measuring temperature - pressure and flow - use of sensors for physical variables

UNIT IV ADVANCE MEASUREMENT TECHNIQUES 8

Shadow graph – Schlieren – interferometer - Laser doppler anemometer - hot wire anemometer, heat flux sensors - telemetry in measurement.

UNIT V MEASUREMENT ANALYSERS 10

Orsat apparatus - gas analysers - smoke meters - gas chromatography - spectrometry

EY9150 ADVANCED ENGINEERING FLUID MECHANICS L T P C
3 0 0 3

AIM:

To introduce the advanced concepts of fluid mechanics and aerodynamics with the emphasis on practical applications.

OBJECTIVES:

- To understand the laws of fluid flow for ideal and viscous fluids.
- To represent the real solid shapes by suitable flow patterns and to analyze the same for aerodynamics performances.
- To understand the changes in properties in compressible flow and shock expansion.

UNIT I BASIC EQUATIONS OF FLOW 6

Three dimensional continuity equation - differential and integral forms – equations of motion momentum and energy and their engineering applications.

UNIT II POTENTIAL FLOW THEORY 12

Rotational and irrotational flows - circulation – vorticity - stream and potential functions for standard flows and combined flows – representation of solid bodies by flow patterns. Pressure distribution over stationary and rotating cylinders in a uniform flow - magnus effect - Kutta – Zhukovsky theorem. Complex potential functions. Conformal transformation to analyze the flow over flat plate, cylinder, oval body and airfoils. Thin airfoil theory – generalized airfoil theory for cambered and flapped airfoils.

UNIT III VISCOUS FLOW THEORY 9

Laminar and turbulent Flow - laminar flow between parallel plates - Poiseuille's equation for flow through circular pipes. Turbulent flow - Darcy Weisbach equation for flow through circular pipe - friction factor - smooth and rough Pipes - Moody diagram – losses during flow through pipes. Pipes in series and parallel – transmission of power through pipes.

UNIT IV BOUNDARY LAYER CONCEPT 9

Boundary Layer - displacement and momentum thickness - laminar and turbulent boundary layers in flat plates - velocity distribution in turbulent flows in smooth and rough boundaries - laminar sub layer.

UNIT- V COMPRESSIBLE FLUID FLOW**9**

One dimensional compressible fluid flow – flow through variable area passage – nozzles and diffusers – fundamentals of supersonics – normal and oblique shock waves and calculation of flow and fluid properties over solid bodies (like flat plate, wedge, diamond) using gas tables

TOTAL: 45 PERIODS**TEXT BOOKS:**

EY9151 COGENERATION AND WASTE HEAT RECOVERY SYSTEMS

L	T	P	C
3	0	0	3

AIM:

To detail on the importance of Total Energy Concept, its advantages and cost effectiveness

OBJECTIVE:

- To analyze the basic energy generation cycles
- To detail about the concept of cogeneration, its types and probable areas of applications
- To study the significance of waste heat recovery systems and carryout its economic analysis

UNIT I INTRODUCTION**9**

Introduction - principles of thermodynamics – cycles - topping - bottoming – combined cycle - organic rankine cycles – performance indices of cogeneration systems – waste heat recovery – sources and types – concept of tri generation.

UNIT II COGENERATION TECHNOLOGIES**9**

Configuration and thermodynamic performance – steam turbine cogeneration systems – gas turbine cogeneration systems – reciprocating IC engines cogeneration systems – combined cycles cogeneration systems – advanced cogeneration systems: fuel cell, Stirling engines etc.,

UNIT III ISSUES AND APPLICATIONS OF COGENERATION TECHNOLOGIES 9

Cogeneration plants electrical interconnection issues – utility and cogeneration plant interconnection issues – applications of cogeneration in utility sector – industrial sector – building sector – rural sector – impacts of cogeneration plants – fuel, electricity and environment

UNIT IV WASTE HEAT RECOVERY SYSTEMS 9

selection criteria for waste heat recovery technologies - recuperators - Regenerators - economizers - plate heat exchangers - thermic fluid heaters - Waste heat boilers-classification, location, service conditions, design Considerations - fluidized bed heat exchangers - heat pipe exchangers - heat pumps – sorption systems.

UNIT V ECONOMIC ANALYSIS 9

Investment cost – economic concepts – measures of economic performance – procedure for economic analysis – examples – procedure for optimized system selection and design – load curves - sensitivity analysis – regulatory and financial frame work for cogeneration and waste heat recovery systems.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Horlock JH, Cogeneration - Heat and Power, Thermodynamics and Economics, Oxford, 1987.
2. Institute of Fuel, London, Waste Heat Recovery, Chapman and Hall Publishers, London, 1963

REFERENCES:

1. Charles H. Butler, Cogeneration, McGraw Hill Book Co., 1984.
2. EDUCOGEN – The European Educational tool for cogeneration, Second Edition, 2001
3. Sengupta Subrata, Lee SS EDS, Waste Heat Utilization and Management, Hemisphere, Washington, 1983.
4. De Nevers, Noel, Air Pollution Control Engineering, McGrawHill, New York, 1995.

AIM:

To provide a comprehensive and rigorous introduction to energy system design and optimization from a contemporary perspective.

OBJECTIVES:

- To learn to apply mass and energy balances for the systems enable to perform enthalpy
- Learn to calculate to size performance and cost of energy equipments turns modeling and simulation techniques.
- Learn to optimize the energy system for its maximum or minimum performance output.

UNIT I INTRODUCTION 9

Primary energy analysis - dead states and energy components - energy balance for closed and control volume systems - applications of energy analysis for selected energy system design - modeling overview - levels and steps in model development - examples of models – curve fitting and regression analysis.

UNIT II MODELLING AND SYSTEMS SIMULATION 9

Modeling of energy systems – heat exchanger - solar collectors – distillation - rectification turbo machinery components - refrigeration systems - information flow diagram - solution of set of non- linear algebraic equations - successive substitution - Newton Raphson method- examples of energy systems simulation.

UNIT III OPTIMISATION TECHNIQUES 9

Objectives - constraints, problem formulation - unconstrained problems - necessary and sufficiency conditions. Constrained optimization - lagrange multipliers, constrained variations, Linear Programming - Simplex tableau, pivoting, sensitivity analysis.

UNIT IV ENERGY- ECONOMY MODELS 9

Multiplier Analysis - Energy and Environmental Input / Output Analysis - Energy Aggregation –Econometric Energy Demand Modeling - Overview of Econometric Methods - Dynamic programming - Search Techniques - Univariate / Multivariate.

UNIT V APPLICATIONS AND CASE STUDIES 9

Case studies of optimization in Energy systems problems- Dealing with uncertainty- probabilistic techniques – Trade-offs between capital and energy using Pinch analysis.

EY9154**STEAM GENERATOR TECHNOLOGY****L T P C****3 0 0 3****AIM:**

To understand the types, working of steam generator and their major components, along with design principles and calculations.

OBJECTIVES:

- To educate the students on the types of boilers with their constructional and functional significance.
- To understand the working and design of coal preparation units and boilers.
- To introduce the concept of heat transfer surfaces and the boiler design.

UNIT I INTRODUCTION**10**

Boilers – components - classification – general design considerations - boiler specifications. Fuel stoichiometry calculations – enthalpy calculation of air and combustion products – heat balance.

UNIT II COAL PREPARATION SYSTEM OF BOILERS**8**

Pulverizing properties of coal – air system for pulverization – size - reducing machines. Design of coal preparation system for PC Boilers – fuel-feeding arrangements

UNIT III DESIGN OF BURNERS**8**

Design of oil supply system - tangential fired burners - oil atomizers - air registers - design principles of oil fired boilers

UNIT IV BOILER FURNACE DESIGN**9**

General design Principles – flame Emissivity – heat transfer calculation for PC Boiler furnace – water wall arrangement – furnace emissivity – distribution of heat load in furnace. Fluidized bed boilers - major features of fluidized bed boilers – basic design principles.

UNIT V DESIGN OF CONVECTIVE HEAT TRANSFER SURFACE**10**

Design of economizer – superheater – reheater – air preheater. Temperature control in superheaters and reheaters.

TOTAL: 45 PERIODS**TEXT BOOKS:**

1. Prabir Basu, Cen Kefa and Louis Jestin, Boilers and Burners: Design and Theory, Springer 2000.
2. Ganapathy, V., Industrial Boilers and Heat Recovery Steam Generators, Marcel Dekker Ink 2003

EY 9155

FLUIDIZED BED SYSTEMS

**L T P C
3 0 0 3**

AIM:

To inspire the students with the theories of fluidization, heat transfer and design for various applications.

OBJECTIVES:

- To introduce the concepts of fluidization and heat transfer in fluidized beds.
- To understand the design principles and apply the same for industrial applications.

UNIT I FLUIDIZED BED BEHAVIOUR 12

Characterization of bed particles - comparison of different methods of gas - solid contacts. Fluidization phenomena - regimes of fluidization – bed pressure drop curve. Two phase and well-mixed theory of fluidization. Particle entrainment and elutriation – unique features of circulating fluidized beds.

UNIT II HEAT TRANSFER 6

Different modes of heat transfer in fluidized bed – bed to wall heat transfer – gas to solid heat transfer – radiant heat transfer – heat transfer to immersed surfaces. Methods for improvement – external heat exchangers – heat transfer and part load operations.

UNIT III COMBUSTION AND GASIFICATION 6

Fluidized bed combustion and gasification – stages of combustion of particles – performance - start-up methods. Pressurized fluidized beds.

UNIT IV DESIGN CONSIDERATIONS 9

Design of distributors – stoichiometric calculations – heat and mass balance – furnace design – design of heating surfaces – gas solid separators.

UNIT V INDUSTRIAL APPLICATIONS 12

Physical operations like transportation, mixing of fine powders, heat exchange, coating, drying and sizing. Cracking and reforming of hydrocarbons, carbonization, combustion and gasification. Sulphur retention and oxides of nitrogen emission Control.

TOTAL: 45 PERIODS

TEXT BOOKS:

EY 9156 DESIGN OF HEAT EXCHANGERS

L T P C
3 0 0 3

AIM:

The course is intended to build up necessary background for the design of the various types of heat exchangers.

OBJECTIVE:

- To learn the thermal and stress analysis on various parts of the heat exchangers
- To analyze the sizing and rating of the heat exchangers for various applications

UNIT I FUNDAMENTALS OF HEAT EXCHANGER 9

Temperature distribution and its implications types – shell and tube heat exchangers – regenerators and recuperators – analysis of heat exchangers – LMTD and effectiveness method.

UNIT II FLOW AND STRESS ANALYSIS 9

Effect of turbulence – friction factor – pressure loss – stress in tubes – header sheets and pressure vessels – thermal stresses, shear stresses - types of failures.

UNIT III DESIGN ASPECTS 9

Heat transfer and pressure loss – flow configuration – effect of baffles – effect of deviations from ideality – design of double pipe - finned tube - shell and tube heat exchangers - simulation of heat exchangers.

UNIT IV COMPACT AND PLATE HEAT EXCHANGERS 9

Types – merits and demerits – design of compact heat exchangers, plate heat exchangers – performance influencing parameters - limitations.

UNIT V CONDENSERS AND COOLING TOWERS 9

Design of surface and evaporative condensers – cooling tower – performance characteristics.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Sadik Kakac and Hongtan Liu, Heat Exchangers Selection, Rating and Thermal Design, CRC Press, 2002

REFERENCES

1. Arthur. P Frass, Heat Exchanger Design, John Wiley & Sons, 1988.

EY 9157 ADVANCED THERMAL STORAGE TECHNOLOGIES L T P C
3 0 0 3

AIM:

This course is intended to build up the necessary background to model and analyze the various types of thermal storage systems

OBJECTIVES:

- To learn the various types of thermal storage systems and the storage materials
- To develop the ability to model and analyze the sensible and latent heat storage units
- To study the various applications of thermal storage systems

UNIT I INTRODUCTION 8

Necessity of thermal storage – types-energy storage devices – comparison of energy storage technologies - seasonal thermal energy storage - storage materials.

UNIT II SENSIBLE HEAT STORAGE SYSTEM 9

Basic concepts and modeling of heat storage units - modeling of simple water and rock bed storage system – use of TRNSYS – pressurized water storage system for power plant applications – packed beds.

UNIT III REGENERATORS 10

Parallel flow and counter flow regenerators – finite conductivity model – non – linear model – transient performance – step changes in inlet gas temperature – step changes in gas flow rate – parameterization of transient response – heat storage exchangers.

UNIT IV LATENT HEAT STORAGE SYSTEMS 9

Modeling of phase change problems – temperature based model - enthalpy model - porous medium approach - conduction dominated phase change – convection dominated phase change.

UNIT V APPLICATIONS 9

Specific areas of application of energy storage – food preservation – waste heat recovery – solar energy storage – green house heating – power plant applications – drying and heating for process industries.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Ibrahim Dincer and Mark A. Rosen, Thermal Energy Storage Systems and Applications, John Wiley & Sons 2002.

REFERENCES

1. Schmidt.F.W and Willmott.A.J, Thermal Storage and Regeneration, Hemisphere Publishing Corporation, 1981.
2. Lunardini.V.J, Heat Transfer in Cold Climates, John Wiley and Sons 1981.

EY9158**ENERGY CONVERSION TECHNIQUES****L T P C
3 0 0 3****AIM:**

To detail on the different technologies in vogue for converting one form of energy to another.

OBJECTIVE:

- To analyze the pros and cons of
- Conventional energy conversion techniques
- Direct energy conversion systems
- Need and necessity of energy storage systems and their desirable characteristics
- Detail on thermodynamics and kinetics of fuel cells

UNIT I INTRODUCTION**8**

Energy conversion – conventional techniques – reversible and irreversible cycles – Carnot, Stirling and Ericsson – Otto, Diesel, Dual, Lenoir, Atkinson, Brayton, Rankine.

UNIT II DIRECT CONVERSION OF THERMAL TO ELECTRICAL ENERGY**8**

Thermoelectric Converters – thermoelectric refrigerator – thermoelectric generator – Thermionic converters – Ferro electric converter – Nernst effect generator – thermo magnetic converter.

UNIT III CHEMICAL AND ELECTROMAGNETIC ENERGY TO ELECTRICAL ENERGY**9**

Batteries – types – working – performance governing parameters – hydrogen energy – solar cells.

UNIT IV ENERGY STORAGE SYSTEMS**9**

Introduction – storage of mechanical energy, electrical energy, chemical energy, thermal energy.

UNIT V FUEL CELLS**11**

Basics – working advantages and drawbacks – types – comparative analysis – thermodynamics and kinetics of fuel cell process – performance of fuel cell – applications.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Archie.W.Culp, Principles of Energy Conversion, McGraw-Hill Inc., 1991, Singapore
2. Kordesch. K, and Simader.G, Fuel Cell and Their Applications, Wiley-Vch, Germany 1996

EY9159**ELECTRICAL DRIVES AND CONTROLS****L T P C
3 0 0 3****AIM:**

To expose the students to the fundamentals of electrical drives and their applications in electrical machines.

OBJECTIVES:

To impart knowledge on:

- Characteristics, starting, speed control and breaking of DC and AC motors.
- Concepts of various losses and harmonics effects.
- Super conducting generators and motors, which have improved power system stability and higher efficiency, compared with conventional machines.
- Applications of solid-state devices in speed control of electrical machines.

UNIT I CONVENTIONAL MOTOR DRIVES 9

Characteristics of DC and AC motor for various applications - starting and speed control - methods of breaking.

UNIT II PHYSICAL PHENOMENA IN ELECTRICAL MACHINES 9

Various losses in motors-Saturation and Eddy current effects - MMF harmonics and their influence of leakage-stray losses - vibration and noise.

UNIT III SOLID STATE POWER CONTROLLERS 9

Power devices - Triggering Circuits – Rectifiers – Choppers - Inverters - AC Controllers.

UNIT IV SUPERCONDUCTIVITY 9

Super conducting generators-motors and magnets - Super conducting magnetic energy storage (SMES).

UNIT V SOLID STATE MOTOR CONTROLLERS 9

Single and Three Phase fed DC motor drives - AC motor drives - Voltage Control - Rotor resistance control - Frequency control - Slip Power Recovery scheme.

TOTAL: 45PERIODS**TEXT BOOKS:**

1. Pillai.S.K, A First course on Electrical Drives, Wiley Eastern Limited (1982).
2. NKDE and P.K.Sen, Electrical drives, Prentice Hall of India Pvt Ltd (2001)
3. P.S.Bimbhra, Power Electronics, Khanna Publishers.

EY9160 POWER GENERATION, TRANSMISSION AND UTILIZATION**L T P C**
3 0 0 3**UNIT I CONVENTIONAL POWER GENERATION 9**

Steam power plant - Selection of site - Generated Layout - coal and Ash Handling - Steam Generating Plants - Feed Make Circuit - Cooling Towers - Turbine Governing -Hydro Power Plant-Selection of Site - Classification Layout Governing of Turbines - Nuclear Power Plants - Selection of Site - Classification Layout Governing of Turbines - Nuclear Power Plants - Selection of Site - Nuclear Fuels - Nuclear reactors - Nuclear disposal - Gas Turbine Plants.

UNIT II NON CONVENTIONAL POWER GENERATION 9

Wind power generation - characteristics of wind power-design of windmills - Tidal power generation - Single and two-basin systems -Turbines for tidal power - Solar power generation - Energy from biomass, biogas and waste

UNIT III ECONOMICS OF POWER GENERATION 9

Daily load curves - load factor - diversity factor - load deviation curve - load management - number and size of generating unit, cost of electrical energy – tariff - power factor improvement

UNIT IV ELECTRICAL POWER TRANSMISSION 9

Online diagram of transmission - substation and distribution systems - comparison of systems (DC and AC) - EHVAC and HVDC transmission - layout of substations and bus bar arrangements - Equivalent circuit of short, medium and long lines - Transmission efficiency-regulation-reactive power - compensation-transmission - loss minimization

UNIT V UTILISATION OF ELECTRICAL ENERGY 9

Selection of Electrical Drives - Electrical characteristics and mechanical considerations -size, rating and cost, Transformer characteristics – illumination - laws of illumination-polar curve - incandascnt-fluoroscent and vapour lamps - Design of OLTC lighting Scheme of industry-electrical welding - energy efficient aspects of devices

TOTAL: 45 PERIODS**REFERENCES:**

**EY9161 WASTE MANAGEMENT AND ENERGY RECOVERY L T P C
3 0 0 3**

AIM:

To motivate the students by highlighting the importance of waste management, high-grade energy generation from waste and hygienic waste disposal options.

OBJECTIVES:

- To provide information on various methods of waste management
- To familiarize students with recent energy generation techniques
- To detail on the recent technologies of waste disposal and
- To make student realize on the importance of healthy environment.

UNIT I SOLID WASTE – CHARACTERISTICS AND PERSPECTIVES 6

Definition - types – sources – generation and estimation. Properties: physical, chemical and biological – regulation

UNIT II COLLECTION, TRANSPORTATION AND PROCESSING TECHNIQUES 8

Onsite handling, storage and processing – types of waste collection mechanisms - transfer Stations : types and location – manual component separation - volume reduction : mechanical, thermal – separation : mechanical, magnetic electro mechanical

UNIT III ENERGY GENERATION TECHNIQUES 16

Basics, types, working and typical conversion efficiencies of composting – anaerobic digestion – RDF – combustion – incineration – gasification – pyrolysis

UNIT IV HAZARDOUS WASTE MANAGEMENT 8

Hazardous waste – definition - potential sources - waste sources by industry – impacts – waste control methods – transportation regulations - risk assessment - remediation technologies – Private public patnership – Government initiatives.

UNIT V ULTIMATE DISPOSAL 7

Landfill – classification – site selection parameters – design aspects – Leachate control – environmental monitoring system for Land Fill Gases.

TOTAL: 45 PERIODS

TEXT BOOKS:

EY 9162 CLEAN DEVELOPMENT MECHANISM**L T P C
3 0 0 3****AIM:**

To create awareness on eco-cess, Kyoto protocol, Clean Development Mechanism, Joint Implementation and Emissions Trading

OBJECTIVE:

- To present the case of global warming, its cause and its present and foreseen impacts on human community.
- Details on the factors led to Kyoto protocol and its resolution
- Comprehensive study on clean development mechanism and its impact on Indian energy scenario.

UNIT I CLIMATE SCIENCE 10

World energy scenario - observed and modeled changes in climate - role of Aerosols - climate change scenarios - global warming – factors contributing – comparison of global warming potential of GHG - impacts

UNIT II KYOTO PROTOCOL: FORMATION 6

Historical perspectives from the industrial revolution to the United Nations framework convention on climate change and the Kyoto protocol, the intergovernmental panel on climate change (IPCC)

UNIT III KYOTO PROTOCOL 12

Article 1 through 28 - accounted GHGs in Kyoto protocol – source categorization of GHG emissions – reduction commitment of Annexe B countries – C D M, joint implementation and emissions trading

UNIT IV CLEAN DEVELOPMENT MECHANISM AND BASELINE STUDY SCENARIO 10

CDM and its economic viability for renewable energy projects – advantages for developing countries – emission and efficiency scenario of different energy sources

for power generation. Baseline Study – methodology – boundary conditions – base line Fixing – typical case studies.

UNIT V RECENT ADVANCEMENTS 7

Recent advancements in the CDM technologies, issues and protocols, Emission certification norms and methods

EY9163 SOLAR ENERGY SYSTEMS

**L T P C
3 0 0 3**

AIM:

To understand the fundamentals of solar energy and its conversion techniques for both thermal and electrical energy applications.

OBJECTIVES:

- To learn and study the radiation principles with respective solar energy estimation
- To learn about PV technology principles and techniques of various solar cells / materials for solar energy conversion
- To learn economical and environmental merits of solar energy for variety applications

UNIT I SOLAR RADIATION AND COLLECTORS 9

Solar angles - day length, angle of incidence on tilted surface - Sunpath diagrams - shadow determination - extraterrestrial characteristics - measurement and estimation on horizontal and tilted surfaces - flat plate collector thermal analysis - heat capacity effect - testing methods - evacuated tubular collectors - concentrator collectors – classification - design and performance parameters - tracking systems - compound parabolic concentrators - parabolic trough concentrators - concentrators with point focus - Heliostats – performance of the collectors.

UNIT II APPLICATIONS OF SOLAR THERMAL TECHNOLOGY 9

Principle of working, types - design and operation of - solar heating and cooling systems - solar water heaters – thermal storage systems – solar still – solar cooker – domestic, community – solar pond – solar drying.

UNIT III SOLAR PV FUNDAMENTALS 9

Semiconductor – properties - energy levels - basic equations of semiconductor devices physics. Solar cells - p-n junction: homo and hetero junctions - metal-semiconductor interface - dark and illumination characteristics - figure of merits of solar cell - efficiency limits - variation of efficiency with band-gap and temperature - efficiency measurements - high efficiency cells - preparation of metallurgical, electronic and solar grade Silicon - production of single crystal Silicon: Czochralski (CZ) and Float Zone (FZ) method - Design of a complete silicon – GaAs- InP solar cell - high efficiency III-V, II-VI multi junction solar cell; a-Si-H based solar cells- quantum well solar cell - thermophotovoltaics.

UNIT IV SOLAR PHOTOVOLTAIC SYSTEM DESIGN AND APPLICATIONS 9

Solar cell array system analysis and performance prediction- Shadow analysis: reliability - solar cell array design concepts - PV system design - design process and optimization - detailed array design - storage autonomy - voltage regulation - maximum tracking - use of computers in array design - quick sizing method - array protection and trouble shooting - centralized and decentralized SPV systems - stand alone - hybrid and grid connected system - System installation - operation and maintenances - field experience - PV market analysis and economics of SPV systems.

UNIT V SOLAR PASSIVE ARCHITECTURE 9

Thermal comfort - heat transmission in buildings- bioclimatic classification – passive heating concepts: direct heat gain - indirect heat gain - isolated gain and sunspaces - passive cooling concepts: evaporative cooling - radiative cooling - application of wind, water and earth for cooling; shading - paints and cavity walls for cooling - roof radiation traps - earth air-tunnel. – energy efficient landscape design - thermal comfort - concept of solar temperature and its significance - calculation of instantaneous heat gain through building envelope.

EY 9164

WIND ENERGY SYSTEMS

3 0 0 3

AIM:

To understand the fundamentals of wind energy and its conversion techniques for electrical energy applications.

OBJECTIVES:

- To understand the fundamentals of wind energy and its conversion system
- To learn Geo thermal, OTEC, wave energy fundamentals energy conservation techniques, system and design methods
- To learn different classification in Hydropower sources and its energy conservation techniques along with environmental impact.

UNIT - I FUNDAMENTALS OF WIND ENERGY

9

Structure – statistics measurements and data presentation – wind turbine aerodynamics– momentum theories - basic aerodynamics – airfoils and their characteristics – HAWT - blade element theory – Prandtl's lifting line theory (Prescribed wake analysis) VAWT aerodynamics - wind turbine loads – aerodynamic loads in steady operation – wind turbulence – Yawed operation and tower Shadow.

UNIT - II WIND ENERGY CONVERSION SYSTEMS (WECS)

9

Siting - rotor selection - annual energy output - horizontal axis wind turbine (HAWT) - vertical axis wind turbine - rotor design considerations - number of blades - blade profile - 2/3 blades and teetering – coning - upwind / downwind - power regulation - Yaw system - tower - synchronous and asynchronous generators and loads - integration of wind energy Converters to Electrical networks – inverters - testing of WECS- WECS control system - requirements and strategies- miscellaneous topics- noise etc- other applications.

UNIT - III GEO, OTEC THERMAL ENERGY SOURCES

9

Introduction – estimates to geo thermal sources – hydro thermal resources – applications for thermal and electricity generation – prime movers – impulse and reaction turbines - small and medium scale hydro power - ocean energy -

Introduction – OTEC conversion – thermal electric power generation - energy utilization – heat exchangers – site selection – potential Impacts

UNIT - IV TIDES AND WAVES ENERGY SOURCES 9

Introduction – principal of tidal power – power plants – applications - utilization of tidal energy –application - site requirements - storage systems - different methods and potential in India-waves energy – Introduction - basic concepts - wave power devices - wave energy conversion devices.

UNIT - V HYDRO POWER RESOURCES 9

Introduction - hydro electric basic concepts - hydro power plant - potential applications- potential development hydro power stations - components of hydro electric scheme- environmental aspects - potential impacts of harnessing the different renewable energy resources.

TOTAL: 45

PERIODS

TEXT BOOKS:

1. Freris, L.L., Wind Energy Conversion Systems, Prentice Hall, 1990
2. Twidell, J.W. and Weir, A., Renewable Energy Sources, EFN Spon Ltd., 1983.

REFERENCES:

1. Spera, D.A., Wind Turbine Technology: Fundamental concepts of Wind Turbine Engineering, ASME Press, 1994.
2. Duffie, A and Beckmann, W. A., Solar Engineering of Thermal Processes, John Wiley, 1991.
3. Godfrey Boyle, Renewable Energy, Power for a Sustainable Future, Oxford University Press, 1996.

AIM:

To disseminate the technologies for utilizing bio-energy and its manifold benefits compared to conventional fossil fuels.

OBJECTIVE:

- To detail on the types of biomass, its surplus availability and characteristics.
- Analyze the technologies available for conversion of biomass to energy in terms of its technical competence and economic implications.

UNIT I INTRODUCTION 8

Biomass: types – advantages and drawbacks – Indian scenario – characteristics – carbon neutrality – conversion mechanisms – fuel assessment studies

UNIT II BIOMETHANATION 8

Microbial systems – phases in biogas production – parameters affecting gas production – effect of additives on biogas yield – possible feed stocks. Biogas plants – types – design – constructional details and comparison – biogas appliances – Burner, illumination and power generation – effect on engine performance.

UNIT III COMBUSTION 10

Perfect, complete and incomplete – equivalence ratio – fixed Bed, fluid Bed – fuel and ash handling – steam cost comparison with conventional fuels. Briquetting: types of Briquetting – merits and demerits – feed requirements and preprocessing – advantages - drawbacks

UNIT IV GASIFICATION 10

Types – comparison – application – performance evaluation – economics – dual fuel engines – 100 % Gas Engines – engine characteristics on gas mode – gas cooling and cleaning train.

UNIT V PYROLYSIS AND CARBONIZATION 9

Types – process governing parameters – thermo gravimetric analysis – differential thermal analysis – differential scanning calorimetry – Typical yield rates.

TOTAL: 45 PERIODS

TEXT BOOKS:

AIM:

To provide in-depth knowledge on Nuclear reaction materials reprocessing techniques and also to understand nuclear waste disposal techniques and radiation protection aspects.

OBJECTIVES:

- To describe fundamental study of nuclear reactions
- To learn nuclear fuels cycles, characteristics. Fundamental principles governing nuclear fission chain reaction and fusion
- To discuss future nuclear reactor systems with respect to generation of energy, fuel breeding, incineration of nuclear material and safety.

UNIT I NUCLEAR REACTIONS 9

Mechanism of nuclear fission - nuclides - radioactivity – decay chains - neutron reactions - the fission process - reactors - types of fast breeding reactor - design and construction of nuclear reactors - heat transfer techniques in nuclear reactors - reactor shielding.

UNIT II REACTOR MATERIALS 9

Nuclear Fuel Cycles - characteristics of nuclear fuels - Uranium - production and purification of Uranium - conversion to UF₄ and UF₆ - other fuels like Zirconium, Thorium - Beryllium.

UNIT III REPROCESSING 9

Nuclear fuel cycles - spent fuel characteristics - role of solvent extraction in reprocessing - solvent extraction equipment.

UNIT IV SEPARATION OF REACTOR PRODUCTS 9

Processes to be considered - 'Fuel Element' dissolution - precipitation process – ion exchange - redox - purex - TTA - chelation -U₂₃₅ - Hexone - TBP and thorax Processes - oxidative slaging and electro - refining - Isotopes - principles of Isotope separation.

UNIT V WASTE DISPOSAL AND RADIATION PROTECTION 9

Types of nuclear wastes - safety control and pollution control and abatement - international convention on safety aspects - radiation hazards prevention.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Glasstone, S. and Sesonske, A, Nuclear Reactor Engineering, 3rd Edition, Von Nostrand, 1984.
2. Duderstadt, J.J. and Hamilton, L.J., Nuclear Reactor Analysis, John Wiley, 1976.

GREEN BUILDINGS

L T P C

3 0 0 3

AIM:

This course provides an introduction to the materials, theories and practices of Green building planning, design, construction, operation and deconstruction

OBJECTIVES:

- To learn green buildings concepts and ecological design concepts applicable to modern buildings
- Acquaint students with the principle theories materials, construction techniques and to create green buildings
- To provide exposure to various national and international rating systems as compliance requirements for green buildings

UNIT I GREEN BUILDING PROCESS AND ECOLOGICAL DESIGN 9

Conventional versus green building delivery systems - Green building project execution - the integrated design process - green building documentation requirements - design versus ecological design - historical perspective - contemporary ecological design - future ecological design - green design to regenerative design.

UNIT II GREEN BUILDING SYSTEMS 9

Sustainable sites and landscaping – enhancing ecosystems - building envelop – selection of green materials - products and practices - passive design strategy – internal load reduction – indoor environment quality – building water and waste management – relevance to LEED / IGBC standards.

UNIT III GREEN BUILDING IMPLEMENTATION 9

Site protection planning - health and safety planning - construction and demolition waste management - reducing the footprint of construction operations - maximizing the value of building commissioning in HVAC System, lighting and non mechanical Systems - costs and benefits relevance to LEED / IGBC standards.

UNIT IV GREEN BUILDING ASSESSMENT 9

USGBC LEED building assessment standard - LEED certification process – green globes building assessment protocol- international building assessment systems - LEED-NC Platinum / gold / silver building case studies – trends in building rating systems – IGBC standards – ECBC compliances.

UNIT V ECONOMICS OF GREEN BUILDINGS 9

Business case for high-performance green buildings - the economics of green building - benefits - managing initial costs - cost barrier in project management - long-term environment benefits.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Jerry Yudelson, Green building A to Z, Understanding the buildings, 2008.
2. Green building guidelines: Meeting the demand for low-energy, resource-efficient homes. Washington, D.C.: Sustainable Buildings Industry Council, 2004.

3. Means, R.S., Green building: project planning & cost estimating: a practical guide to materials, systems and standards; green, 2nd Edition. Kingston, Mass., 2006.
4. Alex Wilson and Mark Peipkorn., Green Building Products: the GreenSpec guide to residential building materials, 2nd Edition, Gabriola Island, BC:
5. Jane Anderson, David E. Shiers, and Mike Sinclair. The green guide to specification: an environmental profiling system for building materials and components, 3rd Edition, Oxford; Malden, MA: Blackwell Science, 2002.
6. Charles J. Kibert, Sustainable Construction: Green Building Design and Delivery, 2nd Edition, Wiley, 2007.
7. ECBC 2007 Manual, Bureau of Energy Efficiency, New Delhi

AIM:

To instil the working principles, performance and applications of Turbomachines in the minds of the students.

OBJECTIVES:

- To introduce the energy transfer process in Turbomachines and governing equations of various forms.
- To understand the structural and functional aspects of major components of Turbomachines.
- To understand the applications of Turbomachines to gas turbine power plants and aerospace propulsion.

UNIT I INTRODUCTION 12

Basics of isentropic flow – diffuser and nozzle configurations - static and stagnation properties – area ratio – mass flow rate – critical properties - operating characteristics of diffuser and Nozzle. Various types of subsonic and supersonic inlets. Basics of Fanno and Rayleigh flow. Basics of normal and oblique shock waves. Use of gas tables. Energy transfer between fluid and rotor velocity triangles for a generalized turbomachine - methods of representing velocity diagrams - Euler turbine equation and its different forms - degree of reaction in turbo-machines – various efficiencies – isentropic, mechanical, thermal, polytropic etc.

UNIT II CENTRIFUGAL AND AXIAL FLOW COMPRESSORS 9

Centrifugal compressor - configuration and working – slip factor - work input factor – ideal and actual work - pressure coefficient - pressure ratio. Axial flow compressor – geometry and working – velocity diagrams – ideal and actual work – stage pressure ratio - free vortex theory – performance curves.

UNIT III COMBUSTION CHAMBER 6

Basics of combustion and chamber – chamber arrangements - flame stability – fuel injection nozzles. Swirl for stability - cooling of combustion chamber.

UNIT IV AXIAL AND RADIAL FLOW TURBINES 9

Elementary theory of axial flow turbines - stage parameters- multi-staging - stage loading and flow coefficients - degree of reaction - stage temperature and pressure ratios – single and twin spool arrangements – performance. Matching of components. Blade Cooling. Radial flow turbines.

UNIT V GAS TURBINE AND JET ENGINE CYCLES 9

Gas turbine cycle analysis – simple and actual – Reheater, Regenerator and Intercooled cycles. Working principles of Turbojet, Turbofan, Turboprop, Ramjet, Scramjet and Pulsejet Engines and cycle analysis – thrust, specific impulse, sfc, thermal and propulsive efficiencies.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Khajuria P.R and Dubey S.P., Gas Turbines and Propulsive Systems, Dhanpat Rai Publications, 2003.
2. Ganesan, V. Gas Turbines, Tata McGrawHill, 1999.

REFERENCES:

1. Cohen, H., Rogers, G F C and Saravanmotto, H I H, Gas Turbine Theory, John Wiley, 5th Edition 2001.
2. Hill P G and Peterson C R, Mechanics and Thermodynamics of Propulsion, Addition-Wesley, 1970.
3. Mattingly J D, Elements of Gas turbine Propulsion, McGraw Hill, 1st Edition. 1997.

AIM:

To enlighten the student community on various technological advancements, benefits and prospects of utilizing hydrogen/fuel cell for meeting the future energy requirements.

OBJECTIVE:

- To detail on the hydrogen production methodologies, possible applications and various storage options
- To discuss on the working of a typical fuel cell, its types and to elaborate on its thermodynamics and kinetics
- To analyze the cost effectiveness and eco-friendliness of Fuel Cells

UNIT I HYDROGEN – BASICS AND PRODUCTION TECHNIQUES 9

Hydrogen – physical and chemical properties, salient characteristics. Production of hydrogen – steam reforming – water electrolysis – gasification and woody biomass conversion – biological hydrogen production – photo dissociation – direct thermal or catalytic splitting of water.

UNIT II HYDROGEN STORAGE AND APPLICATIONS 9

Hydrogen storage options – compressed gas – liquid hydrogen – Hydride – chemical Storage – comparisons. Hydrogen transmission systems. Applications of Hydrogen.

UNIT III FUEL CELLS 9

History – principle - working - thermodynamics and kinetics of fuel cell process – performance evaluation of fuel cell – comparison on battery Vs fuel cell

UNIT IV FUEL CELL - TYPES 9

Types of fuel cells – AFC, PAFC, SOFC, MCFC, DMFC, PEMFC – relative merits and demerits

UNIT V APPLICATION OF FUEL CELL AND ECONOMICS 9

Fuel cell usage for domestic power systems, large scale power generation, Automobile, Space. Economic and environmental analysis on usage of Hydrogen and Fuel cell. Future trends in fuel cells.

TOTAL: 45 PERIODS**TEXT BOOKS:**

1. Rebecca L. and Busby, Hydrogen and Fuel Cells: A Comprehensive Guide, Penn Well Corporation, Oklahoma (2005)
2. Bent Sorensen (Sørensen), Hydrogen and Fuel Cells: Emerging Technologies and Applications, Elsevier, UK (2005)

EY 9170 ENVIRONMENTAL ENGINEERING AND POLLUTION CONTROL

L T P C
3 0 0 3

AIM:

To create awareness among the student community on anthropogenic degradation of environment and technologies available to limit the degradation.

OBJECTIVES:

- To impart knowledge on the atmosphere and its present condition, global warming and eco-legislations.
- To detail on the sources of air, water and noise pollution and possible solutions for mitigating their degradation.
- To elaborate on the technologies available for generating energy from waste.

UNIT I INTRODUCTION 9

Global atmospheric change – green house effect – Ozone depletion - natural cycles - mass and energy transfer – material balance – environmental chemistry and biology – impacts – environmental. Legislations.

UNIT II AIR POLLUTION 9

Pollutants - sources and effect – air pollution meteorology – atmospheric dispersion – indoor air quality - control methods and equipments - issues in air pollution control – air sampling and measurement.

UNIT III WATER POLLUTION 9

Water resources - water pollutants - characteristics – quality - water treatment systems – waste water treatment - treatment, utilization and disposal of sludge - monitoring compliance with standards.

UNIT IV WASTE MANAGEMENT 9

Sources and Classification – Solid waste – Hazardous waste - Characteristics – Collection and Transportation - Disposal – Processing and Energy Recovery – Waste minimization.

UNIT V OTHER TYPES OF POLLUTION FROM INDUSTRIES 9

Noise pollution and its impact - oil pollution - pesticides - instrumentation for pollution control - water pollution from tanneries and other industries and their control – environment impact assessment for various projects – case studies.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. G. Masters: Introduction to Environmental Engineering and Science, Prentice Hall of India Pvt Ltd, New Delhi, 2003
2. Peavy, H.S. and D.R. Rowe, G.Tchobanoglous: Environmental Engineering - McGraw- Hill BookCompany, NewYork, 1985

REFERENCES

1. Ludwig, H. W. Evans: Manual of Environmental Technology in Developing Countries, International Book Company, Absecon Highlands, N.J, 1991
2. Arcadio P Sincero and G. A. Sincero, Environmental Engineering – A Design Approach, Prentice Hall of India Pvt Ltd, New Delhi, 2002

AIM

This course aims to introduce numerical modeling and its role in the field of heat and fluid flow, it will enable the students to understand the various discretisation methods and solving methodologies and to create confidence to solve complex problems in the field of heat transfer and fluid dynamics.

OBJECTIVE :

- (i) To develop finite difference and finite volume discretized forms of the CFD equations.
- (ii) To formulate explicit & implicit algorithms for solving the Euler Eqns & Navier Stokes Eqns.

UNIT – I GOVERNING DIFFERENTIAL EQUATION AND FINITE DIFFERENCE METHOD 10

Classification, Initial and Boundary conditions – Initial and Boundary Value problems – Finite difference method, Central, Forward, Backward difference, Uniform and non-uniform Grids, Numerical Errors, Grid Independence Test.

UNIT – II CONDUCTION HEAT TRANSFER 10

Steady one-dimensional conduction, Two and three dimensional steady state problems, Transient one-dimensional problem, Two-dimensional Transient Problems.

UNIT – III INCOMPRESSIBLE FLUID FLOW 10

Governing Equations, Stream Function – Vorticity method, Determination of pressure for viscous flow, SIMPLE Procedure of Patankar and Spalding, Computation of Boundary layer flow, finite difference approach.

UNIT – IV CONVECTION HEAT TRANSFER AND FEM 10

Steady One-Dimensional and Two-Dimensional Convection – diffusion, Unsteady one-dimensional convection – diffusion, Unsteady two-dimensional convection – Diffusion – Introduction to finite element method – solution of steady heat conduction by FEM – Incompressible flow – simulation by FEM.

UNIT – V TURBULENCE MODELS 5

Algebraic Models – One equation model, $K - \epsilon$ Models, Standard and High and Low Reynolds number models, Prediction of fluid flow and heat transfer using standard codes.

TOTAL : 45 PERIODS**TEXT BOOKS :**

1. Muralidhar, K., and Sundararajan, T., "Computational Fluid Flow and Heat Transfer", Narosa Publishing House, New Delhi, 1995.
2. Ghoshdasdar, P.S., "Computer Simulation of flow and heat transfer" Tata McGraw-Hill Publishing Company Ltd., 1998.
3. Subas, V. Patankar "Numerical heat transfer fluid flow", Hemisphere Publishing Corporation, 1980.

REFERENCES :

4. Fletcher, C.A.J. "Computational Techniques for fluid Dynamics 2" Specific Techniques for Different Flow Categories, Springer – Verlag, 1987.
5. Bose, T.X., "Numerical Fluid Dynamics" Narosa Publishing House, 1997.

AIM:

To understand the concept and methods of demand side management and load control both utility side and area side

OBJECTIVES:

- To provide in-depth load management techniques for shifting / leveling the load
- To analyze the impact system load shape, cost benefit and feasibility study of DSM program.
- To learn economic utilization of energy resources

UNIT I CONCEPTS AND METHODS OF DSM, LOAD CONTROL 9

Load control - energy efficiency - load management - DSM planning – design – marketing - impact assessment – direct – distributed - and local control - interruptible load - configuration of control system for load control - assessment of impact on load shape.

UNIT II STRATEGIC CONSERVATION AND LOAD MANAGEMENT TECHNOLOGIES 9

Strategic conservation via improving building envelope - air-conditioning – lighting - electric motor - and other industrial processes and equipment - load shifting and load leveling through thermal energy storage.

UNIT III ASSESSMENT OF IMPACT ON SYSTEM LOAD SHAPE 9

Energy audit and assessment of customers load shape for different customer groups - impact of DSM programs on load shapes in customer groups - categorized in economic sub sectors and by geographical location.

UNIT IV COST / BENEFIT ANALYSIS AND FEASIBILITY OF DSM PROGRAM 9

DSM program costing and Load Shape Impact on system - DSM program cost/benefit and feasibility - environmental benefits - type of customer incentives and programs - program design - use of analytic hierarchical process for assessment of customer acceptance and program penetration.

UNIT – V INTEGRATED ELECTRIC UTILITY SERVICE UNDER DEREGULATED SITUATION 9

Institutional – legal - and political environments and the stages of development of electric utility Service - the mechanism of competition and development of the financial environment for economic utilization of resources for electric service.
