CHOICE BASED CREDIT SYSTEM

B.E. MANUFACTURING ENGINEERING

THE VISION OF THE DEPARTMENT OF MANUFACTURING ENGINEERING

The Department of Manufacturing Engineering strives to produce global manufacturing leadership through cutting-edge education and research, fostering ethical professionalism and entrepreneurial spirit to address societal needs and drive sustainable development.

THE MISSION OF THE DEPARTMENT OF MANUFACTURING ENGINEERING

1. Advancing manufacturing technology and education through high-quality programs, equipping students with the latest industry advancements, and driving societal development through continuous improvement.
2. Provide an encouraging environment to promote academic endeavours and facilitate superior pedagogical and learning experiences.
3. Create state of art facilities through collaborative research and consultancy projects focusing on emerging fields.
4. Collaborate with academic and industrial organizations on research initiatives aimed at developing and delivering indigenous solutions tailored to native social needs while also scaling to meet global demands.
5. Cultivating intellectually proficient, ethically sound students, fostering creativity, leadership, and civic responsibility while committed to top-tier academic and organizational programs.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

The PEOs of the B.E. Manufacturing Engineering Programme are as follows

The B.E. Manufacturing Engineering graduates will

1. Exhibit technical knowledge and get employed in jobs related to manufacturing sectors at national and global levels with ethical practices.
2. Demonstrate an ability for higher education and take up leadership roles in their professional life.
3. Emanate as an entrepreneur by establishing industry/ start-ups and providing jobs to others.
4. Apply proficiency in subjects through research and consultancy and to provide solutions to the industrial problems in the manufacturing sectors.
5. Inculcate intent towards lifelong learning, certification from professional organization and active participation in professional societies.

PROGRAMME OUTCOMES (POs)

The POs of the B.E. Manufacturing Engineering Programme are as follows

PO	Graduate Attribute	Programme Outcome
1	Engineering knowledge	Engineering/Fundamental knowledge in mathematics, engineering, sciences, computer science, humanities, and social science.
2	Problem analysis	Identify, formulate and solve industrial problems with the knowledge gained.
3	Design/development of solutions	Design a component or system and provide solutions by understanding its current status to improve its performance and satisfying its constraints.
4	Conduct investigations of complex problems	Conduct experimentation and collect, analyze as well as interpret the data in a systematic way.
5	Modern tool usage	Ability to apply various modern tools and techniques to improve the efficiency of the system.
6	The Engineer and society	Conduct themselves to uphold the professional and social obligations.
7	Environment and sustainability	Design and develop the systems with environment consciousness and sustainable manufacturing.
8	Ethics	Behave and practice ethically in the professional carrier.
9	Individual and team work	Demonstrate leadership skills and also be able to function as a team player.
10	Communication	Communicate professionally in both oral and written forms.
11	Project management and finance	Ability to manage through effective economic planning and control.
12	Life-long learning	Creating interest in the lifelong learning attitude.

PROGRAM SPECIFIC OUTCOMES (PSOs)

Upon completing the Manufacturing Engineering degree program, the graduate shall have the following Program Specific Outcomes (PSOs).

1. Design: Proficiency in utilizing advanced software tools and techniques for conceptualizing, modeling, and simulating engineering designs, enabling innovative and efficient solutions to complex problems.
2. Manufacturing Processes: Competence in implementing sustainable manufacturing practices that optimize resource utilization, enhance product lifecycle management and minimize environmental impact, while adhering to industry standards and regulations.
3. Manufacturing Management: Ability to integrate advancements in manufacturing technologies, processes, and management strategies to optimize production systems, improve operational efficiency, and drive continuous improvement initiatives for enhanced competitiveness in the global market.

HS7151	FOUNDATIONAL ENGLISH	L	T	P	C
		4	0	0	4

COURSE DESCRIPTION:

This course aims at developing the language skills necessary for the first year students of Engineering and Technology.

OBJECTIVES:

- To develop the four language skills – Listening, Speaking, Reading and Writing.
- To improve the students' communicative competence in English.
- To teach students the various aspects of English language usage.

CONTENTS

UNIT I GREETING AND INTRODUCING ONESELF 12

Listening- Types of listening – Listening to short talks, conversations; Speaking – Speaking about one's place, important festivals etc. – Introducing oneself, one's family/ friend; Reading – Skimming a passage– Scanning for specific information; **Writing**- Guided writing - Free writing on any given topic (My favourite place/ Hobbies/ School life, writing about one's leisure time activities, hometown, etc.); **Grammar** – Tenses (present and present continuous) -Question types - Regular and irregular verbs; Vocabulary – Synonyms and Antonyms.

UNIT II GIVING INSTRUCTIONS AND DIRECTIONS 12

Listening – Listening and responding to instructions; Speaking – Telephone etiquette - Giving oral instructions/ Describing a process – Asking and answering questions; Reading – Reading and finding key information in a given text - Critical reading - Writing –Process description(non-technical)- Grammar – Tense (simple past& past continuous) - Use of imperatives – Subject – verb agreement – Active and passive voice; - Vocabulary – Compound words – Word formation – Word expansion (root words).

UNIT III READING AND UNDERSTANDING VISUAL MATERIAL 12

Listening- Listening to lectures/ talks and completing a task; **Speaking** –Role play/ Simulation –Group interaction; **Reading** – Reading and interpreting visual material; **Writing**- Jumbledsentences — Discourse markers and Cohesive devices — Essay writing (cause & effect/ narrative);**Grammar** – Tenses (perfect), Conditional clauses –Modal verbs; **Vocabulary** –Causeand effect words; Phrasal verbs in context.

UNIT IV CRITICAL READING AND WRITING 12

Listening- Watching videos/ documentaries and responding to questions based on them; Speaking Informal and formal conversation; Reading –Critical reading (prediction & inference);Writing–Essay writing (compare & contrast/ analytical) – Interpretation of visual materials; Grammar – Tenses (future time reference);Vocabulary – One word substitutes (with meanings) – Use of abbreviations & acronyms – Idioms in sentences.

UNIT V LETTER WRITING AND SENDING E-MAILS 12

Listening- Listening to programmes/broadcast/ telecast/ podcast; Speaking – Giving impromptu talks, Making presentations on given topics- Discussion on the presentation; Reading –Extensive reading; Writing- Poster making – Letter writing (Formal and E-mail) ;Grammar – Direct and Indirect speech – Combining sentences using connectives; Vocabulary –Collocation;

TEACHING METHODS:
Interactive sessions for the speaking module.
Use of audio – visual aids for the various listening activities.
Contextual Grammar Teaching

EVALUATION PATTERN:
Internals – 50%
End Semester – 50%

TOTAL: 60 PERIODS

Course Outcomes
Upon Completion of the course, the students will be able to:

CO1 : Improve their reading and writing skills
CO2 : Become fluent and proficient in communicative English
CO3 : Improve their interpersonal communication
CO4 : Have the capacity to discuss texts, verbally and in written form, with an independent intellectual perspective
CO5 : Generate skills in communication through visual imagery and media

MA7151	MATHEMATICS I (Common to all branches of B.E. / B.Tech. Programmes in I Semester)	L	T	P	C
		4	0	0	4

OBJECTIVES

- The goal of this course is for students to gain proficiency in calculus computations. In calculus, we use three main tools for analyzing and describing the behavior of functions: limits, derivatives, and integrals. Students will use these tools to solve application problems in a variety of settings ranging from physics and biology to business and economics.
- To make the student acquire sound knowledge of techniques in solving ordinary differential equations that model engineering problems.
- To familiarize the student with functions of several variables. This is needed in many branches of engineering.
- To acquaint the student with mathematical tools needed in evaluating multiple integrals and their usage.

UNIT I DIFFERENTIAL CALCULUS 12

Representation of functions - New functions from old functions - Limit of a function - Limits at infinity - Continuity - Derivatives - Differentiation rules - Polar coordinate system - Differentiation in polar coordinates - Maxima and Minima of functions of one variable.

UNIT II FUNCTIONS OF SEVERAL VARIABLES 12

Partial derivatives – Homogeneous functions and Euler's theorem – Total derivative – Differentiation of implicit functions – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor's series for functions of two variables – Errors and approximations – Maxima and minima of functions of two variables – Lagrange's method of undetermined multipliers.

UNIT III INTEGRAL CALCULUS 12

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

UNIT IV MULTIPLE INTEGRALS 12

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Triple integrals – Volume of solids – Change of variables in double and triple integrals.

UNIT V DIFFERENTIAL EQUATIONS 12

Method of variation of parameters – Method of undetermined coefficients – Homogenous equation of Euler's and Legendre's type – System of simultaneous linear differential equations with constant coefficients.

TOTAL: 60 PERIODS

Course Outcomes

Upon Completion of the course, the students will be able to:

CO1 : Assimilate ideas of limits and continuity and an ability to calculate with them and apply them.
CO2 : Improve the knowledge in algebraic manipulation.
CO3 : Have fluency in differentiation.
CO4 : Have fluency in integration using standard methods, including the ability to find an appropriate method for a given integral.
CO5 : Familiarize the ideas of differential equations and facility in solving simple standard examples.

PH7151 **ENGINEERING PHYSICS** **L T P C**
(Common to all branches of B.E / B.Tech programmes) **3 0 0 3**

OBJECTIVES

- To introduce the concept and different ways to determine moduli of elasticity and applications
- To instill the concept of sound, reverberation, noise cancellation, and ultrasonic

generation, detection and applications

- To inculcate an idea of thermal properties of materials, heat flow through materials and quantum physics
- To promote the basic understanding of interferometers, principles and applications of lasers, optical fibers and sensors
- To establish a sound grasp of knowledge on the basics, significance and growth of single crystals

UNIT I PROPERTIES OF MATTER 9

Elasticity – Poisson's ratio and relationship between moduli (qualitative) - stress-strain diagram for ductile and brittle materials, uses - factors affecting elastic modulus and tensile strength - bending of beams - cantilever - bending moment - Young's modulus determination - theory and experiment - uniform and non-uniform bending - I shaped girders - twisting couple - hollow cylinder - shaft - torsion pendulum - determination of rigidity modulus- moment of inertia of a body (regular and irregular).

UNIT II ACOUSTICS AND ULTRASONICS 9

Classification of sound - loudness and intensity - Weber-Fechner Law - standard intensity and intensity level - decibel - reverberation - reverberation time - calculation of reverberation time for different types of buildings – sound absorbing materials - factors affecting acoustics of buildings : focussing, interference, echo, echelon effect, resonance - noise and their remedies. Ultrasonics: production - magnetostriction and piezoelectric methods - detection of ultrasound - acoustic grating – ultrasonic interferometer - industrial applications – Non-destructive testing - ultrasonic method: scan modes and practice.

UNIT III THERMAL AND MODERN PHYSICS 9

Thermal expansion - thermal stress - expansion joints - bimetallic strips - thermal conductivity- heat conductions in solids – flow of heat through compound media - Forbe's and Lee's disc method: theory and experiment- Black body radiation – Planck's theory (derivation) – Compton effect – wave model of radiation and matter – Schrödinger's wave equation – time dependent and independent equations – Physical significance of wave function – particle in a one dimensional box.

UNIT IV APPLIED OPTICS 9

Interference - Michelson interferometer: construction, working, determination of wave length and thickness - anti-reflection coating - air wedge and its applications - Lasers – principle and applications – Einstein's coefficients – CO2 and Nd:YAG laser - semiconductor lasers: homo junction and hetro junction - construction and working – applications. Optical fibres - classification (index & mode based) - principle and propagation of light in optical fibres - acceptance angle and numerical aperture - fibre optic communication system - active and passive sensors.

UNIT V CRYSTAL PHYSICS 9

Single crystalline, polycrystalline and amorphous materials – Single crystals: unit cell, crystal systems, Bravais lattices, ditections and planes in a crystal, Miller indices - interplanar distance for a cubic crystal - coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures - structure and significance of NaCl, CsCl, ZnS and graphite - crystal imperfections: point defects, line defects – Burger vectors, dislocations and stacking faults – Growth of single crystals: Bridgman and Czochralski methods.

TOTAL: 45 PERIODS

Course Outcomes

Upon Completion of the course, the students will be able to:

CO1 : Understand different moduli of elasticity, their determination and applications.

CO2 : Understand fundamental physical principles underlying the generation and propagation of sound waves in gas and liquid

CO3 : Apply the knowledge of basic quantum mechanics, to set up one dimensional Schrodinger's wave equation and its application to matter wave system

CO4 : Describe the basic laser physics, working of lasers, holography and principle of propagation of light in optical fibers

CO5 : Recognize various planes in a crystal and describe the structure determination using xrays. growing single crystals

CY7151 ENGINEERING CHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVE

- To develop an understanding about fundamentals of polymer chemistry.
- Brief elucidation on surface chemistry and catalysis.
- To develop sound knowledge photochemistry and spectroscopy.
- To impart basic knowledge on chemical thermodynamics.
- To understand the basic concepts of nano chemistry

UNIT I POLYMER CHEMISTRY **9**

Introduction: Functionality-degree of polymerization. Classification of polymers- natural and synthetic, thermoplastic and thermosetting. Types and mechanism of polymerization: addition

(free radical, cationic, anionic and living); condensation and copolymerization. Properties of polymers: Tg, tacticity, molecular weight-weight average, number average and polydispersity index. Techniques of polymerization: Bulk, emulsion, solution and suspension.

UNIT II SURFACE CHEMISTRYAND CATALYSIS 9

Adsorption-Types of adsorption-adsorption of gases on solids- adsorption from solutions- Types of isotherms–Frendlich adsorption isotherm, Langmuir adsorption isotherm. Industrial applications of adsorption. Catalysis: Characteristics and types of catalysts-homogeneous and heterogeneous, auto catalysis. Enzyme catalysis -factors affecting enzyme catalysis, Michaelis-Menton equation. Industrial applications of catalysts.

UNIT III PHOTOCHEMISTRY AND SPECTROSCOPY 9

Photochemistry: Laws of photochemistry-Grotthuss-Draper law, Stark-Einstein law and Lambert-Beer Law. Photo processes-internal conversion, inter-system crossing, fluorescence, phosphorescence, chemiluminescence and photo-sensitization. Spectroscopy: Electromagnetic spectrum-absorption of radiation-electronic, vibrational and rotational transitions. Width and intensities of spectral lines. Spectrophotometric estimation of iron. UV-Vis and IR spectroscopy-principles, instrumentation (Block diagram) and applications.

UNIT IV CHEMICAL THERMODYNAMICS 9

Second law: Entropy-entropy change for an ideal gas, reversible and irreversible processes; entropy of phase transitions; Free energy and work function: Helmholtzand Gibbs free energy functions; Criteria of spontaneity; Gibbs-Helmholtz equation; Clausius Clapeyron equation; Maxwell relations-Van't Hoff isotherm and isochore. Chemical potential; Gibbs-Duhem equation-variation of chemical potential with temperature and pressure.

UNIT V NANOCHEMISTRY 9

Basics-distinction between molecules, nanoparticles and bulk materials; size-dependent properties. Preparation of nanoparticles – sol-gel and solvothermal. Preparation of carbon nanotube by chemical vapour deposition and laser ablation. Preparation of nanowires by VLS growth, electrochemical deposition and electro spinning. Properties and uses of nanoparticles, nanoclusters, nanorods, nanotubes and nanowires.

TOTAL: 45 PERIODS

Course Outcomes

Upon the completion of the course the students will be able to

CO1 : Get familiar with polymer chemistry, surface chemistry and catalysis.
CO2 : Know the photochemistry, spectroscopy and chemical thermodynamics.
CO3 : Know the fundamentals of nano chemistry.
CO4 : Understand the modified chemical or physical properties of the nano structured material
CO5 : Comprehend the concept of structure and concept of polymers

GE7152 ENGINEERING GRAPHICS

L	T	P	C
3	2	0	4

OBJECTIVE

- To develop in students, graphic skills for communication of concepts, ideas and design of engineering products and expose them to existing national standards related to technical drawings - mechanical

CONCEPTS AND CONVENTIONS (NOT FOR EXAMINATION) 1

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANE CURVES AND FREE HANDSKETCHING 14

Basic Geometrical constructions, Curves used in engineering practices-Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles – Representation of Three Dimensional objects – Layout of views- Free hand sketching of multiple views from pictorial views of objects

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACES 14

Orthographic projection- principles-Principal planes-First angle projection-Projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes-Determination of true lengths and true inclinations by rotating line method and trapezoidal method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT III PROJECTION OF SOLIDS 14

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both the principal planes by rotating object method and auxiliary plane method.

UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OFSURFACES 14

Sectioning of solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section.
Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones. Development of lateral surfaces of solids with cut-outs and holes

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 15

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions and miscellaneous problems.
Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method and vanishing point method.

COMPUTER AIDED DRAFTING (DEMONSTRATION ONLY) 3

Introduction to drafting packages and demonstration of their use.

L=45+T=30, TOTAL: 75 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Draw free hand sketching of basic geometrical shapes and multiple views of objects.
CO2 : Draw orthographic projections of lines and planes
CO3 : Draw orthographic projections of solids
CO4 : Draw development of the surfaces of objects
CO5 : Draw isometric and perspective views of simple solids.

BS7161	BASIC SCIENCES LABORATORY	L	T	P	C
	(Common to all branches of B.E. / B.Tech Programmes)	**0**	**0**	**4**	**2**

PHYSICS LABORATORY: (Any Seven Experiments)

OBJECTIVE:

- To inculcate experimental skills to test basic understanding of physics of materials including properties of matter, thermal and optical properties.
- To induce the students to familiarize with experimental determination of velocity of ultrasonic waves, band gap determination and viscosity of liquids.

1. Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of disc
2. Non-uniform bending - Determination of young’s modulus
3. Uniform bending – Determination of young’s modulus
4. Lee’s disc Determination of thermal conductivity of a bad conductor
5. Potentiometer-Determination of thermo e.m.f of a thermocouple
6. Laser- Determination of the wave length of the laser using grating
7. Air wedge - Determination of thickness of a thin sheet/wire
8. a) Optical fibre -Determination of Numerical Aperture and acceptance angle
   b) Compact disc- Determination of width of the groove using laser.
9. Acoustic grating- Determination of velocity of ultrasonic waves in liquids.
10. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids
11. Post office box -Determination of Band gap of a semiconductor.
12. Spectrometer- Determination of wavelength using gating.
13. Viscosity of liquids - Determination of co-efficient of viscosity of a liquid by Poiseuille‟s flow

CHEMISTRY LABORATORY:

(Minimum of 8 experiments to be conducted)

1. Estimation of HCl using Na_2CO_3 as primary standard and Determination of alkalinity in water sample.
2. Determination of total, temporary & permanent hardness of water by EDTA method.
3. Determination of DO content of water sample by Winkler's method.
4. Determination of chloride content of water sample by argentometric method.
5. Estimation of copper content of the given solution by Iodometry.
6. Determination of strength of given hydrochloric acid using pH meter.
7. Determination of strength of acids in a mixture of acids using conductivity meter.
8. Estimation of iron content of the given solution using potentiometer.
9. Estimation of iron content of the water sample using spectrophotometer (1, 10-Phenanthroline/thiocyanate method).
10. Estimation of sodium and potassium present in water using flame photometer.
11. Determination of molecular weight of poly vinyl alcohol using Ostwald viscometer.
12. Pseudo first order kinetics-ester hydrolysis.
13. Corrosion experiment-weight loss method.
14. Determination of CMC.
15. Phase change in a solid.

TOTAL: 60 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Use the different measuring devices and meters to record the data with precision
CO2 : Identify the properties of liquids by applying various methods
CO3 : Identify the properties of materials using the principles of optics and thermal physics
CO4 : Apply different methods to record the contents of water sample
CO5 : Record the phase changes of solid

GE7162 ENGINEERING PRACTICES LABORATORY L T P C
(Common to all Branches of B.E. / B.Tech. Programmes) 0 0 4 2

OBJECTIVE

To provide exposure to the students with hands-on experience on various Basic Engineering Practices in Civil, Mechanical, Electrical and Electronics Engineering

GROUP – A (CIVIL & ELECTRICAL)

1. CIVIL ENGINEERING PRACTICES 15

PLUMBING

Basic pipe connections involving the fittings like valves, taps, coupling, unions, reducers, elbows and other components used in household fittings. Preparation of plumbing line sketches.

- Laying pipe connection to the suction side of a pump.
- Laying pipe connection to the delivery side of a pump.
- Practice in connecting pipes of different materials: Metal, plastic and flexible pipes used in household appliances.

WOOD WORK

Sawing, planing and making joints like T-Joint, Mortise and Tenon joint and Dovetail joint.

STUDY

- Study of joints in door panels and wooden furniture
- Study of common industrial trusses using models.

2. ELECTRICAL ENGINEERING PRACTICES 15

- Basic household wiring using Switches, Fuse, Indicator and Lamp etc.,
- Stair case light wiring
- Tube – light wiring
- Preparation of wiring diagrams for a given situation.
- Study of Iron-Box, Fan Regulator and Emergency Lamp

GROUP – B (MECHANICAL AND ELECTRONICS) 15

3. MECHANICAL ENGINEERING PRACTICES

WELDING

- Arc welding of Butt Joints, Lap Joints, and Tee Joints
- Gas welding Practice.
- Basic Machining - Simple turning, drilling and tapping operations.
- Study and assembling of the following:
    a. Centrifugal pump
    b. Mixie
    c. Air Conditioner.

DEMONSTRATION ON FOUNDRY OPERATIONS.

4. ELECTRONIC ENGINEERING PRACTICES 15

- Soldering simple electronic circuits and checking continuity.
- Assembling electronic components on a small PCB and Testing.

- Study of Telephone, FM radio and Low Voltage Power supplies.

TOTAL: 60 PERIODS

Course Outcomes MECHANICAL

Upon completion of this course, the students will be able to:

CO1 : Draw pipe line plan; lay and connect various pipe fittings used in common household plumbing work; Saw; plan; make joints in wood materials used in common household wood work.

CO2 : Wire various electrical joints in common household electrical wirework.

CO3 : Weld various joints in steel plates using arc welding work; Machine various simple processes like turning, drilling, tapping in parts.

CO4 : Assemble simple mechanical assembly of common household equipment's; Make a tray out of metal sheet using sheet metalwork.

CO5 : Solder and test simple electronic circuits; Assemble and test simple electronic components on PCB.

HS7251 **TECHNICAL ENGLISH** **L T P C**
4 0 0 4

OBJECTIVES

- To enable students acquire proficiency in technical communication.
- To enhance their reading and writing skills in a technical context.
- To teach various language learning strategies needed in a professional environment.

UNIT I ANALYTICAL READING **12**

Listening- Listening to informal and formal conversations; Speaking – Conversation Skills(opening, turn taking, closing)-explaining how something works-describing technical functions and applications; Reading –Analytical reading, Deductive and inductive reasoning; Writing- vision statement–structuring paragraphs.

UNIT II SUMMARISING **12**

Listening- Listening to lectures/ talks on Science & Technology; **Speaking** –Summarizing/

Oral Reporting, **Reading** – Reading Scientific and Technical articles; **Writing**- Extended definition –Lab Reports — Summary writing.

UNIT III DESCRIBING VISUAL MATERIAL 12

Listening- Listening to a panel discussion; Speaking – Speaking at formal situations; Reading – Reading journal articles - Speed reading; Writing-data commentary-describing visual material-writing problem-process- solution-the structure of problem-solution texts- writing critiques

UNIT IV WRITING/ E-MAILING THE JOB APPLICATION 12

Listening- Listening to/ Viewing model interviews; Speaking –Speaking at different types of interviews – Role play practice (mock interview); Reading – Reading job advertisements and profile of the company concerned; Writing- job application – cover letter –Résumé preparation.

UNIT V REPORT WRITING 12

Listening- Viewing a model group discussion; Speaking –Participating in a discussion - Presentation; Reading – Case study - analyse -evaluate – arrive at a solution; Writing– Recommendations- Types of reports (feasibility report)- designing and reporting surveys- – Report format - writing discursive essays.

TEACHING METHODS:

Practice writing
Conduct model and mock interview and group discussion.
Use of audio – visual aids to facilitate understanding of various forms of technical communication. Interactive sessions.

EVALUATION PATTERN:

Internals – 50%
End Semester – 50%

TOTAL: 60 PERIODS

Course Outcomes

Upon Completion of the course, the students will be able to:

CO1 : Learn the structure and organization of various forms of technical communication
CO2 : Listen and respond to technical content.
CO3 : Use different forms of communication in their respective fields.
CO4 : Communicate well during job interview
CO5 : Demonstrate writing skills for technical reports and job application

MA7251	MATHEMATICS – II (Common to all branches of B.E. / B.Tech. Programmes in II Semester)	L	T	P	C
		4	0	0	4

OBJECTIVES

- To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- To acquaint the student with the concepts of vector calculus, needed for problems in all engineering disciplines.
- To develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence, in application areas such as heat conduction, elasticity, fluid dynamics and flow of the electric current.
- To make the student appreciate the purpose of using transforms to create a new domain in which it is easier to handle the problem that is being investigated.

UNIT I MATRICES **12**

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of eigenvalues and eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

UNIT II VECTOR CALCULUS **12**

Gradient and directional derivative – Divergence and Curl – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Area of a curved surface - Volume integral - Green's, Gauss divergence and Stoke's theorems – Verification and application in evaluating line, surface and volume integrals..

UNIT III ANALYTIC FUNCTION **12**

Analytic functions – Necessary and sufficient conditions for analyticity - Properties – Harmonic conjugates – Construction of analytic function - Conformal mapping – Mapping by functions. Error! Objects cannot be created from editing field codes.
transformation.

UNIT IV COMPLEX INTEGRATION **12**

Line integral - Cauchy's integral theorem – Cauchy's integral formula – Taylor's and Laurent's series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semicircular contour with no pole on real axis.

UNIT V LAPLACE TRANSFORMS **12**

Existence conditions – Transforms of elementary functions – Transform of unit step function and unit impulse function – Basic properties – Shifting theorems -Transforms of derivatives and integrals – Initial and final value theorems – Inverse transforms – Convolution theorem – – Transform of periodic functions – Application to solution of linear ordinary differential equations with constant coefficients.

TOTAL: 60 PERIODS

Course Outcomes

Upon successful completion of the course, students should be able to:

CO1 : Evaluate real and complex integrals using the Cauchy integral formula and the residue theorem

CO2 : Appreciate how complex methods can be used to prove some important theoretical results.

CO3 : Evaluate line, surface and volume integrals in simple coordinate systems

CO4 : Calculate grad, div and curl in Cartesian and other simple coordinate systems, and establish identities connecting these quantities

CO5 : Use Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.

PH7251	MATERIALS SCIENCE (Common to Manufacturing, Industrial, Mining, Aeronautical, Automobile and Production Engineering)	L	T	P	C
		3	0	0	3

OBJECTIVE

- To impart knowledge on the basics of binary phase diagrams and their applications
- To learn the phase diagram, effect of alloying elements and various transformations in the Fe-C system, and also the heat treatment of steels.
- To introduce various strengthening methods of materials, and also various mechanical properties and their measurement
- To instill the types, properties and applications of magnetic, dielectric and superconducting materials.
- To introduce the preparation, properties and applications of various new materials.

UNIT I PHASE DIAGRAMS 9

Solid solutions - Hume Rothery's rules - The phase rule - single component system - one-component system of iron - binary phase diagrams - isomorphous systems - the tie-line rule - the lever rule - application to isomorphous system - eutectic phase diagram - peritectic phase diagram

- other invariant reactions – free energy composition curves for binary systems - microstructural change during cooling.

UNIT II FERROUS ALLOYS AND HEAT TREATMENT 9

The iron-carbon equilibrium diagram - phases, invariant reactions - microstructure of slowly cooled steels - eutectoid steel, hypo and hypereutectoid steels - effect of alloying elements on the Fe-C system - diffusion in solids - Fick's law - phase transformations - T-T-T-diagram for eutectoid steel–pearlitic, bainitic and martensitic transformations - tempering of martensite - heat treatment of steels - annealing - normalizing - quenching and tempering - case hardening - induction, flame and laser hardening - carburizing, cyaniding, carbonitriding and nitriding.

UNIT III MECHANICAL PROPERTIES 9

Tensile test - plastic deformation mechanisms - slip and twinning - role of dislocations in slip - strengthening methods - strain hardening - refinement of the grain size - solid solution strengthening - precipitation hardening - creep resistance - creep curves - mechanisms of creep - creep-resistant materials - fracture - the Griffith criterion - critical stress intensity factor and its determination - fatigue failure - fatigue tests - methods of increasing fatigue life - hardness - Rockwell and Brinell hardness - Knoop and Vickers microhardness.

UNIT IV MAGNETIC, DIELECTRIC AND SUPERCONDUCTING MATERIALS **9**

Ferromagnetism – Domain theory – types of energy – hysteresis – hard and soft magnetic materials – ferrites - dielectric materials – types of polarization – Langevin-Debye equation – frequency effects on polarization - dielectric breakdown – insulating materials – Ferroelectric materials - superconducting materials, properties, types and applications.

UNIT V NEW MATERIALS **9**

Ceramics – types and applications – Composites: classification, role of matrix and reinforcement – processing of fiber reinforced plastics – Metallic glasses – types , glass forming ability of alloys – Inoue criteria – melt spinning process – applications - Shape memory alloys – phases, shape memory effect, pseudoelastic effect – NiTi alloy – applications- Nanomaterials – preparation: ball milling and chemical vapour deposition - properties and applications – carbon nanotubes - Biomaterials

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will

CO1 : Gain knowledge on the basics of binary phase diagrams and the use of lever rule

CO2 : Learn about the Fe-C phase diagram, effect of alloying elements, TTT in the Fe-C system, and also the heat treatment of steels.

CO3 : Understand the significance of dislocations, strengthening mechanisms, and tensile, creep, hardness and fracture behaviour of materials

CO4 : Acquire knowledge on the types, properties and applications of magnetic, dielectric and superconducting materials.

CO5 : Get adequate understanding on the preparation, properties and applications of ceramics, composites, metallic glasses, shape-memory alloys and nanomaterials.

EE7151 BASIC ELECTRICAL AND ELECTRONICS ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVE

- To impart the knowledge on basic concepts of electrical circuits and electrical machines.
- To impart the knowledge on basic concepts of electronic components, devices and circuits

UNIT I BASIC CONCEPTS AND DC CIRCUITS 9

Ohm's law - Electrical resistance - Series /Parallel resistive circuits - Star/Delta transformations - Kirchoff's law - Node and Mesh analysis - Thevenin's and Norton's theorem.

UNIT II A.C.CIRCUITS 9

RMS and average value of periodic waves - Form factor - Phase and Phase difference - Simple RC.RL and RLC circuits - series and parallel resonance - power and power factor - introduction to three phase systems – power measurement in 3 phase system.

UNIT III D.C. MACHINES 10

Construction details of DC machines - principle of operation of DC generator - EMF equation - principle of DC motor - Back EMF - Voltage and torque equation - Principle of transformer - construction and type - EMF equation - Tests on transformer - Equivalent circuit - Induction motor - Construction and basic principle of operation - Starting and Running torques.

UNIT IV ELECTRONIC COMPONENTS AND DEVICES 9

Operating principle and characteristics of Simple PN Junction Diodes, Zener diode, Bipolar Junction transistor - Field Effect Transistors – UJT – SCR.

UNIT V ANALOG CIRCUITS 8

Rectifier and Power Supply Circuits, clipper, clamper using diodes, Operational Amplifiers (Ideal) - properties and typical circuits like differentiator, integrator, summer, comparator.

TOTAL: 45 PERIODS

Course Outcomes

CO1 : To be able to understand the concepts related with electrical circuits and wiring.
CO2 : To be able to study the different three phase connections and the concepts of magnetic circuits.
CO3 : Capable of understanding the operating principle of DC machines.
CO4 : To be able to understand the working principle of electronic devices such as diode and zener diode.
CO5 : To be able to understand the characteristics and working of analog circuits

GE7151	COMPUTING TECHNIQUES	L	T	P	C
	(Common to all branches of Engineering and Technology)	**3**	**0**	**0**	**3**

OBJECTIVE

- To learn programming using a structured programming language.
- To provide C programming exposure.
- To introduce foundational concepts of computer programming to students of different branches of Engineering and Technology.

UNIT I INTRODUCTION **9**

Introduction to Computers – Computer Software – Computer Networks and Internet - Need for logical thinking – Problem formulation and development of simple programs - Pseudo code - Flow Chart and Algorithms.

UNIT II C PROGRAMMING BASICS **9**

Introduction to C programming – Fundamentals – Structure of a C program – Compilation and linking processes - Constants, Variables – Data Types – Expressions - Operators –Decision Making and Branching – Looping statements – Solving Simple Scientific and Statistical Problems.

UNIT III ARRAYS AND STRINGS **9**

Arrays – Initialization – Declaration – One dimensional and two dimensional arrays - Strings- String operations – String Arrays - simple programs- sorting- searching – matrix operations.

UNIT IV POINTERS **9**

Macros - Storage classes –Basic concepts of Pointers– Pointer arithmetic - Example Problems - Basic file operations

UNIT V FUNCTIONS AND USER DEFINED DATA TYPES **9**

Function – definition of function – Declaration of function – Pass by value – Pass by reference – Recursion –Enumerators – Structures - Unions

TOTAL: 45 PERIODS

Course Outcomes

At the end of the course, the student should be able to:

CO1 : Write C program for simple applications
CO2 : Formulate algorithm for simple problems
CO3 : Analyse different data types and arrays
CO4 : Perform simple search and sort.
CO5 : Use programming language to solve problems

GE7153 ENGINEERING MECHANICS

L	T	P	C
4	0	0	4

OBJECTIVE

- The objective of this course is to inculcate in the student the ability to Analyse any problem in a simple and logical manner and to predict the physical phenomena and thus lay the foundation for engineering applications.

UNIT I STATICS OF PARTICLES **12**

Fundamental Concepts and Principles, Systems of Units, Method of Problem Solutions,Statics of Particles -Forces in a Plane, Resultant of Forces, Resolution of a Force into Components, Rectangular Components of a Force, Unit Vectors.

Equilibrium of a Particle- Newton’s First Law of Motion, Space and Free-Body Diagrams, Forces in Space, Equilibrium of a Particle in Space.

UNIT II EQUILIBRIUM OF RIGID BODIES 12

Principle of Transmissibility, Equivalent Forces, Vector Product of Two Vectors, Moment of a Force about a Point ,Varignon's Theorem, Rectangular Components of the Moment of a Force, Scalar Product of Two Vectors, Mixed Triple Product of Three Vectors, Moment of a Force about an Axis, Couple - Moment of a Couple, Equivalent Couples, Addition of Couples, Resolution of a Given Force into a Force -Couple system, Further Reduction of a System of Forces, Equilibrium in Two and Three Dimensions - Reactions at Supports and Connections.

UNIT III DISTRIBUTED FORCES 12

Centroids of lines and areas – symmetrical and unsymmetrical shapes, Determination of Centroids by Integration , Theorems of Pappus-Guldinus, Distributed Loads on Beams, Center of Gravity of a Three-Dimensional Body, Centroid of a Volume, Composite Bodies , Determination of Centroids of Volumes by Integration.

Moments of Inertia of Areas and Mass - Determination of the Moment of Inertia of an Area by Integration , Polar Moment of Inertia , Radius of Gyration of an Area , Parallel-Axis Theorem , Moments of Inertia of Composite Areas, Moments of Inertia of a Mass - Moments of Inertia of Thin Plates , Determination of the Moment of Inertia of a Three-Dimensional Body by Integration.

UNIT IV FRICTION 12

The Laws of Dry Friction. Coefficients of Friction, Angles of Friction, Wedges, Wheel Friction. Rolling Resistance , Ladder friction.

UNIT V DYNAMICS OF PARTICLES 12

Kinematics - Rectilinear Motion and Curvilinear Motion of Particles.

Kinetics- Newton's Second Law of Motion -Equations of Motions , Dynamic Equilibrium, Energy and Momentum Methods - Work of a Force , Kinetic Energy of a Particle, Principle of Work and Energy, Principle of Impulse and Momentum, Impact, Method of Virtual Work -

Work of a Force, Potential Energy, Potential Energy and Equilibrium.

L – 45 + T – 15 TOTAL: 60 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Apply the various methods to determine the resultant forces and its equilibrium acting on a particle in 2D and 3D.

CO2 : Apply the concept of reaction forces (non-concurrent coplanar and noncoplanar forces) and moment of various support systems with rigid bodies in 2D and 3D in equilibrium. Reducing the force, moment, and couple to an equivalent force - couple system acting on rigid bodies in 2D and 3D.

CO3 : Apply the concepts of locating centroids / center of gravity of various sections / volumes and to find out area moments of inertia for the sections and mass moment of inertia of solids.

CO4 : Apply the concepts of frictional forces at the contact surfaces of various engineering systems.

CO5 : Apply the various methods of evaluating kinetic and kinematic parameters of the rigid bodies subjected to concurrent coplanar forces.

EE7261 ELECTRICAL AND ELECTRONIC ENGINEERING LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVE

To train the students in performing various tests on electrical drives, sensors and circuits.

LIST OF EXPERIMENTS:

1. Load test on separately excited DC shunt generator
2. Load test on DC shunt moor
3. Load test on S Transformer
4. Load test on Induction motor
5. Regulation of 3 Alternator
6. Study of CRO
7. Logic gates
8. Operational amplifiers
9. Time constant of RC circuit
10. Characteristics of LVDT
11. Calibration of Rotometer

12. RTD and Thermistor
13. Flapper Nozzle system

TOTAL: 60 PERIODS

Course Outcomes

At the end of the course, the student should be able to:

CO1 : Perform test on DC shunt generator and DC shunt moor
CO2 : Load test on transformer and induction motor
CO3 : Understand the CRO
CO4 : Understand time constant of RC circuit and Characteristics of LVDT
CO5 : Execute test on RTD and Thermistor

GE7161 COMPUTER PRACTICES LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To understand the basic programming constructs and articulate how they are used to develop a program with a desired runtime execution flow.
- To articulate where computer programs fit in the provision of computer-based solutions to real world problems.
- To learn to use user defined data structures.

LIST OF EXPERIMENTS

1. Search, generate, manipulate data using MS office/ Open Office
2. Presentation and Visualization – graphs, charts, 2D, 3D
3. Problem formulation, Problem Solving and Flowcharts
4. C Programming using Simple statements and expressions
5. Scientific problem solving using decision making and looping.
6. Simple programming for one dimensional and two dimensional arrays.
7. Solving problems using String functions
8. Programs with user defined functions
9. Program using Recursive Function
10. Program using structures and unions.

TOTAL: 60 PERIODS

Course Outcomes

At the end of the course, the student should be able to:

CO1 : Write and compile programs using C programs.
CO2 : Write program with the concept of Structured Programming
CO3 : Identify suitable data structure for solving a problem
CO4 : Demonstrate the use of conditional statement.
CO5 : Create applications using user defined data structures and string functions

LABORATORY REQUIREMENTS FOR BATCH OF 30 STUDENTS

30 Systems with C compiler

CE7251 STRENGTH OF MATERIALS

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

The main learning objective of this course is to prepare students for:

1. Applying the principle concepts behind stress, strain and deformation of solids for various engineering applications.
2. Analysing the transverse loading on beams and stresses in beam for various engineering applications.
3. Analysing the torsion principles on shafts and springs for various engineering applications.
4. Analysing the deflection of beams for various engineering applications.
5. Analysing the thin and thick shells and principal stresses in beam for various engineering applications

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 9

Rigid bodies and deformable solids – Tension, Compression and Shear Stresses – Deformation of simple and compound bars – Thermal stresses – Elastic constants – Volumetric strains – Stresses on inclined planes – principal stresses and principal planes–Mohr's circle of stress.

UNIT II TRANSVERSE LOADING ON BEAMS AND STRESSES IN BEAM 9

Beams – types transverse loading on beams – Shear force and bending moment in beams – Cantilevers – Simply supported beams and over – hanging beams. Theory of simple bending – bending stress distribution – Load carrying capacity – Proportioning of sections – Flitched beams – Shear stress distribution.

UNIT III TORSION **9**

Torsion formulation stresses and deformation in circular and hollows shafts – Stepped shafts – Deflection in shafts fixed at the both ends – Stresses in helical springs – Deflection of helical springs, carriage springs.

UNIT IV DEFLECTION OF BEAMS **9**

Double Integration method – Macaulay's method – Area moment Theorems for computation of slopes and deflections in beams - Conjugate beam and strain energy – Maxwell's reciprocal theorems.

UNIT V THIN CYLINDERS, SPHERES AND THICK CYLINDERS **9**

Stresses in thin cylindrical shell due to internal pressure circumferential and longitudinal stresses and deformation in thin cylinders – spherical shells subjected to internal pressure – Deformation in spherical shells – Lame's theory – Application of theories of failure

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Apply the principle concepts behind stress, strain and deformation of solids for various engineering applications.

CO2 : Analyse the transverse loading on beams and stresses in beam for various engineering applications.

CO3 : Analyse the torsion principles on shafts and springs for various engineering applications.

CO4 : Analyse the deflection of beams for various engineering applications.

CO5 : Analyse the thin and thick shells and principal stresses in beam for various engineering applications.

CE7352 FLUID MECHANICS AND MACHINERY

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To introduce the students about properties of the fluids, behaviour of fluids under static conditions
- To impart basic knowledge of the dynamics of fluids
- To expose to the applications of the conservation laws to a) flow measurements b) flow through pipes (both laminar and turbulent) and c) forces on pipe bends with an exposure to the significance of boundary layer theory and its thicknesses
- To expose the basic principles of working of hydraulic machineries
- To design Pelton wheel, Francis and Kaplan turbine, centrifugal and reciprocating pumps.

UNIT I FLUID PROPERTIES AND FLOW CHARACTERISTICS 9

Units and dimensions- Properties of fluids- mass density, specific weight, specific volume, specific gravity, viscosity, compressibility, vapor pressure, capillarity and surface tension. Flow characteristics – concept of control volume - application of control volume to continuity equation, energy equation and momentum equation.

UNIT II FLOW THROUGH CIRCULAR CONDUITS 9

Hydraulic and energy gradient - Laminar flow through circular conduits and circular annuli- Boundary layer concepts – types of boundary layer thickness – Darcy Weisbach equation – friction factor- Moody diagram- commercial pipes- minor losses – Flow through pipes in series and parallel.

UNIT III DIMENSIONAL ANALYSIS 9

Need for dimensional analysis – methods of dimensional analysis – Similitude –types of similitude - Dimensionless parameters- application of dimensionless parameters – Model analysis.

UNIT IV PUMPS 9

Impact of jets - Euler’s equation - Theory of rotodynamic machines - various efficiencies - velocity components at entry and exit of the rotor - velocity triangles - Centrifugal pumps - working principle - work done by the impeller - performance curves - Reciprocating pump - working principle - indicator diagram - work saved by fitting air vessels - Rotary pumps - classification - comparison of working principle with other pumps - advantages.

UNIT V TURBINES 9

Classification of turbines – heads and efficiencies – velocity triangles – axial, radial and mixed flow turbines – Pelton wheel and Francis turbine - working principles - work done by water on the runner – draft tube - specific speed - unit quantities – performance curves for turbines – governing of turbines

TOTAL: 45 PERIODS

Course Outcomes

On completion of the course, the student is expected to be able to

CO1 : Understand the difference between solid and fluid, its properties and behaviour in static conditions.

CO2 : Understand the conservation laws applicable to fluids and its application through fluid kinematics and dynamics.

CO3 : Formulate the relationship among the parameters involved in the given fluid phenomenon and to predict the performances of prototype by model studies.

CO4 : Estimate losses in pipelines for both laminar and turbulent conditions and analysis of pipes connected in series and parallel.

CO5 : Understand the concept of boundary layer and its application to find the drag force excreted by the fluid on the flat solid surface.

GE7251 ENVIRONMENTAL SCIENCE AND ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVE

- To the study of nature and the facts about environment.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To study the dynamic processes and understand the features of the earth’s interior and surface.

- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.

UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY 14

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.

Field study of common plants, insects, birds

Field study of simple ecosystems – pond, river, hill slopes, etc

UNIT II ENVIRONMENTAL POLLUTION 8

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c)Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards– soil waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides.

Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

UNIT III NATURAL RESOURCES 10

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles.

Field study of local area to document environmental assets – river / forest / grassland / hill / mountain.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT 7

From unsustainable to sustainable development – urban problems related to energy –water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmentalorganization- environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act– Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution)

act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT 6

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course the student shall be able to:

CO1 : Explain the concept of an ecosystem, its structure and function, including the roles of producers, consumers, and decomposers.

CO2 : Identify the causes, effects, and control measures for different types of pollution.

CO3 : Analyse the impact of human activities on various natural resources and propose solutions for sustainable use.

CO4 : Evaluate the effectiveness of different environmental policies and propose alternative solutions for social issues related to the environment.

CO5 : Develop an action plan to address a specific environmental challenge related to human population growth in their community.

MA7357 **PROBABILITY AND STATISTICS** **L T P C**
4 0 0 4

OBJECTIVE

1. To make the students acquire a sound knowledge in statistical techniques that model engineering problems.
2. The Students will have a fundamental knowledge of the concepts of probability.

UNIT I RANDOM VARIABLES 12

Discrete and Continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma, Weibull and Normal distributions Functions of a random variable.

UNIT II TWO-DIMENSIONAL RANDOM VARIABLES 12

Joint distributions – Marginal and Conditional distributions – Covariance – Correlation and Linear regression – Transformation of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT III TESTS OF SIGNIFICANCE 12

Sampling distributions – Tests for single mean, proportion, Difference of means (large and small samples) – Tests for single variance and equality of variances – $\chi 2$-test for goodness of fit – Independence of attributes – Non-parametric tests: Test for Randomness and Rank-sum test (Wilcoxon test).

UNIT IV DESIGN OF EXPERIMENTS 12

Completely randomized design – Randomized block design – Latin square design – 2^2 – factorial design – Taguchi's robust parameter design.

UNIT V STATISTICAL QUALITY CONTROL 12

Control charts for measurements (X and R charts) – Control charts for attributes (p, c and np charts) – Tolerance limits – Acceptance sampling.

TOTAL: 60 PERIODS

Course Outcomes

Upon the completion of this course, the students will be able to

CO1 : Characterize probability models using probability mass (density) functions & cumulative distribution functions.
CO2 : Understand two-dimensional random variables
CO3 : Apply tests of significance
CO4 : Conduct experiments based on Design of Experiments
CO5 : Participate in the processes of analysis, planning, formulating strategies of development, decision-making, governing and management, and independent making of tactical and strategic decisions related to the statistics.

ME7351 DESIGN CONCEPTS IN ENGINEERING

L	**T**	**P**	**C**
3	**0**	**0**	**3**

COURSE OBJECTIVES:

The main learning objective of this course is to prepare the students for:

1. Analysing the various design requirements and get acquainted with the processes involved in product development.
2. Applying the design processes to develop a successful product
3. Applying scientific approaches to provide design solutions
4. Designing solution through relate the human needs and provide a solution

UNIT I DESIGN TERMINOLOGY **9**

Definition-various methods and forms of design-importance of product design-static and dynamic products-various design projects-morphology of design-requirements of a good design-concurrent engineering-computer aided engineering-codes and standards-product and process cycles-bench marking.

UNIT II DESIGN PROCESS **9**

Basic modules in design process-scientific method and design method-Need identification, importance of problem definition-structured problem, real life problem- information gathering - customer requirements- Quality Function Deployment (QFD)- product design specifications-generation of alternative solutions- Analysis and selection-Detail design and drawings-Prototype, modeling, simulation, testing and evaluation.

UNIT III CREATIVITY IN DESIGN **9**

Creativity and problem solving-vertical and lateral thinking-invention-psychological view, mental blocks-Creativity methods-brainstorming, synectics, force fitting methods, mind map, concept

map- Theory of innovative problem solving (TRIZ) - conceptual decomposition creating design concepts.

UNIT IV HUMAN AND SOCIETAL ASPECTS 9

Human factors in design, ergonomics, user friendly design-Aesthetics and visual aspects environmental aspects-marketing aspects-team aspects-legal aspects-presentation aspects

UNIT V MATERIAL AND PROCESSES IN DESIGN 9

Material selection for performance characteristics of materials-selection for new design substitution for existing design-economics of materials-selection methods-recycling and material selection- types of manufacturing process, process systems- Design for Manufacturability (DFM) - Design for Assembly (DFA).

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Articulate the various design requirements and get acquainted with the processes involved in product development.
CO2 : Design the processes to develop a successful product.
CO3 : Implement the scientific approaches to provide design solutions.
CO4 : Integrate human and societal aspects in design.
CO5 : Select materials and manufacturing processes in design.

MF7301	MACHINE TOOLS AND PROCESSES	L	T	P	C
		3	0	0	3

OBJECTIVE

- To identify the necessity of “manufacturing” Define with examples the concept of manufacturing, Machine tools and machining. State with examples the main requirements for “machining” List the main classifications of the manufacturing processes with examples

UNIT I FUNDAMENTALS OF METAL CUTTING 9

Mechanics of orthogonal and oblique cutting - Mechanics of chip formation - Types of chips produced in cutting - Cutting forces and power-Numerical Problems-Temperature in cutting - Machinability-Tool life - Numerical problems - Wear and failure-surface finish and integrity-Cutting Tool Materials-cutting fluids.

UNIT II MACHINE TOOLS AND PROCESSES FOR PRODUCING ROUND SHAPES 9

Turning parameters - Lathes and Lathe operations - Cutting screw threads - Drilling and drills - Drilling machines - Boring and boring machines - reaming and reamers - tapping and taps - Design considerations for drilling, reaming and tapping.

UNIT III MACHINE TOOLS AND PROCESSES FOR PRODUCING VARIOUS SHAPES 9

Milling operations - Milling machines - Planner and shaper: Machines and Operations - Broaching and broaching machines - Sawing - filing and finishing - gear manufactured by machining.

UNIT IV ABRASIVE MACHINING AND FINISHING OPERATIONS 9

Abrasives - bonded abrasives - Grinding process- wheel, gear grinding operations and machines - grinding fluids - Design Consideration for Grinding - Finishing operations: Lapping, Honing, Burnishing- economics of grinding and finishing operation.

UNIT V MACHINE TOOL STRUCTURE AND AUTOMATION 9

Machine tools structures -erecting and testing of machine tools- Vibration and chatters in machining- Automation: Capstan and Turret lathe - single spindle and multi spindle automats - Swiss type and automatic screw machines-Feeding Mechanisms-Transfer mechanism-Tracer controller Mechanism.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the principles of metal cutting mechanics, including chip formation and cutting forces, to optimize machining processes effectively.

CO2 : Analyse the parameters and operations involved in turning, drilling, and tapping to enhance productivity and precision in round shape production.

CO3 : Evaluate milling operations and gear manufacturing techniques to select appropriate processes for producing various shapes efficiently.

CO4 : Apply knowledge of abrasive machining and finishing operations to choose suitable abrasives and optimize grinding processes for desired surface finishes.

CO5 : Create efficient machine tool systems by evaluating structures and automation mechanisms to minimize vibrations and ensure accurate machining operations.

CE7261 STRENGTH OF MATERIALS LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVE

To study the mechanical properties of materials subjected to different types of loading.

LIST OF EXPERIMENTS

1. Tension test on mild steel rod
2. Compression test on wood
3. Double shear test on metal
4. Torsion test on mild steel rod
5. Impact test on metal specimen (Izod and Charpy)
6. Hardness test on metals (Rockwell and Brinell Hardness Tests)
7. Deflection test on metal beam
8. Compression test on helical spring
9. Deflection test on carriage spring

TOTAL: 60 PERIODS

Course Outcomes

On completion of the course, the student is expected to be able to

CO1 : Apply the knowledge of testing steel rod subjected to tension and torsion
CO2 : Explain the hardness of different metals
CO3 : Exert the knowledge about the testing of helical spring and carriage spring
CO4 : Acquire the knowledge about double shear test on metal and impact test on metal.
CO5 : Obtain the practical knowledge about the deflection of the beam.

CE7361 FLUID MECHANICS AND MACHINERY LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVE

- Students should be able to verify the principles studied in theory by performing the experiments in lab.

LIST OF EXPERIMENTS

1. Flow Measurement **32**

1. a. Calibration of Rotometer
   b. Flow through Venturimeter
2. Flow through a circular Orifice
3. Determination of mean velocity by Pitot tube
4. Verification of Bernoulli's Theorem
5. a. Flow through a Triangular Notch
   b. Flow through a Rectangular Notch

2. Losses in Pipes **8**

6. Determination of friction coefficient in pipes
7. Determination of losses due to bends, fittings and elbows

3. Pumps **16**

8. Characteristics of Centrifugal pumps
9. Characteristics of Submersible pump
10. Characteristics of Reciprocating pump

4. Determination of Metacentric height **4**

Demonstration Only

TOTAL: 60 PERIODS

Course Outcomes

Upon the completion of this course, the students will be able to

CO1 : Use the measurement equipment's for flow measurement and Perform test on different fluid machinery.

CO2 : Verify and apply Bernoulli equation for flow measurement like orifice/venturi meter.

CO3 : Measure friction factor in pipes and compare with Moody diagram and verify momentum conservation law.

CO4 : Determine the performance characteristics of rotodynamic pumps.

CO5 : Determine the performance characteristics of positive displacement pumps.

ME7353 MECHANICS OF MACHINES

L	T	P	C
3	0	0	3

OBJECTIVE

- To understand the principles in the formation of mechanisms and their kinematics.
- To understand the effect of friction in different machine elements.
- To Analyse the forces and torque acting on simple mechanical systems
- To understand the importance of balancing and vibration.

UNIT I KINEMATICS OF MECHANISMS **9**

Mechanisms – Terminology and definitions – kinematics inversions of 4 bar and slide crank chain – kinematics analysis in simple mechanisms – velocity and acceleration polygons– Analytical methods – computer approach – cams – classifications – displacement diagrams - layout of plate cam profiles – derivatives of followers motion – circular arc and tangent cams.

UNIT II GEARS AND GEAR TRAINS **9**

Spur gear – law of toothed gearing – involute gearing – Interchangeable gears – Gear tooth action interference and undercutting – nonstandard teeth – gear trains – parallel axis gear trains – Epicyclic gear trains – automotive transmission gear trains.

UNIT III FRICTION IN MACHINE ELEMENTS 9

Surface contacts – Sliding and Rolling friction – Friction drives – Friction in screw threads – Bearings and lubrication – Friction clutches – Belt and rope drives – Friction aspects in brakes– Friction in vehicle propulsion and braking.

UNIT IV FORCE ANALYSIS 9

Applied and Constrained Forces – Free body diagrams – Static Equilibrium conditions – Two, Three and four members – Static Force analysis in simple machine members – Dynamic Force Analysis – Inertia Forces and Inertia Torque – D'Alembert's principle – superposition principle – dynamic Force Analysis in simple machine members

UNIT V BALANCING AND VIBRATION 9

Static and Dynamic balancing – Balancing of revolving and reciprocating masses – Balancing machines – free vibrations – Equations of motion – natural Frequency – Damped Vibration – bending critical speed of simple shaft – Torsional vibration – Forced vibration – harmonic Forcing – Vibration isolation.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Design the linkages and the cam mechanisms for specified output motions.

CO2 : Determine the gear parameters of toothed gearing and speeds of gear trains in various applications.

CO3 : Evaluate the frictional torque in screw threads, clutches, brakes and belt drives.

CO4 : Determine the forces on members of mechanisms during static and dynamic equilibrium conditions.

CO5 : Determine the balancing masses on rotating machineries and the natural frequencies of free and forced vibratory systems.

ME7451	MACHINE DESIGN	L	T	P	C
	(Use of P S G Design Data Book is permitted in the University examination)	3	2	0	4

OBJECTIVE

- To familiarize the various steps involved in the Design Process
- To understand the principles involved in evaluating the shape and dimensions of a component to satisfy functional and strength requirements.
- To learn to use standard practices and standard data
- To learn to use catalogues and standard machine components

UNIT I STEADY STRESSES IN MACHINE MEMBERS 12

Introduction to the design process - factor influencing machine design, selection of materials based on mechanical properties - Preferred numbers, fits and tolerances – Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, eccentric loading -Factor of safety – Curved beams - theories of failure– Design for finite and infinite life under variable loading.

UNIT II SHAFTS, COUPLINGS, JOINTS AND BEARINGS 12

Design of solid and hollow shafts based on strength, rigidity and critical speed –Keys, key ways and splines –Rigid and flexible couplings. Welded joints and riveted joints for structures, Sliding contact and rolling contact bearings (Simple problems).

UNIT III ENERGY STORING ELEMENTS AND ENGINE COMPONENTS 12

Types of springs, Design of helical springs - Flywheels considering stresses in rims and arms for engines and punching machines- Connecting Rods and crank shafts.

UNIT IV DESIGN FOR FLEXIBLE ELEMENTS 12

Design of Flat belts and pulleys - Selection of V belts and pulleys – Design of Transmission chains and Sprockets.

UNIT V SPUR GEARS, HELICAL GEARS AND GEAR BOXES 12

Speed ratios and number of teeth-Force analysis -Tooth stresses - Dynamic effects - Fatigue strength - Factor of safety - Gear materials – Design of straight tooth spur & helical gears based

on strength and wear considerations. Geometric progression - Standard step ratio - Ray diagram, kinematics layout -Design of sliding mesh gear box -Constant mesh gear box. – Design of multi speed gear box for machine tool applications – Variable speed gear box .

L=45+T=30, TOTAL: 75 PERIODS

Course Outcomes

On completion of the course, the student is expected to be able to

CO1 : Design machine members subjected to static loads.

CO2 : Design shafts, couplings, welded joints, riveted joints and bearings for various applications.

CO3 : Design helical springs, flywheels, connecting rods and crankshafts for various applications.

CO4 : Design flexible elements like belt, ropes and chain drives for engineering applications.

CO5 : Design spur ,helical gear drives and multi speed gear box for power transmission.

ME7452 **THERMODYNAMICS** **L T P C**
3 2 0 4

OBJECTIVE

- To understand the basic laws of Thermodynamics and Heat transfer.
- To understand the principle of operation of thermal equipments like IC engine, boilers, turbine and refrigerator etc.

UNIT I BASIC CONCEPTS OF THERMODYNAMICS 12

Thermodynamics and Energy - Systems - Types and properties - State and Equilibrium - Processes and Cycles - Forms of Energy - Temperature and Zeroth law of Thermodynamics - Pure substances - Phase change processes of pure substances - Property diagrams - Internal energy - Enthalpy - Energy transfer by Heat, Work and Mass - Applications.

UNIT II HEAT ENGINES 12

Internal Combustion Engines - C.I and S.I Engines - Four Stroke and Two Stroke Engines- Gas Turbines - Boilers - Fire Tube Boiler & Water Tube Boilers, Boiler Accessories and Components. Steam turbines - Impulse Turbine and Reaction Turbine, Turbine Components - Refrigeration Cycle - Vapour Compression & Vapour Absorption System, Gas Refrigeration System - Environmental friendly Refrigerants - Air Conditioning.

UNIT III HEAT ENGINES 12

Internal Combustion Engines - C.I and S.I Engines - Four Stroke and Two Stroke Engines- Gas Turbines - Boilers - Fire Tube Boiler & Water Tube Boilers, Boiler Accessories and Components. Steam turbines - Impulse Turbine and Reaction Turbine, Turbine Components - Refrigeration Cycle - Vapour Compression & Vapour Absorption System, Gas Refrigeration System - Environmental friendly Refrigerants - Air Conditioning.

UNIT IV GASES AND VAPOUR MIXTURES 12

Ideal and Real gases - Vander waals equations - Reduced property - Compressibility chart - Properties of mixture of gases - Dalton's law and Gibbs - Internal energy, Enthalpy and specific heats of gas mixtures.

UNIT V HEAT TRANSFER 12

Laws of Governing - Modes of Heat Transfer-Concept of Heat resistance-Conduction-Plane wall, Cylinder system, Composite walss & Cylinders - Critical thickness - Fins - Simple Problems - Convection - Free and Forced - over flat plates and tubes - Heat exchangers Radiation - Black, grey body radiation - radiation Shield.

L+T = 45+15, TOTAL: 60 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the basic concepts of thermodynamics
CO2 : Apply the concepts of first and second law of thermodynamics
CO3 : Describe the construction and working of IC engine, boilers, turbine and refrigerators
CO4 : Estimate the properties of gases and vapor mixtures
CO5 : Understand the concepts of heat transfer

MF7401 CASTING AND WELDING TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVE

- To study various casting and welding methods including advanced techniques, with emphasis on basic principles, limitations and application areas.

UNIT I INTRODUCTION OF CASTING **9**

Patterns : Making - materials, types, allowances pattern making - Moulding: materials, equipment, sand preparation, testing and control - Cores and core making - Design considerations in casting, gating system - Melting furnaces - directional solidification in castings, Metallurgical aspects of Casting- Steps involved in casting.

UNIT II CASTING PROCESSES **9**

Casting processes: Steps, Advantages, limitations and applications of Sand castings, permanent mould casting - pressure die casting, centrifugal casting - precision casting: investment casting, shell Moulding - CO2 Moulding, continuous casting, squeeze casting, Fettling and finishing, casting defects and Inspection.

UNIT III INTRODUCTION TO WELDING **9**

Types of welding - Positions of welding-types of weld joints - Arc welding: power sources-Electrodes - flux - Gas welding - equipment - Welding symbols - Metallurgical aspects of welding

- weld thermal cycles - Heat affected zone and its characteristics - pre and post weld heat treatments. Welding defects : causes and remedies - Welding inspection.

UNIT IV WELDING PROCESSES **9**

Welding processes: Arc welding: SMAW, GTAW, GMAW, SAW, ESW - Resistance welding: spot, seam, projection, percussion, flash types - atomic hydrogen arc welding - thermit welding - oxy acetylene gas welding- Flame cutting: Oxyacetylene, arc cutting- Soldering, brazing and braze welding - Electron beam welding, laser beam welding, plasma arc welding and ultrasonic welding - explosive welding - Friction stir welding - Under water welding.

UNIT V AUTOMATION OF WELDING AND CASTING **9**

Layout of mechanized foundry - sand reclamation - Material handling in foundry - pollution control in Foundry - Recent trends in casting - Computer Aided design of Castings - Process. Automation in welding - Welding robots - Seam tracking vision and arc sensing - Overview of automation in various industries.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Acquire knowledge in casting
CO2 : Select suitable casting process for application requirement.
CO3 : Acquire knowledge in welding
CO4 : Select suitable welding process according to the requirements.
CO5 : Gain knowledge on automation in welding and casting

MF7402 METAL FORMING AND POWDER METALLURGY

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

At the end of this course the student should be able to

- Understand plastic deformations and classification of forming processes
- Differentiate bulk forming processes
- Differentiate sheet metal forming processes
- Differentiate conventional forming and special forming processes
- Understand various stages involved in the powder forming processes

UNIT I INTRODUCTION TO METAL FORMING 9

Mechanical behavior of materials - Elastic and plastic deformation - Classification of Forming Processes - Temperature in metal working: hot and cold working - Introduction to the theory of plastic deformation.

UNIT II THEORY AND PRACTICE OF BULK FORMING PROCESSES 9

Analysis of plastic deformation in forging, rolling, extrusion, rod/wire and tube drawing processes - Effect of friction, calculation of forces, work done, process parameters, equipments, defects and applications - Recent advances in forging, rolling, extrusion and drawing processes - Experimental techniques of evaluation of friction in metal forming - Economics of bulk forming processes

UNIT III SHEET METAL FORMING PROCESSES 9

Conventional sheet metal forming processes like shearing, bending and miscellaneous forming processes - High energy rate forming processes - Super plastic forming processes - Deep drawing process; Principles, process parameters, advantages, limitations and applications - Formability of sheet metals - Design considerations.

UNIT IV SPECIAL FORMING PROCESSES 9

Orbital forging - Isothermal forging - Hot and cold Isostatic pressing - High speed extrusion - High speed forming machines - Rubber pad forming - Water hammer forming - Fine blanking.

UNIT V POWDER METALLURGY 9

Overview of powder metallurgy techniques, advantages and their applications - Powder forging, rolling, extrusion and drawing - Secondary and finishing operations - Design considerations for powder metallurgy - Economics of powder metallurgy processes.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand different types of deformation and estimate the forces required for forming.

CO2 : Explain bulk forming techniques and identify where they are used in manufacturing.
CO3 : Describe various sheet metal forming methods and their practical applications.
CO4 : Differentiate between conventional and specialized forming processes.
CO5 : Apply knowledge of powder forming processes and recognize their industrial applications.

ML7451 ENGINEERING MATERIALS AND METALLURGY

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- Constructing the phase diagram and using of iron-iron carbide phase diagram for microstructure formation.
- Selecting and applying various heat treatment processes and its microstructure formation.
- Applying the different types of ferrous and non-ferrous alloys and their uses in engineering field.

- Applying the different polymer, ceramics and composites and their uses in engineering field.
- Applying the various testing procedures and failure mechanism in engineering field.

UNIT I CONSTITUTION OF ALLOYS AND PHASE DIAGRAMS 9

Constitution of alloys – Solid solutions, substitutional and interstitial – phase diagrams, Isomorphous, eutectic, eutectoid, peritectic, and peritectoid reactions, Iron – Iron carbide phase diagram. Classification of steel and cast Iron- microstructure, properties and application.

UNIT II HEAT TREATMENT 9

Definition – Full annealing, stress relief annealing, recrystallisation annealing and spheroidising – normalizing, hardening and tempering of steel. Isothermal transformation diagrams – cooling curves superimposed on I.T. diagram – Continuous Cooling Transformation (CCT) diagram – Austempering, Martempering – Hardenability, Jominy end quench test -case hardening, carburizing, nitriding, cyaniding, carbonitriding – Flame and Induction hardening – Vacuum and Plasma hardening – Thermo-mechanical treatments- elementary ideas on sintering

UNIT III FERROUS AND NON-FERROUS METALS 9

Effect of alloying additions on steel (Mn, Si, Cr, Mo, V, Ti & W) – stainless and tool steels – HSLA - Maraging steels – Grey, white, malleable, spheroidal and alloy cast irons, Copper and its alloys – Brass, Bronze and Cupronickel – Aluminium and its alloys; Al-Cu – precipitation strengthening treatment – Titanium alloys, Mg-alloys, Ni-based superalloys –Properties and Applications

UNIT IV NON-METALLIC MATERIALS 9

Polymers – types of polymer, commodity and engineering polymers – Properties and applications of PE, PP, PS, PVC, PMMA, PET, PC, PA, ABS,PAI, PPO, PPS, PEEK, PTFE, Thermo set polymers – Urea and Phenol formaldehydes - Engineering Ceramics – Properties and applications of Al2O3, SiC, Si3N4, PSZ and SIALON – Composites- Matrix and reinforcement Materials- applications of Composites - Nano composites.

UNIT V MECHANICAL PROPERTIES AND DEFORMATION MECHANISMS 9

Mechanisms of plastic deformation, slip and twinning – Types of fracture – Testing of materials under tension, compression and shear loads – Hardness tests (Brinell, Vickers and Rockwell), Micro and nano-hardness tests, Impact test - lzod and Charpy, Fatigue and Creep failure mechanisms.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Construct the phase diagram and interpret the various phases.
CO2 : Identify suitable heat treatment process to achieve the desired properties.
CO3 : Choose proper ferrous and non-ferrous alloys for an engineering application.
CO4 : Select appropriate polymer, ceramics and composites for an engineering application.
CO5 : Examine the mechanical properties of materials by adopting various testing procedures.

ME7412 DYNAMICS LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVE

- To give an understanding of some of the basic measurements carried out in manufacturing industries and the importance of calibrating measuring instruments.
- To understand the principles of kinematics and Dynamics involved in various mechanisms

DYNAMICS MEASUREMENTS

LIST OF EXPERIMENTS

1. a) Study of gear parameters.

   b) Experimental study of velocity ratios of simple, compound, epicyclic and differential gear trains.
2. a) Kinematics of Crank Rocker, Double crank, Double rocker, Slider Crank and Oscillating cylinder Mechanisms.

   b) Kinematics of single and double universal joints.
3. a) Determination of Mass moment of inertia of Fly wheel and Axle system.

   b) Determination of Mass Moment of Inertia of axisymmetric bodies using Turn table apparatus.

   c) Determination of Mass Moment of Inertia using bifilar suspension and compound pendulum.
4. Motorized gyroscope – Study of gyroscopic effect and couple.

5. Governor - Determination of range sensitivity and effort for Watts, Porter, Proell, and Hartnell Governors.
6. Cams – Cam profile drawing, Motion curves and study of jump phenomenon
7. a) Single degree of freedom Spring Mass System – Determination of natural Frequency and verification of Laws of springs – Damping coefficient determination.
   b) Multi degree freedom suspension system – Determination of influence coefficient.
8. a) Determination of torsional natural frequency of single and double rotor systems - Undamped and Damped Natural frequencies.
   b) Vibration Absorber – Tuned vibration absorber.
9. Vibration of Equivalent Spring mass system – undamped and damped vibration.
10. Whirling of shafts – Determination of critical speeds of shafts with concentrated loads.
11. a) Balancing of rotating masses. (b) Balancing of reciprocating masses.
12. a) Transverse vibration of Free-Free beam – with and without concentrated masses.
    b) Forced Vibration of Cantilever beam – Mode shapes and natural frequencies.
    c) Determination of transmissibility ratio using vibrating table.

TOTAL: 60 PERIODS

Course Outcomes

Upon the completion of all experiments given in the dynamics laboratory, the students shall be able to

CO1 : Understand the aim and objective of experiments
CO2 : Apply the specified procedure to conduct the experiments
CO3 : Observe, measure, tabulate and calculate the key parameters of experiments
CO4 : Analyse and Evaluate the results of experiments
CO5 : Draw conclusion and inference after the evaluation of experiments

ME7413 MANUFACTURING TECHNOLOGY LABORATORY

L	T	P	C
0	0	4	2

COURSE OBJECTIVES:

The main learning objective of this course is to provide hands on training to the students in:

1. Selecting appropriate tools, equipments and machines to complete a given job.
2. Performing various machining process such as broaching, drawing, turning, shaping, drilling, milling.
3. Fabricating gears using gear making machines.
4. Analyzing the defects in the cast and machined components.

LIST OF EXPERIMENTS

1. Taper Turning and Eccentric Turning using lathe
2. External and Internal Thread cutting using lathe
3. Knurling
4. Shaping – Square and Hexagonal Heads
5. Drilling and Reaming
6. Contour milling - vertical milling machine
7. Spur and helical gear cutting using milling machine
8. Gear generation using gear hobber
9. Gear generation using gear shaper
10. Grinding – Cylindrical, Surface and Centerless grinding
11. Tool angle grinding with tool and Cutter Grinder
12. Spline Broaching
13. Measurement of cutting forces in Milling /Turning Process
14. Preparation of Green sand moulds
15. Manufacturing of simple sheet metal components using shearing and bending
16. Friction Stir Welding of Aluminium plates

TOTAL: 60 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Select appropriate tools, equipments and machines to complete a given job.
CO2 : Perform various turning process using Lathe.
CO3 : Perform various machining process such as broaching, drawing, shaping, drilling, milling.
CO4 : Fabricate gears using gear making machines.
CO5 : Analyse the defects in the cast and machined components.

ME7551 **COMPUTER AIDED DESIGN** **L T P C**
3 0 0 3

COURSE OBJECTIVES:

The main learning objective of this course is to prepare the students for:

1. Applying the fundamental concepts of computer graphics and its tools in a generic framework.

2. Creating and manipulating geometric models using curves, surfaces and solids.
3. Applying concept of CAD systems for 3D modeling and visual realism.
4. Creating and adding geometric tolerances in assembly modeling.
5. Applying CAD standard practices in engineering design.

UNIT I FUNDAMENTALS OF COMPUTER GRAPHICS 9

Product cycle- Design process - Computer Aided Design – Computer graphics – co-ordinate systems- 2D and 3D transformations- homogeneous coordinates - graphic primitives (point, line, circle drawing algorithms) - Clipping- viewing transformation.

UNIT II GEOMETRIC MODELING 9

Representation of curves - Hermite cubic spline curve, Bezier curve, B-spline curves, Surface Modeling – Surface Entities, Representation of Surface, Bezier Surface, B-Spline Surface and Coons Surface. Solid Modeling - Solid Entities, Solid Representation, Boundary Representation (B-Rep), Sweeps Representation, Constructive Solid Geometry (CSG).

UNIT III VISUAL REALISM 9

Need for hidden surface removal, The Depth - Buffer Algorithm, Properties that help in reducing efforts, Scan Line coherence algorithm, Span - Coherence algorithm, Area-Coherence Algorithms, Warnock's Algorithm, Priority Algorithms– shading – colouring – computer animation.

UNIT IV PART ASSEMBLY 9

Mass properties - Assembly modeling – Inference of position and orientation –Geometric Dimensioning and Tolerancing – Functional importance of various types of fits, Geometrical dimensioning and Tolerancing, Tolerance stacking – types and remedies.

UNIT V CAD STANDARDS 9

Standards for computer graphics- Graphical Kernel System (GKS) - Open Graphics Library (OpenGL) - Data exchange standards - IGES, STEP, ACIS and DXF - communication standards.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Employ the fundamental concepts of computer graphics and its tools in a generic framework.
CO2 : Create and manipulate the geometric models using curves, surfaces and solids
CO3 : Develop 3D model and visual realism in CAD systems.
CO4 : Apply geometrical dimensioning and tolerancing in assembly modelling.
CO5 : Adapt the standard CAD practices in engineering design.

ME7553	HYDRAULICS AND PNEUMATICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

The main learning objective of this course is to prepare the students for:

1. Applying the working principles of fluid power systems and hydraulic pumps.
2. Applying the working principles of hydraulic actuators and control components.
3. Designing and develop hydraulic circuits and systems.
4. Applying the working principles of pneumatic power system and its components.
5. Solving problems and troubles in fluid power systems.

UNIT I FLUID POWER PRINICIPLES AND HYDRAULIC PUMPS 9

Introduction to Fluid power – Advantages and Applications – Fluid power systems – Types of fluids- Properties of fluids and selection – Basics of Hydraulics – Pascal’s Law – Principles of flow - Friction loss – Work, Power and Torque Problems, Sources of Hydraulic power : Pumping Theory– Pump Classification – Construction, Working, Design, Advantages, Disadvantages, Performance, Selection criteria of Linear and Rotary – Fixed and Variable displacement pumps – Problems.

UNIT II HYDRAULIC ACTUATORS AND CONTROL COMPONENTS 9

Hydraulic Actuators: Cylinders – Types and construction, Application, Hydraulic cushioning – Hydraulic motors - Control Components : Direction Control, Flow control and pressure control valves – Types, Construction and Operation – Servo and Proportional valves – Applications – Accessories : Reservoirs, Pressure Switches – Applications – Fluid Power ANSI Symbols – Problems.

UNIT III HYDRAULIC CIRCUITS AND SYSTEMS 9

Accumulators, Intensifiers, Industrial hydraulic circuits – Regenerative, Pump Unloading, Double- Pump, Pressure Intensifier, Air-over oil, Sequence, Reciprocation, Synchronization, Fail-Safe, Speed Control, Hydrostatic transmission, Electro hydraulic circuits, Mechanical hydraulic servo systems.

UNIT IV PNEUMATIC AND ELECTRO PNEUMATIC SYSTEMS 9

Properties of air – Perfect Gas Laws – Compressor – Filters, Regulator, Lubricator, Muffler, Air control Valves, Quick Exhaust Valves, Pneumatic actuators, Design of Pneumatic circuit – Cascade method – Electro Pneumatic System – Elements – Ladder diagram – Problems,

Introduction to fluidics and pneumatic logic circuits.

UNIT V TROUBLE SHOOTING AND APPLICATIONS 9

Installation, Selection, Maintenance, Trouble Shooting and Remedies in Hydraulic and Pneumatic systems, Design of hydraulic circuits for Drilling, Planning, Shaping, Surface grinding, Press and Forklift applications. Design of Pneumatic circuits for Pick and Place applications and tool handling in CNC Machine tools – Low cost Automation – Hydraulic and Pneumatic power packs.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Make use of the principles of fluid mechanics and thermodynamics to develop fluid power systems.
CO2 : Discuss the working principles of hydraulic actuators and control components.
CO3 : Design and develop hydraulic circuits and systems.
CO4 : Develop solutions for industrial automation with pneumatic circuits.
CO5 : Troubleshoot and provide solutions for the problems in Hydraulic and Pneumatic systems.

ME7554	INDUSTRIAL MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE

- To develop modern concepts of Industrial Management

UNIT I INTRODUCTION **9**

Technology Management - Definition – Functions – Evolution of Modern Management – Scientific management Development of management Thought. Approaches to the study of management, Forms of organization – Individual Ownership- partnership – Joint Stock companies– co-operative Enterprises- Public sector Undertakings, Corporate frame Work – Share Holders- Board of Directors- Committees – Chief Executive – Line and functional Managers, Constraints – Environmental – Financial – Legal- Trade Union

UNIT II FUNCTIONS OF MANAGEMENT **9**

Planning – nature and purpose – objectives – strategies – policies and planning premises – Decision making – Organizing – Nature and process – premises – Departmentalization – line and staff – Decentralization – organizational culture, Staffing – selection and training – placement – performance appraisal – career strategy – organizational development. Leading managing human factor – Leadership – communication, Controlling – process of Controlling – Controlling Techniques – productivity and inventory management systems-Tools of Techniques– Prevention control, industrial safety

UNIT III ORGANIZATIONAL BEHAVIOUR **9**

Definition – Organization – Managerial Role and functions – organizational approaches, individual behavior – causes – Environmental Effect – Behavior and performance, perception – organizational Implications. Personality – Contributing factors – Dimension – Need Theories – process Theories – Job satisfaction, Learning and Behavior- Learning Curves, work design and approaches

UNIT IV GROUP DYNAMICS **9**

Group Behavior – Groups – Contributing factors – Group Norms, Communication – Process – Barriers to communication – Effective Communication, leadership- Formal and informal characteristics- Managerial Grid – Leadership Styles – Group Decision making – Leadership Role in Group Decision, Group Conflicts – Types – Causes – Conflict Resolution – Inter group relations and conflict, Organizational centralization and decentralization – Formal and informal – organizational structures – organizational change and development – Change process – Resistance to change – culture and ethics

UNIT V MODERN CONCEPTS **9**

Management by objectives (MBO) – Strategic Management – SWOT analysis –Evolving development strategies, information technology in management – Decision support system – Management Games – Business Process Re-engineering (BPR) – supply chain management (SCM) –Global Perspective – Principles and Steps – Advantages and Disadvantages

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Explain basic concepts of management; forms of business organization and trade unions function in professional organizations.
CO2 : Identify the various functions of management.
CO3 : Analyse the concepts of organizational behaviour.
CO4 : Adapt group dynamics in an organization.
CO5 : Apply modern concepts and marketing in management.

MF7501 METROLOGY AND COMPUTER AIDED INSPECTION L T P C
3 0 0 3

OBJECTIVE

- To teach the students basic concepts in various methods of engineering measurement techniques and applications, understand the importance of measurement and inspection in manufacturing industries. Expose the students to various modern metrological instruments, the procedure used to operate these instruments and applications of computers in metrology.

UNIT I BASIC CONCEPTS OF MEASUREMENTS 9

Important terminologies - Elements of Measurement, Need for measurement - Factors influencing measurement - Precision and Accuracy - Methods of measurement - Errors in Measurements - Causes - Types-Handling of measuring instruments - Dos and Don'ts - Maintenance of Instruments - Clean room - Clean room procedures.

UNIT II LINEAR AND ANGULAR MEASUREMENTS 9

Important terminologies - Elements of Measurement, Need for measurement - Factors influencing measurement - Precision and Accuracy - Methods of measurement - Errors in

Measurements - Causes - Types-Handling of measuring instruments - Dos and Don'ts - Maintenance of Instruments - Clean room - Clean room procedures.

UNIT III FORM MEASUREMENTS 9

Measurement of various elements of Screw threads and gears - Radius measurement - Surface finish measurement - Straightness, Flatness and roundness measurements - Principles - Application – Computerized form measuring equipments.

UNIT IV LASER METROLOGY 9

Precision instrument based on Laser - Use of Lasers - Principle –Interferometers, Interference microscope - Laser Interferometer - Application in Linear and Angular measurements - Testing of machine tools using Laser Interferometer

UNIT V COMPUTER AIDED INSPECTION AND ADVANCES IN METROLOGY 9

Co-ordinate Measuring Machines - Constructional features - Types - Applications of CMM - CNC CMM applications - Fundamentals of Computer Aided Inspection - Machine Vision and applications in Metrology - Introduction to Nanometrology

TOTAL: 45 PERIODS

Course Outcomes

CO1 : Gain understanding with various basic principles of measurement and follow standard measurement procedures
CO2 : Understand the principle, construction and working of measuring devices and use them
CO3 : Understand the challenges of measurement in industries and develop innovative measurement designs
CO4 : Learn to apply advanced measurement techniques in industries and organizations
CO5 : Analyse complex scenes quickly using computer aided inspection to make decisions

ME7561 COMPUTER AIDED MACHINE DRAWING

L	T	P	C
0	0	4	2

COURSE OBJECTIVES:

The main learning objective of this course is to provide hands on training to the students in:

1. Applying standard drawing practices using fits and tolerances.
2. Modeling 2D views of machine components
3. Modeling 3D views of machine components
4. Preparing assembly drawings both manually and using standard CAD packages.
5. Gaining practical experience in handling 2D drafting and 3D modeling software systems.

UNIT I DRAWING STANDARDS & FITS AND TOLERANCES 12

Code of practice for Engineering Drawing, BIS specifications – Welding symbols, riveted joints, keys, fasteners – Reference to hand book for the selection of standard components like bolts, nuts, screws, keys etc. - Limits, Fits – Tolerancing of individual dimensions – Specification of Fits – Preparation of production drawings and reading of part and assembly drawings, basic principles of geometric dimensioning & tolerancing.

UNIT II INTRODUCTION TO 2D DRAFTING 16

- Drawing, Editing, Dimensioning, Layering, Hatching, Block, Array, Detailing, Detailed drawing.
- Bearings - Bush bearing, Plummer block.
- Valves – Safety and non-return valves.

UNIT III 3D GEOMETRIC MODELING AND ASSEMBLY 32

Sketcher - Datum planes – Protrusion – Holes - Part modeling – Extrusion – Revolve – Sweep –Loft – Blend – Fillet - Pattern – Chamfer - Round - Mirror – Section - Assembly

- Couplings – Flange, Universal, Oldham’s, Muff, Gear couplings
- Joints – Knuckle, Gib & cotter, strap, sleeve & cotter joints
- Engine parts — Piston, connecting rod, cross-head (vertical and horizontal), stuffing box,multi-plate clutch
- Miscellaneous machine components — Screw jack, machine vice, tail stock, chuck, vaneand gear pumps

TOTAL: 60 PERIODS

Total:20% of classes for theory classes and 80% of classes for practice

Note: 25% of assembly drawings must be done manually and remaining 75% of assembly drawings must be done by using any CAD software. The above tasks can be performed manually and using standard commercial 2D / 3D CAD software.

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Practice drawing standards using fits and tolerances.
CO2 : Develop and visualize 2D views of machine components
CO3 : Develop and visualize 3D Views of machine components
CO4 : Construct part drawings, sectional views and assembly drawings as per standards
CO5 : Create standard drawing for modeled parts or assemblies using modeling software

MF7511	METROLOGY AND METALLURGY LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES :

- To make the students understand the fundamental principles of measuring techniques by practicing exercises on various measuring instruments.
- Students should be able to perform metallographic study of the given samples and heat treatment study of steel.

LIST OF EXPERIMENTS - METROLOGY LAB :

1. Linear and Angular measurements using Autocollimator.
2. Measurement of tooth thickness using gear tooth Vernier caliper.
3. Calibration of optical comparator and measurement of dimensions.
4. Calibration of electrical comparator and checking of dimensions.
5. Exercises in Microhite.

6. Measurement of Taper Angle using sine bar.
7. Measurement of components using profile projectors.
8. Study Exercises in Video measuring system, Rolling gear tester, Surface Roughness Tester and CMMs.

LIST OF EXPERIMENTS - METALLURGY LAB:

1. Micro structural examination of steel.
2. Micro structural examination of grey cast iron.
3. Micro structural examination of nodular cast iron.
4. Micro structural examination of non-ferrous material (Aluminium, Copper).
5. Heat treatment of steel (hardening, tempering, normalizing).

TOTAL: 60 PERIODS

Course Outcomes

CO1 : Perform measurement tasks for linear and angular measurement of components.
CO2 : Identify the right instrument and method of measurement for a particular application.
CO3 : Adapt appropriate procedure for measuring various components based on the specific situation or case
CO4 : Prepare specimen for microscopic examination and Identify the microstructures of ferrous and nonferrous metals.
CO5 : Realize the effect of heat treatment on the properties of materials.

ME7603 DESIGN OF JIGS, FIXTURES AND PRESS TOOLS

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

The main learning objective of this course is to prepare the students for:

1. Applying the principles of locating and clamping in Jigs and fixtures and various components related to Press tools.
2. Designing various types of Jigs for given components and draw multiple views of the same with dimensions and parts List.
3. Designing various types of Fixtures for given components and draw multiple views of the same with dimensions and parts List.
4. Designing various parts of cutting dies and draw the standard dimensioned views.

5. Designing various parts of forming dies and draw the standard dimensioned views.

UNIT I PRINCIPLES OF JIGS, FIXTURES AND PRESS WORKING 9

Objectives and importance of tool design—work holding devices- Basic elements of jigs and fixtures- location – clamping-indexing-operational chart-Fits and Tolerances

Tools for press working- Press Working Terminologies –cutting and non cutting operations – Types of presses – press accessories – Computation of press capacity – Strip layout – Material Utilization – Shearing action – Clearances – Press Work Materials – Center of pressure– knockouts – direct and indirect – pressure pads – Ejectors- Die Block – Punch holder, Die set, guide plates – Stops – Strippers – Pilots – Selection of Standard parts –Recent trends in tooling- recent trends in tool design- computer Aids for sheet metal forming Analysis – basic introduction - tooling for numerically controlled machines- setup reduction for work holding – Single minute exchange of dies-Poka Yoke.

UNIT II JIGS 9

Design and development of jigs for given component - Types of Jigs – Post, Turnover, Channel, latch, box, pot, angular post jigs – Indexing jigs.

UNIT III FIXTURES 9

Design and development of fixtures for given component- General principles of milling, Lathe, boring, broaching and grinding fixtures – Assembly, Inspection and Welding fixtures – Modular fixturing systems- Quick change fixtures.

UNIT IV DESIGN OF CUTTING DIES 9

Complete design and preparation of standard views of simple blanking, piercing, compound and progressive dies -fine Blanking dies.

UNIT V DESIGN OF BENDING, FORMING, DRAWING AND MISCELLANEOUS DIES 9

Difference between bending forming and drawing – Blank development for above operations – Types of Bending dies – Press capacity – Spring back– Variables affecting Metal flow in drawing operations – draw die inserts – draw beads- ironing – Design and development of bending, forming, drawing, reverse redrawing and combination dies – Blank development for axisymmetric, rectangular and elliptic parts – Single and double action dies.

TOTAL: 45 PERIODS

Note: (Use of P S G Design Data Book is permitted in the University examination)

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Apply the principles of locating and clamping in Jigs and fixtures and various components related to Press tools.

CO2 : Design various types of Jigs for given components and draw multiple views of the same with dimensions and parts List.

CO3 : Design various types of Fixtures for given components and draw multiple views of the same with dimensions and parts List.

CO4 : Design various parts of cutting dies and draw the standard dimensioned views.

CO5 : Design various parts of forming dies and draw the standard dimensioned views.

MF7601 CNC TECHNOLOGY **L T P C**
3 0 0 3

OBJECTIVE

- To understand the evolution and principle of CNC machine tools
- To describe constructional features of CNC machine tools, drives and positional transducers used in CNC machine tools
- To generate CNC programs for popular CNC controllers
- To describe tooling and work holding devices for CNC machine tools

UNIT I INTRODUCTION TO CNC MACHINE TOOLS **9**

Evolution of CNC Technology - principles - features - advantages - applications - CNC and DNC concept - CNC controllers - characteristics - interpolators - types of CNC Machines - turning centre - machining centre - grinding machine - vertical turret lathe - turn-mill centre - EDM

UNIT II STRUCTURE OF CNC MACHINE TOOL **9**

CNC Machine building - structural details - configuration and design - guide ways - Friction - Anti friction and other types of guide ways - elements used to convert the rotary motion to a linear motion - Screw and nut - recirculating ball screw - spindle assembly - torque transmission elements - gears - timing belts - flexible couplings - Bearings.

UNIT III DRIVES AND CONTROLS **9**

Spindle drives - feed drives - stepper motor - servo motor - linear motor - open loop and closed loop control - Axis measuring system - synchro - synchro resolver- gratings- moiré fringe gratings- encoders - inductosyn - laser interferometer

UNIT IV CNC PROGRAMMING **9**

Coordinate system - structure of a CNC part program - G & M Codes - tool length compensation - cutter radius and tool nose radius compensation - do loops - subroutines - canned cycles- mirror image - parametric programming - machining cycles- programming for machining centre and turning centre for well known controllers such as Fanuc - Sinumerik etc.- generation of CNC codes from CAM packages.

UNIT V TOOLING AND WORK HOLDING DEVICES **9**

Cutting tool materials for CNC machine tools- hard metal insert tooling- inserts and tool holder classification - qualified - semi qualified and preset tooling - ATC - APC - tooling for machining and turning centre - silent tool - work holding devices for rotating and fixed work parts- economics of CNC - maintenance of CNC machines.

TOTAL: 45 PERIODS

Course Outcomes

At the end of the course, the students are expected to

CO1 : To understand the evolution and principle of CNC machine tools
CO2 : Acquire knowledge on constructional features of CNC machine tools
CO3 : Identify drives and axis measuring system used in CNC machine tools
CO4 : Demonstrate competency in manual part program and generation of CNC part program using CAM packages
CO5 : Examine various tooling and work holding devices used in CNC machine tools

MF7602	OPERATIONS RESEARCH	L	T	P	C
		3	0	0	3

OBJECTIVE

- To provide knowledge and training using optimization techniques under limited resources for the engineering and business problems.

UNIT I LINEAR MODELS **9**

The phase of an operation research study - Linear programming - Graphical method - Simplex algorithm - Duality formulation - Sensitivity analysis: - changes in - Objective function, RHS of Constraints and variables.

UNIT II TRANSPORTATION MODELS AND NETWORK MODELS **9**

Transportation Assignment Models - Traveling Salesman problem - Networks models - Shortest route - Minimal spanning tree - Maximum flow models - Project network - CPM and PERT networks - Critical path scheduling.

UNIT III INVENTORY AND REPLACEMENT MODELS **9**

Inventory models - Economic order quantity models - Quantity discount models - Stochastic inventory models - Multi product models - Inventory control models - replacement models - service life - Economics.

UNIT IV QUEUEING MODELS **9**

Queueing models - Queueing systems and structures - Notation parameter - Single server and multi server models - Poisson input - Exponential service - Constant rate service - Infinite population - Simulation - Monte Carlo Technique

UNIT V DECISION MODELS **9**

Decision models - Game theory - Two person zero sum games - Graphical solution - Algebraic solution - Linear Programming solution - Single / Multi variable search technique - Dynamic Programming - Simple Problems.

TOTAL: 45 PERIODS

Course Outcomes

At the end of the course, the students are expected to

CO1 : Appreciate the importance and value of Operations Research and linear programming in addressing real-world challenges in industry and organizations.

CO2 : Understand complex transportation problems derive solutions and Analyse them in practical scenarios.

CO3 : Identify and different type of resource optimization problems and derive solutions to them

CO4 : Acquire proficiency in constructing project networks for quantitative project analysis.

CO5 : Recognize the applicability of computer simulation and dynamic programming in addressing real-world issues.

MF7651 NON-TRADITIONAL MACHINING PROCESSES

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

At the end of this course the students are expected to

- Understand the working principles of various non-traditional machining processes, their applications, advantages and limitations.
- Enhance their ability to compare different non-traditional processes, recognise the Nano finishing processes and latest trends in non-traditional machining processes.

UNIT I INTRODUCTION AND MECHANICAL ENERGY BASED PROCESSES **9**

Introduction to non-traditional machining processes, need for non-traditional machining, classification of non-traditional machining processes, their applications, advantages, limitations. Abrasive jet machining, abrasive water jet machining, ultrasonic machining their working principles, equipments, effect of process parameters, applications, advantages and limitations.

UNIT II CHEMICAL AND ELECTRO CHEMICAL ENERGY BASED PROCESSES **9**

Chemical machining, electro-chemical machining, electro-chemical honing, electro-chemical grinding, electro-chemical deburring their working principles, equipments, effect of process parameters, applications, advantages and limitations.

UNIT III THERMO-ELECTRIC ENERGY BASED PROCESSES 9

Electric discharge machining, wire electric discharge machining, laser beam machining, plasma arc machining, electron beam machining, Ion beam machining their working principles, equipments, effect of process parameters, applications, advantages and limitations.

UNIT IV ADVANCED NANO FINISHING PROCESSES 9

Abrasive flow machining, chemo-mechanical polishing, magnetic abrasive finishing, magneto rheological finishing, magneto rheological abrasive flow finishing their working principles, equipments, effect of process parameters, applications, advantages and limitations.

UNIT V RECENT TRENDS IN NON-TRADITIONAL MACHINING PROCESSES 9

Recent developments in non-traditional machining processes, their working principles, equipments, effect of process parameters, applications, advantages and limitations. Comparison of non-traditional machining processes.

TOTAL: 45 PERIODS

Course Outcomes

At the end of the course, the students are expected to

CO1 : Classify various energy based machining processes by considering the limitations of conventional machining processes and develop mechanical energy-based processes.

CO2 : Understand the chemical and electrochemical energy based processes and apply them based on their advantages and limitations.

CO3 : Analyse and evaluate various thermo-electric energy based processes so that they can be suitably applied for machining advanced materials.

CO4 : Understand the various advanced Nano-finishing processes and apply them based on their pros and cons.

CO5 : Compare and select suitable non-traditional processes based on their machining characteristics and aware the recent trends in non-traditional machining processes.

MF7611	CAM LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVE

- To understand the concepts of CNC machine tools types,cutting tools and metal cutting process.
- Generate part programs using CNC programming and simulation s/w for CNC Lathe, CNC Milling Machine and CNC Wire EDM.
- To get hands on experience by machining the parts on actual machines.
- To understand the configuration of 4 & 5 axis Robot, comprehend Robot programming methods using robot language.
- Create work cell configuration and verify by simulation.

LIST OF EXPERIMENTS

1. Study of different CNC control systems and CNC codes.
2. Programming and simulation for turning, taper turning, circular interpolation, thread cutting, facing and parting operations.
3. Programming and simulation using Canned cycles for CNC Lathe.
4. Programming and simulation for machining of internal surfaces in CNC Lathe.
5. Programming and simulation for 3D profile milling, drilling, rigid tapping, boring operation.
6. Programming and simulation for circular and rectangular pocket milling.
7. Programming using canned cycles for CNC Milling machine.
8. CNC code generation using machine simulation / CAM software packages - CNC Lathe.
9. CNC code generation using simulation / CAM software packages - CNC Milling machine / Machining centre.
10. Programming for CNC Wire cut EDM.
11. Dimensional and geometric measurement of machined features using VMS, Surface Roughness and CMM.
12. Robot programming for Material handling applications.
13. Understanding assembly, polishing, palletizing for different types of robots using software.
14. Design workcell for machine tending, welding, inspection using single & multiple robots using software.

TOTAL: 60 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the aim and objective of CNC programming and simulation experiments.

CO2 : Generate dimensional and geometrical specifications of the given component

CO3 : Demonstrate generation of part programs using CAM packages for milling and turning Machines

CO4 : Demonstrate robot programming and recognize the concept of designing work cells for various manufacturing operations using software.

CO5 : Draw conclusions based on the evaluation of CNC programming and simulation outcomes.

MF7612 CREATIVE AND INNOVATIVE PROJECT

L	T	P	C
0	0	4	2

The goal of this course is to help students to identify innovative projects that promotes and inhibit creativity to explore the variables that affect creativity and innovation. By the end of the period, students should be familiar with current thinking in their field, and able to apply the concepts to relevant research problems or practical applications.

The goal of this course is to drive them to learn concepts, models, frameworks, and tools that engineering graduates need in a world where creativity and innovation is fast becoming a pre-condition for competitive advantage. Each student will choose a nagging workplace problem or

socially relevant problems that have been difficult for them to solve. At the end of the semester, each or group of students have to submit a report for evaluation.

TOTAL: 60 PERIODS

Course Outcomes

Upon successful completion of this course, the students will be able to:

CO1 : Apply theoretical knowledge to Analyse real-world problems and identify opportunities for innovation.

CO2 : Demonstrate proficiency in utilizing engineering tools and techniques to develop creative solutions.

CO3 : Analyse the effectiveness and feasibility of various design options through quantitative and qualitative evaluation methods.

CO4 : Design and develop novel engineering solutions that address identified challenges or opportunities.

CO5 : Effectively communicate their innovative engineering solutions, both orally and in written form, demonstrating clarity, coherence, and professionalism in their presentations and reports.

ME7354 MECHATRONICS

L	T	P	C
3	0	0	3

OBJECTIVE

The main learning objective of this course is to prepare the students for:

- Selecting sensors to develop mechatronics systems.
- Explaining the architecture and timing diagram of microprocessor, and also interpret and develop programs.
- Designing appropriate interfacing circuits to connect I/O devices with microprocessor.
- Applying PLC as a controller in mechatronics system.
- Designing and develop the apt mechatronics system for an application.

UNIT I INTRODUCTION **9**

Introduction to Mechatronics – Systems – Need for Mechatronics – Emerging areas of Mechatronics – Classification of Mechatronics. Sensors and Transducers: Static and Dynamic Characteristics of Sensor, Potentiometers – LVDT – Capacitance Sensors – Strain Gauges – Eddy Current Sensor – Hall Effect Sensor –Temperature Sensors – Light Sensors.

UNIT II 8085 MICROPROCESSOR 9

Introduction – Pin Configuration - Architecture of 8085 – Addressing Modes – Instruction set, Timing diagram of 8085.

UNIT III PROGRAMMABLE PERIPHERAL INTERFACE 9

Introduction – Architecture of 8255, Keyboard Interfacing, LED display – Interfacing, ADC and DAC Interface, Temperature Control – Stepper Motor Control – Traffic Control Interface.

UNIT IV PROGRAMMABLE LOGIC CONTROLLER 9

Introduction – Architecture – Input / Output Processing – Programming with Timers, Counters and Internal relays – Data Handling – Selection of PLC.

UNIT V ACTUATORS AND MECHATRONICS SYSTEM DESIGN 9

Types of Stepper and Servo motors – Construction – Working Principle – Characteristics, Stages of Mechatronics Design Process – Comparison of Traditional and Mechatronics Design Concepts with Examples – Case studies of Mechatronics Systems – Pick and Place Robot – Engine Management system – Automatic Car Park Barrier.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to

CO1 : Identify suitable sensors to develop mechatronics systems.
CO2 : Explain the architecture and timing diagram of microprocessor, and also interpret and develop programs.
CO3 : Design appropriate interfacing circuits to connect I/O devices with microprocessor.
CO4 : Apply PLC as a controller in mechatronics system.
CO5 : Design and develop an appropriate mechatronics system for the given application

ME7751 FINITE ELEMENT ANALYSIS L T P C
3 0 0 3

OBJECTIVES

- To introduce the concepts of Mathematical Modeling and numerical solution of engineering problems.
- To appreciate the use of Finite Element Method to a range of engineering problems.

UNIT I INTRODUCTION 9

Historical Background – Mathematical Modeling of field problems in Engineering –Governing Equations – Discrete and continuous models – Boundary, Initial and Eigen Value problems– Weighted Residual Methods – Variational Formulation of Boundary Value Problems – Ritz Technique – Basic concepts of the Finite Element Method.

UNIT II ONE-DIMENSIONAL PROBLEMS 9

One Dimensional Second Order Equations – Discretization – Element types- Linear and Higher order Elements – Derivation of Shape functions and Stiffness matrices and force vectors- Assembly of Matrices - Solution of problems from solid mechanics including thermal stresses- heat transfer. Natural frequencies of longitudinal vibration and mode shapes. Fourth Order Beam Equation –Transverse deflections and Transverse Natural frequencies of beams.

UNIT III TWO DIMENSIONAL SCALAR VARIABLE PROBLEMS 9

Second Order 2D Equations involving Scalar Variable Functions – Variational formulation –Finite Element formulation – Triangular elements and Quadrilateral elements- Shape functions and element matrices and vectors. Application to Field Problems - Thermal problems – Torsion of Non circular shafts.

UNIT IV TWO DIMENSIONAL VECTOR VARIABLE PROBLEMS 9

Equations of elasticity – Plane stress, plane strain and axisymmetric problems – Constitutive matrices and Strain displacement matrices – Stiffness matrix – Stress calculations - Plate and shell elements.

UNIT V ISOPARAMETRIC FORMULATION AND ADVANCED TOPICS 9

Natural co-ordinate systems – Isoparametric elements – Shape functions for isoparametric elements – One and two dimensions – Serendipity elements – Numerical integration - Matrix solution techniques – Solutions Techniques to Dynamic problems – Introduction to Analysis Software- Introduction to Non Linearity.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Develop mathematical models for Boundary Value Problems and their numerical solution

CO2 : Formulate the Finite Element methodology to solve the one dimensional problem(s).
CO3 : Estimate field variables for two dimensional scalar variable problems
CO4 : Determine field variables for two-dimensional vector variable problems
CO5 : Apply the Isoparametric transformation and the use of numerical integration to engineering problems.

MF7701 COMPUTER INTEGRATED PRODUCTION MANAGEMENT SYSTEM **L T P C**
3 0 0 3

OBJECTIVE

- The course provides basic concepts of production planning and control, its bottlenecks, material requirement planning, shop floor control and different approaches to computer aided process planning in manufacturing sector.

UNIT I MANUFACTURING PLANNING AND CONTROL 9

Basic concepts - Types of production System - Functions of production planning and control – problems with Production Planning and Control – Computer Integrated Production Management System - Evolution of the MPC system-Demand management in MPC system and the MPC Environment: Make-to-stock, Assembly - to - order, Make - to –order, Engineer- to-order.

UNIT II FORECASTING 9

Forecasting system-Forecasting methods – Single and Double moving average methods – Single and Double exponential smoothing methods – Simple regression method of forecasting - Forecasting Errors.

UNIT III MATERIAL REQUIREMENT PLANNING 9

Basic MRP Concepts – Inputs to the MRP System – Master production Schedule – Bill of Materials, Inventory Record File – MRP Logic – Gross requirements, net requirements, lot sizing – Capacity Requirement Planning (CRP)-Distribution Resource Planning (DRP) -Manufacturing Resource Planning (MRP II).

UNIT IV COMPUTER AIDED PROCESS PLANNING 9

Need for process planning – Functions of process planning – Approaches to CAPP-Variant process planning – part family search – Generative method of CAPP – Forward and Backward planning – input format – part description methods – CAD Models – Decision Logic – Artificial Intelligence – Knowledge Representation – Databases and Algorithms – Expert Process Planning - Automatic Process Planning-Future trends-Case Studies.

UNIT V SHOP FLOOR CONTROL 9

Functions of shop floor control – Order Release - Operations scheduling – Job sequencing and Priority rules - order progress – Automatic Identification System - Factory Data Collection system.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the evolution of manufacturing planning and control systems and create strategies for effective demand management in diverse production environments.

CO2 : Analyse forecasting errors and apply various forecasting methods to design accurate demand prediction systems, integrating single and double moving averages with regression techniques.

CO3 : Evaluate material requirement planning concepts and design efficient master production schedules, considering gross and net requirements, lot sizing, and capacity planning.

CO4 : Apply computer-aided process planning functions to analyse different approaches and create automated manufacturing processes, integrating CAD models and artificial intelligence.

CO5 : Understand shop floor control functions and design effective order release systems, prioritizing operations scheduling and job sequencing using automatic identification and data collection.

ME7761 MECHATRONICS LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To develop codes for the microprocessor, microcontroller and PLC.
- To gain knowledge about the various types of sensors and signal conditioning units.
- To interface the I/O devices with microprocessor, microcontroller and PLC.
- To understand the method of actuating and controlling the speed of electrical and mechanical drives.
- To understand image processing techniques and DAQ system.

LIST OF EXPERIMENTS:

1. Experimental study of basic Signal Conditioning Circuits.
2. Measurement of Displacement, Force and Temperature using Transducers.
3. Experiments on application of LDR, Optocoupler, Ultrasonic and Infrared sensors.
4. Modelling and Analysis of basic Hydraulic, Pneumatic and Electro-Pneumatic Circuits using Simulation Software.
5. Actuation of Hydraulic, Pneumatic and Electro-Pneumatic circuits.
6. Application of PLC with Timers and Counters.
7. Solving basic Arithmetic Problems using 8085 Microprocessor and 8051 Microcontroller.
8. Automatic Temperature Control System.
9. Speed and Direction Control of DC drives by Microcontroller.
10. Speed Control of AC drives by Microcontroller.
11. Stepper Motor Actuation and Control.
12. Servo Motor Actuation and Control.
13. Actuation of Double-Acting Cylinder by Microcontroller and PLC.
14. Application of Image Processing System.
15. Data Acquisition System - Measurement and Analysis of Displacement, Force and Temperature.
16. Modelling and Analysis of Robot using Simulation Software.
17. Control of Robotic Actuation by Microcontroller.

TOTAL: 60 PERIODS

Course Outcomes

Upon the completion of all experiments given in the Mechatronics laboratory, the students shall be able to

CO1 : Understand the aim and objective of experiments
CO2 : Apply the specified procedure to conduct the experiments
CO3 : Observe, measure, tabulate and calculate the key parameters of experiments
CO4 : Analyse and Evaluate the results of experiments
CO5 : Draw conclusion and inference after the evaluation of experiments

MF7711 **INDUSTRIAL TRAINING/INTERNSHIP** **L T P C**
0 0 0 2

OBJECTIVE

- The main objective of the Industrial Training is to experience and understand real life

situations in industrial organizations and their related environments and accelerating the learning process of how student's knowledge could be used in a realistic way.

DURATION:
The students have to undergo practical industrial training for four weeks (During Sixth Semester holidays) in recognized industrial establishments.

I. At the end of the training they have to submit a report with following information:
   1. Profile of the Industry,
   2. Product range,
   3. Organization structure,
   4. Plant layout,
   5. Processes/Machines/Equipment/devices,
   6. Personnel welfare schemes,
   7. Details of the training undergone,
   8. Projects undertaken during the training, if any
   9. Learning points.

II. End Semester examination will be a Viva-Voce Examination during Seventh Semester

Course Outcomes
Upon completion of this course, the students will be able to:

CO1 : Compare and contrast theoretical concepts learned in academic coursework with practical applications observed in the industry.

CO2 : Implement best practices in project management, teamwork, and communication skills in a professional environment.

CO3 : Synthesize knowledge from various disciplines to address complex engineering problems in the industry.

CO4 : Demonstrate comprehension of safety protocols and regulations relevant to the industry setting.

CO5 : Develop a comprehensive report or presentation summarizing the internship experience, including project outcomes, lessons learned, and recommendations for future improvements.

MF7811	PROJECT WORK	L	T	P	C
		0	0	20	10

OBJECTIVE

- To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

A project topic must be selected by the students in consultation with their guides. The aim of the project work is to deepen comprehension of principles by applying them to a new problem which may be the design and fabrication of a device for a specific application, a research project with a focus on an application needed by the industry/society, a computer project, a management project or a design project.

The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated jointly by external and internal examiners constituted by the Head of the Department based on oral presentation and the project report.

TOTAL: 300 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Exhibit proficient technical expertise in their chosen project area.

CO2 : Analyse, identify, and resolve problems effectively, while providing regular reporting on progress and challenges encountered.

CO3 : Develop engineering solutions to intricate issues employing a systemic methodology, engaging in collaborative problem-solving efforts with team members and stakeholders.

CO4 : Embody the competencies, ethics, and demeanor characteristic of a professional engineer.

CO5 : Effectively communicate with both engineering peers and the broader community through written and oral mediums.

GE7071	DISASTER MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide students an exposure to disasters, their significance and types.
- To ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention and risk reduction
- To gain a preliminary understanding of approaches of Disaster Risk Reduction (DRR)
- To enhance awareness of institutional processes in the country and
- To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity

UNIT I INTRODUCTION TO DISASTERS 9

Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Disasters: Types of disasters – Earthquake, Landslide, Flood, Drought, Fire etc - Classification, Causes, Impacts including social, economic, political, environmental, health, psychosocial, etc.- Differential impacts- in terms of caste, class, gender, age, location, disability - Global trends in disasters: urban disasters, pandemics, complex emergencies, Climate change- Dos and Don'ts during various types of Disasters.

UNIT II APPROACHES TO DISASTER RISK REDUCTION (DRR) 9

Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community based DRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati Raj Institutions/Urban Local Bodies (PRIs/ULBs), States, Centre, and other stake-holders- Institutional Processess and Framework at State and Central Level- State Disaster Management Authority(SDMA) – Early Warning System – Advisories from Appropriate Agencies

UNIT III INTER-RELATIONSHIP BETWEEN DISASTERS AND DEVELOPMENT 9

Factors affecting Vulnerabilities, differential impacts, impact of Development projects such as dams, embankments, changes in Land-use etc.- Climate Change Adaptation- IPCC Scenario and Scenarios in the context of India - Relevance of indigenous knowledge, appropriate technology and local resources

UNIT IV DISASTER RISK MANAGEMENT IN INDIA 9

Hazard and Vulnerability profile of India, Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, Disaster Management Act and Policy - Other related policies, plans, programmes and legislation – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment.

UNIT V DISASTER MANAGEMENT: APPLICATIONS AND CASE STUDIES AND FIELD WORKS 9

Landslide Hazard Zonation: Case Studies, Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Evaluate the types of disasters, causes and their impact on environment and society.
CO2 : Evaluate the vulnerability using various methods of risk reduction measures and mitigation efforts
CO3 : Evaluate the inter-relationship between disaster and development.
CO4 : Design hazard and vulnerability profile of Indian scenario.
CO5 : Analyse the disaster damage assessment and management.

GE7074 **HUMAN RIGHTS** **L T P C**
3 0 0 3

OBJECTIVE

- To sensitize the Engineering students to various aspects of Human Rights.

UNIT I **9**

Human Rights – Meaning, origin and Development. Notion and classification of Rights – Natural, Moral and Legal Rights. Civil and Political Rights, Economic, Social and Cultural Rights; collective / Solidarity Rights.

UNIT II **9**

Evolution of the concept of Human Rights Magana carta – Geneva convention of 1864. Universal Declaration of Human Rights, 1948. Theories of Human Rights.

UNIT III **9**

Theories and perspectives of UN Laws – UN Agencies to monitor and compliance.

UNIT IV **9**

Human Rights in India – Constitutional Provisions / Guarantees.

UNIT V **9**

Human Rights of Disadvantaged People – Women, Children, Displaced persons and Disabled persons, including Aged and HIV Infected People. Implementation of Human Rights – National and State Human Rights Commission – Judiciary – Role of NGO's, Media, Educational Institutions, Social Movements.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Apply the basic principles of human rights.
CO2 : Analyse the evolution of human rights.
CO3 : Apply the UN Laws on human rights.
CO4 : Analyse the human rights scenario in India.
CO5 : Analyse the relationship between human rights and social movement.

GE7652 **TOTAL QUALITY MANAGEMENT** **L T P C**
3 0 0 3

AIM

To provide comprehensive knowledge about the principles, practices, tools and techniques of Total quality management.

OBJECTIVES

- To understand the need for quality, its evolution, basic concepts, contribution of quality gurus, TQM framework, Barriers and Benefits of TQM.
- To understand the TQM Principles.
- To learn and apply the various tools and techniques of TQM.
- To understand and apply QMS and EMS in any organization.

UNIT I INTRODUCTION 9

Introduction - Need for quality - Evolution of quality - Definition of quality - Dimensions of product and service quality –Definition of TQM-- Basic concepts of TQM –-Gurus of TQM (Brief introduction) -- TQM Framework- Barriers to TQM –Benefits of TQM.

UNIT II TQM PRINCIPLES 9

Leadership--The Deming Philosophy, Quality council, Quality statements and Strategic planning-- Customer Satisfaction –Customer Perception of Quality, Feedback, Customer complaints, Service Quality, Kano Model and Customer retention – Employee involvement – Motivation, Empowerment, Team and Teamwork, Recognition & Reward and Performance Appraisal-- Continuous process improvement –Juran Trilogy, PDSA cycle, 5s and Kaizen - Supplier partnership – Partnering, Supplier selection, Supplier Rating and Relationship development.

UNIT III TQM TOOLS & TECHNIQUES I 9

The seven traditional tools of quality – New management tools – Six-sigma Process Capability– Bench marking – Reasons to bench mark, Bench marking process, What to Bench Mark, Understanding Current Performance, Planning, Studying Others, Learning from the data, Using the findings, Pitfalls and Criticisms of Bench Marking – FMEA – Intent of FMEA, FMEA Documentation, Stages, Design FMEA and Process FMEA.

UNIT IV TQM TOOLS & TECHNIQUES II 9

Quality circles – Quality Function Deployment (QFD) – Taguchi quality loss function – TPM – Concepts, improvement needs – Performance measures-- Cost of Quality - BPR.

UNIT V QUALITY MANAGEMENT SYSTEM 9

Introduction—Benefits of ISO Registration—ISO 9000 Series of Standards—Sector-Specific Standards—AS 9100, TS16949 and TL 9000-- ISO 9001 Requirements—Implementation—Documentation—Internal Audits—Registration--ENVIRONMENTAL MANAGEMENT SYSTEM: Introduction—ISO 14000 Series Standards—Concepts of ISO 14001—Requirements of ISO 14001—Benefits of EMS.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the evolution of quality and its dimensions, evaluate the TQM framework's effectiveness, and apply basic concepts of TQM to overcome barriers.

CO2 : Analyse the Deming Philosophy's impact on leadership, design strategic quality statements for organizational alignment, and create effective customer satisfaction strategies for retention.

CO3 : Evaluate the effectiveness of employee involvement through motivation and empowerment, analyse continuous process improvement methodologies like the

Juran Trilogy, and apply supplier partnership strategies for relationship development.

CO4 : Analyse the utility of TQM tools such as Quality Circles and QFD, design processes using Taguchi quality loss function, and evaluate the performance measures against the cost of quality.

CO5 : Understand the benefits of ISO registration, evaluate ISO 9000 Series standards, design documentation for ISO 14001 compliance, and create environmental management systems for sustainable development.

ME7072 COMPUTATIONAL TECHNIQUES FOR FLUID DYNAMICS

L	T	P	C
3	0	0	3

OBJECTIVES

- To enable the students to understand the various discretization methods, solution procedures and turbulence modeling.
- To create confidence in solving complex problems in the field of fluid flow and heat transfer by using high speed computers.

UNIT I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS 9

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations – Chemical species transport –Physical boundary conditions – Time-averaged equations for Turbulent Flow – Turbulent–Kinetic Energy Equations – Mathematical behaviour of PDEs on CFD - Elliptic, Parabolic and Hyperbolic equations.

UNIT II FINITE DIFFERENCE AND FINITE VOLUME METHODS FOR DIFFUSION **9**

Derivation of finite difference equations – Simple Methods – General Methods for first and second order accuracy – Finite volume formulation for steady state One, Two and Three - dimensional diffusion problems –Parabolic equations – Explicit and Implicit schemes – Example problems on elliptic and parabolic equations – Use of Finite Difference and Finite Volume methods.

UNIT III FINITE VOLUME METHOD FOR CONVECTION DIFFUSION **9**

Steady one-dimensional convection and diffusion – Central, upwind differencing schemes properties of discretization schemes – Conservativeness, Boundedness, Transportiveness, Hybrid, Power-law, QUICK Schemes.

UNIT IV FLOW FIELD ANALYSIS **9**

Finite volume methods -Representation of the pressure gradient term and continuity equation – Staggered grid – Momentum equations – Pressure and Velocity corrections – Pressure Correction equation, SIMPLE algorithm and its variants – PISO Algorithms.

UNIT V TURBULENCE MODELS AND MESH GENERATION **9**

Turbulence models, mixing length model, Two equation (k-Є) models – High and low Reynolds number models – Structured Grid generation – Unstructured Grid generation – Mesh refinement – Adaptive mesh – Software tools.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Use the concepts of CFD and formulate governing equations for different systems.

CO2 : Compute the solutions for steady and transient diffusion problems using finite difference and finite volume methods.

CO3 : Implement various discretization schemes under finite volume method for convection diffusion systems.

CO4 : Evolve the solutions for complex fluid flow and heat transfer problems using various algorithms

CO5 : Apply the various turbulence models for the engineering systems

ME7073 DESIGN FOR MANUFACTURING

L	T	P	C
3	0	0	3

OBJECTIVE

To understand the design constraints in manufacturing and assembly operations.

UNIT I INTRODUCTION AND CASTING **9**

Introduction - Economics of process selection - General design principles for manufacturability; Design considerations for: Sand cast – Die cast – Permanent mold cast parts.

UNIT II FORMING **9**

Design considerations for: Metal extruded parts – Impact/Cold extruded parts – Stamped parts – Forged parts.

UNIT III WELDING **9**

Arc welding – Design considerations for: Cost reduction – Minimizing distortion – Weld strength – Weldment & heat treatment. Resistance welding – Design considerations for: Spot – Seam – Projection – Flash & Upset weldment.

UNIT IV MACHINING **9**

Design considerations for: Turned parts – Drilled parts – Milled, planed, shaped and slotted parts– Ground parts.

UNIT V ASSEMBLY **9**

Design for assembly – General assembly recommendations – Minimizing the no. of parts – Design considerations for: Rivets – Screw fasteners – Gasket & Seals – Press fits – Snap fits – Automatic assembly.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Interpret the economics and design of cast components.
CO2 : Design best manufacturing practices for forming of components.
CO3 : Formulate design consideration in the design of welded products.
CO4 : Develop design principles for machining.
CO5 : Apply principles of assembly in the design of assembly of parts

ME7077 ENTREPRENEURSHIP DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVE

- The students will be provided with an understanding of the scope of an entrepreneur, key areas of development, financial assistance by the institutions, methods of taxation and tax benefits, etc.

UNIT I ENTREPRENEURSHIP **9**

Entrepreneur – Characteristics – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Role of Entrepreneurship in Economic Development – Factors Affecting Entrepreneurial Growth – Economic, Non Economic, Government Actions.

UNIT II MOTIVATION **9**

Entrepreneurial Motivation: Theories and Factors, Achievement Motivation –Entrepreneurial Competencies – Entrepreneurship Development Programs – Need, Objectives – Business Game, Thematic Apperception Test, Self Rating, Stress management

UNIT III BUSINESS **9**

Small Enterprises – Definition, Characteristics, Project Identification and selection – Project Formulation: Significance, content, formulation of project report – Project Appraisal: Concept and method – Ownership Structures: Selection & Pattern.

UNIT IV FINANCING AND ACCOUNTING **9**

Finance: Need, Sources, Capital Structure, Term Loans – Financial Institutions – Accounting: Need, Objectives, Process, Journal, Ledger, Trial Balance, Final Accounts – Working Capital Management: Significance, Assessment, Factors, Sources, Management.

UNIT V SUPPORT TO ENTREPRENEURS **9**

Sickness in small Business: Concept, Signals, Symptoms, Magnitude, Causes and Consequences, Corrective Measures – Government Policy for Small Scale Enterprises: Growth Policy, Support. Institutional Support to Entrepreneurs: Need and Support – Taxation Benefits to Small Scale Industry: Need, Depreciation, Rehabilitation, Investment.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Explain the types, characteristics of entrepreneurship and its role in economic development.

CO2 : Apply the theories of achievement motivation and the principles of entrepreneurship development program.

CO3 : Select the appropriate form of business ownership in setting up an enterprise.

CO4 : Apply the fundamental concepts of finance and accounting to enterprise.

CO5 : Identify sickness in industry, select the appropriate corrective measures, and identify the growth strategies in enterprise.

ME7081 PROCESS PLANNING AND COST ESTIMATION

L	T	P	C
3	0	0	3

OBJECTIVE

- To give an understanding of the fundamentals of Process Planning and estimation of appropriate costs of processes and products and applying these to manage competitive manufacturing systems and organisations.

UNIT I INTRODUCTION TO PROCESS PLANNING 9

Aims and Objectives, Place of process planning in Manufacturing cycle, Drawing interpretation, Dimensional tolerance vs Production processes.

UNIT II PROCESS PLANNING STEPS 9

Design of a process plan – Selection of production processes, tools and process parameters-Positioning and work holding devices, Selection of inspection devices and tools, Documenting the process plan, Simple Case studies.
Computer-Aided Process Planning (CAPP) – Benefits, Architecture and approaches.

UNIT III INTRODUCTION TO COST ESTIMATION 9

Importance, Types, Purpose, Components, Procedure, Classification of costs, Cost elements, Overhead expenses, Break-even analysis.

UNIT IV PRODUCTION COST ESTIMATION 9

Estimation of production cost for - Casting processes, Welding processes, and Forging processes.

UNIT V ESTIMATION OF MACHINING TIME AND COST 9

Estimation of Machining time – Lathe operations, Drilling, Milling, Shaping and Planing, and Grinding, Cost estimation for machining processes.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Explain the Process flow for a given Product.
CO2 : Create a process plan for manufacturing a component.
CO3 : Estimate the overhead cost associated with manufacturing plant.
CO4 : Evaluate the total cost for the Cast, welded and Forged products.
CO5 : Analyse the machining time and estimate the cost of machined product.

ME7082	PRODUCT DESIGN AND DEVELOPMENT	L	T	P	C
		3	0	0	3

OBJECTIVE

- To understand the basic concepts of Product Design and Process Development.
- To appreciate the importance, various stages, concepts, management and prototyping of products.

UNIT I INTRODUCTION **9**

Introduction – Characteristics of Successful Product Development – Duration and cost of Product Development – Challenges – Generic Development Process – Concept Development: the Front End Process – Adaptation of the Generic Product Development Process – Product Development Process Flow – Product Development Organization.

UNIT II PRODUCT PLANNING, IDENTIFYING CUSTOMER NEEDS, PRODUCT SPECIFICATION **9**

Product Planning Process: Identification of opportunities; evaluation and prioritization of projects; allocation of resources & plan timing; completion of pre-project planning. Identification of Customer Needs: Collection of raw data from customers; interpretation of raw data of customer needs;
organization of the needs into a hierarchy; establishment of relative importance of needs. Product Specifications: Establishment of Target Specifications, Setting-up of Final Specifications.

UNIT III CONCEPT GENERATION, SELECTION, TESTING **9**

Concept Generation: clarification of the problem; searching externally; searching internally, systematic exploration. Concept Selection: concept screening steps; concept scoring steps. Concept Testing: Defining the purpose of concept test; choosing a survey population; format; communicating the concept; measuring the customer response; interpretation of results.

UNIT IV PRODUCT ARCHITECTURE, INDUSTRIAL DESIGN, DESIGN FOR MANUFACTURE **9**

Product Architecture: Types of modularity – Implications – Establishing the Architecture – Platform Planning. Industrial Design: Assessing the need – Impact – Design Process. Design for Manufacturing: estimation of manufacturing costs; reduction of costs of components, assembly, supporting production; other factors.

UNIT V PROTOTYPING AND MANAGING PRODUCTS **9**

Prototype Basics – Principles of Prototyping – Prototyping Technologies – Planning for Prototypes. Management of Projects: Understanding and representing Tasks – Baseline Project Planning – Accelerating Projects – Project Execution – Postmortem Project Evaluation.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Apply the principles of generic development process; conduct customer need analysis; and set product specification for new product design and development.

CO2 : Create and Generate concepts for new product design and development.

CO3 : Implement the principles of product architecture and industrial design to design and develop new products.

CO4 : Select the principles of DFMA and Prototyping for new product development.

CO5 : Adapt the concepts of economics principles; project management practices in the development of new product.

MF7001 MEMS AND MICRO SYSTEM FABRICATION

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the mechanics, scaling and design of micro system.
- To learn various micro fabrication processes.
- To impart knowledge on microsystems packaging and metrology of micro machined components.

UNIT I INTRODUCTION **9**

Overview of MEMS and Microsystems: MEMS and Microsystems, Evolution of Micro fabrication, Microsystems and Microelectronics, Microsystems and miniaturization-Materials for MEMS and Microsystems:substrates and wafers, active substrate materials,Silicon,Galium Arsenide, Piezoelectric Crystals, Polymers, Packaging materials-Working principles of Microsystems: micro sensors, micro actuation, MEMS with micro actuators, Micro accelerometers, micro fluidics- Applications of Microsystems in various industries.

UNIT II MECHANICS, SCALING AND DESIGN **9**

Engineering Mechanics for Microsystems design: Introduction, Static bending of Thin Plates, Mechanical Vibration, Thermomechanics, Thermofluid Engineering and micro system design, Laminar fluid flow, Incompressible fluid Flow, Heat conduction in solids-Scaling Laws in Miniaturization, Introduction to scaling, Scaling in (Electrostatic forces electromagnetic forces, Electricity, fluid mechanics, heat transfer)-Microsystems Design: Design Consideration, Process design, Mechanical Design, Design of Micro fluidic Network systems.

UNIT III MICRO SYSTEM FABRICATION PROCESSES **9**

Introduction- Photolithography- Ion implantation- Chemical Vapor deposition-Physical Vapor deposition - clean room- Bulk micromachining :etching, isotropic and anisotropic etching, wet and dry etching- Surface micro machining :process, mechanical problems associated with surface micro machining- LIGA process :general description, materials for substrates and photo resists- SLIGA process-Abrasive jet micro machining-Laser beam micro machining-Micro Electrical Discharge Micro Machining –Ultrasonic Micro Machining- Electro chemical spark micro machining- Electron beam micro machining-Focused Ion Beam machining.

UNIT IV TOOL BASED MICROMACHINING **9**

Theory of tool based micromachining-Chip formation-size effect in micromachining-micro turning, micro milling, and micro drilling- Micromachining tool design-Precision Grinding-Partial ductile mode grinding-Ultra precision grinding- Binderless wheel Free form optics.

UNIT V MICROSYSTEMS PACKAGING AND METROLOGY OF MICRO MACHINED COMPONENTS **9**

Introduction - Microsystems Packaging-Interfaces in Microsystems Packaging-Essential Packaging Technologies-Three dimensional Packaging- Assembly of Microsystems-Signal Mapping and Transduction-Metrology of Micromachined components: SEM, optical microscopy, Scanning white light interferometry, Confocal Laser scanning microscopy, SPM, Molecular measuring machine, Micro coordinate measuring machine.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Select suitable material for MEMS and Microsystems, and explain the scaling laws involved in miniaturization

CO2 : Understand the mechanics, scaling concepts and design of MEMS systems.

CO3 : Be acquainted with various micro fabrication technologies

CO4 : Understand the concepts of tool based micromachining processes.

CO5 : Demonstrate various microsystems packaging and measurement of micro machined components

MF7002 NANO COATING L T P C
3 0 0 3

OBJECTIVES

- To understand the basics of Nanostructured coatings.
- To understand about different coating methods and characterization of Nano coatings.
- To understand the properties change due to coatings and also the applications.

UNIT I INTRODUCTION TO NANOSTRUCTURED COATING 9

Introduction of Nanotechnology - Production of Nanoparticles - Applications of Nanoparticles - Thin Films - Significance of Thin Films - Production of Thin Films - Applications of Thin films - Coating and Surface Engineering - Coating Issues and Applications.

UNIT II NANOSTRUCTURED COATINGS 9

Sol - gel Method - Chemical Reactions - Effect of Catalyst Hydrolysis - Electric Precipitation - Rotate Coating - Scattering Coating - Plasma Polymerization - Annealing - Heating Oxidation Thermal Spraying Nano - Composites - Transitional Metal Nitride Coatings - Super Rough and Super Hard - Nanocrystalline Coatings - Nanocomposite Coatings.

UNIT III CHARACTERISATION OF NANOCOATINGS 9

Thermodynamics of Nanostructured Materials - Interfaces Thermodynamics - Interface Traction - Interface Stresses - Chemical Equilibrium in Curved Interface - Influential Interface - Phase Interface - Measurement of Thermal and Electrochemical Properties - Condensed and Compressed Metals - Nano -Technological Compatibility in Coating - Improvement of Coating Quality - Abrasion, Scratch and Corrosion Resistant Coatings - Alumina as a Scratch and Abrasion Resistant - Corrosion resistant.

UNIT IV PROPERTIES OF NANOSTRUCTURED COATINGS 9

Mechanical Properties - Effects of Participation of Nanoparticles in Nano coating - Size Effect - Effective Factors on Simultaneous Deposition - Effect of Density - Effect of Current Density - Effect of pH - Pulse Current Effect - Tensile and Fatigue Strength Physical Properties - Size Effect in Sensing Characterization - Thermal Stability - Optical properties.

UNIT V APPLICATIONS OF NANOCOATINGS 9

Surface Improvement for Making Fog and Vapor Resistant Layers - Self-Cleaning Glasses - Medical and Hygienic Applications - Food Packaging - Electrical and Electronic Applications - Lubricating Applications - Automobile industries - Defence applications.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the production and applications of nanoparticles in Nano coatings, and evaluate their significance in surface engineering and thin film technology.

CO2 : Analyse various methods such as sol-gel, electric precipitation, and plasma polymerization for creating nanostructured coatings, and design innovative approaches for coating deposition.

CO3 : Apply thermodynamic principles to characterize Nano coatings, evaluate their mechanical and physical properties, and design coatings resistant to abrasion, scratch, and corrosion.

CO4 : Analyse the effects of nanoparticle participation on mechanical properties, evaluate size effects in sensing characterization, and design nanocomposite coatings for specific applications such as self-cleaning glasses and medical devices.

CO5 : Understand the diverse applications of Nano coatings in surface improvement, evaluate their suitability in electrical, electronic, and automotive industries, and design advanced coatings for defence applications.

MF7003 NON DESTRUCTIVE EVALUATION

L	T	P	C
3	0	0	3

OBJECTIVE

- To make students to understand various Non Destructive testing methods including advanced techniques, with emphasis on basic principles, limitations and application areas

UNIT I INTRODUCTION **9**

Visual methods: Optical aids - In-situ metallography - Optical holographic methods - Dynamic inspection.

UNIT II LIQUID PENETRANT & MAGNETIC INSPECTION **9**

Penetrant systems: Principles - Process - Liquid penetrant materials - Emulsifiers-cleaners developers - sensitivity - Advantages - Limitations and Applications. Magnetic methods: Advantages - Limitations - Methods of generating fields: magnetic particles and suspending liquids Magnetography - field sensitive probes: applications. Measurement of metal properties.

UNIT III RADIOGRAPHIC METHODS **9**

Principles of radiography - sources of radiation - Ionising radiation - sources-X-rays - Alpha - Beta and Gamma rays - Recording of radiation - Radiographic sensitivity - Fluoroscopic methods - special techniques - Radiation safety. Advantages - Limitations and applications.

UNIT IV ULTRASONIC TESTING OF MATERIALS **9**

Ultrasonic testing: Principle - Advantages - disadvantages - Applications - Generation of Ultrasonic waves - general characteristics of ultrasonic waves: methods and instruments for ultrasonic materials testing: special techniques.

UNIT V ELECTRICAL AND OTHER METHODS **9**

Electrical methods: Eddy current methods: potential - drop methods, applications-Other methods: Acoustic Emission methods - Acoustic methods: Leak detection: Thermal inspection.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Choose the right method of testing for detection of defects on various materials.
CO2 : Understand to operate advanced NDT instruments and equipment easily.
CO3 : Know the safety procedures of operating the NDT equipment and follow them.
CO4 : Exploit the advantages of NDT in industrial applications for the benefit of the society.
CO5 : Demonstrate how to Identify the nature and quantify the defects

MF7004 PLASTICITY THEORY AND METAL FORMING **L T P C**
3 0 0 3

OBJECTIVE

- At the end of the course the student should be able to understand the theory of plasticity and the advances in metal forming

UNIT I FUNDAMENTALS OF ELASTICITY 9

Brief review of elasticity- Octahedral normal and shear stresses-Spherical and deviatoric stress, Invariance in terms of the deviatoric stresses- Representative stress. Idealised stress-strain diagrams for different material models, Engineering and natural strains, Mathematical relationships between true stress and true strains, Cubical dilation, finite strains coefficients Octahedral strain, Strain rate and the strain rate tensor.

UNIT II YIELD CRITERIAS 9

Yield criteria for ductile metal, Von Mises, Tresca, Yield surface for Isotropic Plastic materials, Stress space, Experimental verification of Yield criteria, Yield criteria for an anisotropic material.

UNIT III STRESS STRAIN RELATIONS 9

Stress - Strain Relations, Plastic stress-strain relations, Prandtl Roeuss Saint Venant, Levy - Von Mises, Experimental verification of the Prandtl-Rouss equation, Yield locus, Symmetry convexity, Normality rule., Upper and lower bound theorems and corollaries.

UNIT IV APPLICATION TO PROBLEMS 9

Uniaxial tension and compression, bending of beams, Torsion of rods and tubes, Simple forms of indentation problems using upper bounds. Problems of metal forming - Extrusion, Drawing, Rolling and Forging.

UNIT V SLIP LINE THEORY 9

Introduction, Basic equations for incompressible two dimensional flows, continuity equations, Stresses in conditions of plain strain convention for slip-lines, Geometry of slip lines, Properties of slip lines.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the theory of elasticity
CO2 : Apply yield criteria for plastic deformation
CO3 : Apply stress strain relations to plastic deformations
CO4 : Solve problems in metal forming
CO5 : Understand the Slip line theory

MF7005	**PRECISION ENGINEERING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVE

- To provide and enhance the technical knowledge in precision engineering, its components and applications.

UNIT I ELEMENTS OF PRECISION ENGINEERING 9

Introduction - Precision, Accuracy & Smoothness - Need - Development of overall machining precision-Classes of achievable machining Accuracy - Precision machining - High precision Machining-Ultra precision Machining-application of precision machining - Materials for tools and machine elements - carbides - ceramic, CBN & diamond - Tool and work material compatibility.

UNIT II PRECISION MACHINE COMPONENTS 9

Introduction - Guide ways - Drive systems - Spindle drive - preferred numbers - Rolling elements - hydrodynamic & hydrostatic bearings - Hybrid fluid bearings - Aero static and aero dynamic bearings - Hybrid gas bearings - materials for bearings

UNIT III ERROR CONTROL 9

Error - Sources - Static stiffness - Variation of the cutting force - total compliance - Different machining methods - Thermal effects - heat source - heat dissipation - Stabilization - decreasing thermal effects - forced vibration on accuracy - clamping & setting errors - Control - errors due to locations - principle of constant location surfaces.

UNIT IV PRECISION MANUFACTURING 9

Micro machining processes - diamond machining - micro engraving - Micro replication techniques - forming - casting - injection moulding - micro embossing - Energy assisted processes - LBM,

EBM, FIB, Micro electro discharge machining-photolithography - LIGA process- Silicon micro machining- Wet and dry etching-thin film deposition.

UNIT V MEMS **9**

Introduction - MEMS - characteristics- principle - Design - Application: automobile, defence, health care, Industrial, aerospace etc.,

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Gain knowledge on elements of precision engineering
CO2 : Be familiarized with precision machine components
CO3 : Describe the concept of error control.
CO4 : Apply the concepts of precision manufacturing.
CO5 : Be acquainted with MEMS and its applications.

MF7006 PROCESSING OF PLASTICS AND COMPOSITE MATERIALS **L T P C**
3 0 0 3

OBJECTIVE

- The purpose of this subject is to equip the students with the knowledge of processes utilized in developing materials or making components using plastics and composite materials. This subject develops the competence of the students in major industrially practiced processing techniques.

UNIT I INTRODUCTION TO PLASTICS AND COMPOSITE 9

Chemistry and Classification of Polymers - Properties of Thermo Plastics - Properties of Thermosetting Plastics – Elastomers- Applications - Merits and Disadvantages - Fibres - Glass, Boron, Carbon, Organic, Ceramic and Metallic Fibers - Matrix Materials - Polymers, Metals and Ceramics.

UNIT II PROCESSING OF PLASTICS 9

Thermoplastics: Extrusion moulding- Injection Moulding - Blow Moulding - Rotational moulding - calendaring - Film blowing - thermoforming - Thermoset plastics: Compression, Transfer Moulding, Jet moulding, Laminated plastics - Casting - Machining of Plastics: Machining Parameters and their effect - Joining of Plastics - Mechanical Fasteners - Chemical bonding- Thermal bonding - Thermal welding.

UNIT III PROCESSING OF POLYMER MATRIX COMPOSITES 9

Open Mould Processes, Bag Moulding, Compression Moulding with BMC and SMC - Filament winding - Pultrusion - Centrifugal Casting - Injection Moulding - Application of PMC's.

UNIT IV PROCESSING OF METAL MATRIX COMPOSITES 9

Solid State Fabrication Techniques - Diffusion Bonding - Powder Metallurgy Techniques - Plasma Spray, Chemical and Physical Vapour Deposition of Matrix on Fibres - Liquid State Fabrication Methods: Infiltration - Squeeze Casting - Rheo Casting - Compo casting - Application of MMC's.

UNIT V PROCESSING OF CERAMIC MATRIX COMPOSITES 9

Coldpressing and sintering - hot pressing-rection bonding processes - Liquid infiltration - Lanxide process - In situ chemical reaction techniques: chemical vapour infiltration - chemical vapour deposition-Reactive consolidation - sol - gel techniques - pyrolysis - self propogating high temperature synthesis - Electropherotic deposition - Application of CMC's.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the chemistry and classification of polymers, evaluate the properties of thermo plastics and thermosetting plastics, and create a comprehensive understanding of elastomers and their applications.

CO2 : Analyse various processing techniques for plastics including extrusion molding, injection molding, and blow molding, and design efficient manufacturing processes for thermoplastics and thermoset plastics.

CO3 : Apply open mold processes and filament winding in processing polymer matrix composites, evaluate the advantages of different methods, and create optimized manufacturing strategies for PMC applications.

CO4 : Evaluate solid-state fabrication techniques and powder metallurgy techniques in processing metal matrix composites, Analyse the effectiveness of different methods, and design innovative approaches for MMC fabrication.

CO5 : Understand cold pressing and sintering, hot pressing, and reaction bonding processes in processing ceramic matrix composites, apply in situ chemical reaction techniques, and design advanced manufacturing processes for CMCs.

MF7007 QUALITY CONTROL AND RELIABILITY ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES

- Teach the essentiality of SQC, sampling and reliability engineering. Study on various types of control charts, six sigma and process capability to help the students understand various quality control techniques.
- Reliability engineering focuses on the dependability, failure mode analysis, reliability prediction and management of a system.

UNIT I STATISTICAL QUALITY CONTROL **9**

Quality as a competitive priority - Methods and Philosophy of Statistical Process Control - Control Charts for Variables and Attributes - Cumulative sum and Exponentially weighted moving average control charts - Other SPC Techniques - Process - Capability Analysis - Six sigma concept.

UNIT II ACCEPTANCE SAMPLING **9**

Reasons for acceptance sampling - Acceptance Sampling Problem - Single sampling plans for attributes - double sampling - multiple sampling - sequential sampling - Military standards - The Dodge Roming sampling plans - Random sampling

UNIT III RELIABILITY ENGINEERING **9**

Definition of reliability - Performance and reliability - Reliability requirements - System life cycle - Mean time between failures - Mean time to failure - Mortality Curve - Availability - Maintainability.

UNIT IV FAILURE DATA ANALYSIS **9**

Statistical failures of components - failure distributions – Bath tub curve - Negative exponential distribution - Normal distribution - log normal distribution – Gamma distribution - Weibull distribution Life distribution measurements - Accelerated life tests - Data requirements for reliability.

UNIT V RELIABILITY PREDICTION AND MANAGEMENT **9**

Failure rate estimates - Effect of environment and stress - Series and Parallel systems - RDB analysis - Standby Systems - Complex Systems - Reliability demonstration testing - Reliability growth testing - Duane curve - Risk assessment - FMEA and Fault tree analysis.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Know and apply various quality tools to tackle dynamic industrial situations.
CO2 : Give a quality index to an industrial situation following an engineering approach.
CO3 : Estimate process capability and take remedial actions at the right time to have the processes under control.
CO4 : Perform failure data analysis and bring useful insight on the performance of systems.
CO5 : Apply reliability, various modes of failures, maintenance, replacement of machineries and equipment at the right time and be instrumental in enriching the industrial culture with quality policy leading to higher productivity.

MF7008	RENEWABLE ENERGY SOURCES	L	T	P	C
		3	0	0	3

AIM:

To instruct the importance of renewable energy and its utilization for the thermal and electrical energy needs and also the environmental aspects of these resources.

OBJECTIVE:

At the end of the course, the student expected to understand and Analyse the pattern of renewable energy resources Suggest methodologies / technologies for its utilization. Economics of the utilization and environmental merits

UNIT I SOLAR ENERGY **9**

Solar Radiation - Measurements of solar Radiation and sunshine - Solar Thermal Collectors - Flat Plate and Concentrating Collectors - Solar Applications - fundamentals of photo Voltaic Conversion - solar Cells - PV Systems - PV Applications.

UNIT II WIND ENERGY **9**

Wind Data and Energy Estimation - wind Energy Conversion Systems - Wind Energy generators and its performance - Wind Energy Storage - Applications - Hybrid systems.

UNIT III BIO – ENERGY **9**

Biomass, Biogas, Source, Composition, Technology for utilization - Biomass direct combustion - Biomass gasifier - Biogas plant - Digesters - Ethanol production - Bio diesel production and economics.

UNIT IV OTEC, TIDAL, GEOTHERMAL AND HYDEL ENERGY **9**

Tidal energy - Wave energy - Data, Technology options - Open and closed OTEC Cycles - Small hydro, turbines - Geothermal energy sources, power plant and environmental issues.

UNIT V NEW ENERGY SOURCES **9**

Hydrogen, generation, storage, transport and utilisation, Applications: power generation, transport - Fuel cells - technologies, types - economics and the power generation.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of the course the students will be able to

CO1 : Gauge the solar energy and apply suitable technologies for harnessing them.

CO2 : Quantify wind energy and deploy appropriate devices for energy generation
CO3 : Recover energy from biomass adopting proper concepts.
CO4 : Employ appropriate engineering principles for tapping energy from ocean and geothermal resources.
CO5 : Understanding of hydrogen technology, encompassing the principles of hydrogen generation, storage, transport, and utilization, as well as its applications in power generation and transportation.

MF7009 **SUSTAINABLE MANUFACTURING** **L T P C**
3 0 0 3

OBJECTIVE

To impart knowledge on sustainable manufacturing, polices, best practices for sustainable manufacturing, lean manufacturing, green energy, sustainable machinery, energy consumption, hazardous management and recyclability.

UNIT I SUSTAINABLE MANUFACTURING AND POLICIES **9**

Introduction to sustainable manufacturing - Origins of sustainable manufacturing - Sustainable manufacturing concepts - Indian/European/US environmental policies - Legislative, cultural, societal and political issues - Sustainable quality systems - Emission less manufacturing - Comparison between green, eco-manufacturing, eco- machining, clean manufacturing and sustainable manufacturing.

UNIT II SUSTAINABILITY MANUFACTURING BEST PRACTICES 9

Introduction to best practices of sustainability manufacturing – Manufacturability issues in sustainable product design - Environmentally conscious design/manufacturing processes - Societal impact - Product functionality, serviceability, maintainability, upgradability - Innovative product/process designs for sustainability - Preservation of sustainable development.

UNIT III LEAN MANUFACTURING AND GREEN ENERGY 9

Introduction to lean Manufacturing - Lean manufacturing tools - Comparison of conventional manufacturing and lean Manufacturing - Advantages and Limitations of lean Manufacturing. Introduction to green energy concepts - Green house effect - Global warming - Climate change - Environmental degradation– Environmental pollution – Pollution due to manufacturing industries - Remedies.

UNIT IV SUSTAINABLE MACHINERY AND ENERGY CONSUMPTION 9

Selection of appropriate machine, materials, energy, resource utilisation for sustainability manufacturing – Performance evaluation of different machinery and its components in terms of energy consumption - Causes for inefficient operations of machinery – Scope for energy conservation - World energy consumption - Determination of power demand and consumption - Comparison of power generation cost using renewable and non- renewable sources.

UNIT V HAZARDOUS MANAGEMENT AND RECYCLABILITY 9

Introduction to hazardous management in industries – Need for hazardous waste management - Appropriate method of collection, storage, transport and disposal of hazardous waste - Hazardous waste prevention and Life cycle assessment - Advantages and limitations of hazardous management - Recyclability: Recycling, recharging, disassembly, recovery, remanufacturing - End-of-life and product take-back issues - Training of next generation workforces for sustainable manufacturing

TOTAL: 45 PERIODS

Course Outcomes

Upon successful completion of this course, students will be able to:

CO1 : Define key concepts of sustainable manufacturing and environmental policies.
CO2 : Analyse best practices for sustainable product design and societal impact.
CO3 : Explain the principles of lean manufacturing and green energy.
CO4 : Evaluate factors affecting machinery performance and energy consumption.
CO5 : Describe hazardous waste management practices and the concept of recyclability.

MF7010	SYSTEM SIMULATION	L	T	P	C
		3	0	0	3

OBJECTIVE

- To understand the importance and advantages of applying simulation techniques for solving various problems on discrete event systems.
- To teach various random number generation techniques, its use in simulation, tests and validity of random numbers etc. Development of simulation models, verification, validation and analysis. Introduction to various simulation languages and comparison.

UNIT I INTRODUCTION **9**

History of simulation - Concept - Types of simulation - System: system components - simulation as a decision making tool - Advantages and limitations of simulation - Applications - Monte Carlo simulation-Simulators.

UNIT II RANDOM NUMBERS/VARIATES **9**

Generation of Random numbers - Applications - Pseudo random numbers - methods of generating random variates - random variates for uniform, normal, binominal, Poisson, exponential distributions. Test for random numbers such as Kolmogorov smirnov, chi square, Autocorrelation - Poker’s test.

UNIT III DESIGN OF SIMULATION EXPERIMENTS **9**

Problem formulation – data collection and reduction – logic developments – initial conditions – run length, tabular method of simulation – development of models using higher level languages

for systems like queuing, production, inventory and maintenance – output analysis and interpretation, validation.

UNIT IV DISCRETE SYSTEM SIMULATION LANGUAGES 9

Need for simulation language - Comparison of simulation languages: SIMCRIPT, GASP, SIMULA, GPSS, PROMODEL, EXTEND, ARENA and FLEXSIM.

UNIT V QUEUING POLICIES, ALGORITHMS AND CASE STUDIES 9

Introduction to basic Single - pass heuristics, meta-heuristics and applications - Application of Genetic algorithms and Ant colony based algorithms in Discrete event simulation models with simple examples. Development of simulation models using the simulation language studies for systems for systems like, queuing systems, production systems, inventory systems, maintenance and replacement systems, investment analysis and network. Manual simulation problems

TOTAL: 45 PERIODS

Course Outcomes

Upon successful completion of this course, students will be able to:

CO1 : Understand industrial scenarios, involve in intelligent questioning sessions with experts to get clear insight about the problem and build appropriate simulation models.

CO2 : Understand the type of model to be built suiting to the industrial situation and choose right measures of performances for evaluation and analysis.

CO3 : Justify their findings with statistical analysis and successfully compromise the management in implementing their proposed ideas and produce results

CO4 : Understand simulation models developed in other simulation software and involve in expert suggestions to improvise the same.

CO5 : Simulate situations through their own models and show the effects of altering them.

MF7011 **THEORY OF METAL CUTTING** **L T P C**
3 0 0 3

OBJECTIVE

- To learn tool nomenclature, mechanical of metal cutting and forces in metal cutting.
- To know the thermal aspects in machining, tool materials, tool life and wear mechanisms

UNIT I TOOL NOMENCLATURE 9

Single point tool-significance of the various angles provided and nose radius-American, German CIRP and orthogonal system of tool nomenclature, nomenclature of drills, milling cutters and broaches-grinding wheels, Need for chip breakers.

UNIT II MECHANICS OF METAL CUTTING 9

Mechanisms of formation of chips-types of chips and the conditions conducive for the formation of each type built- up edge, its effects orthogonal Vs oblique cutting-Merchant's circle diagram-Force and Velocity relationship, shear plane angle, Energy considerations in matching-Ernst Mechant's theory of shear angle relationship-original assumption and modifications made.

UNIT III FORCES IN MACHINING 9

Forces in turning, drilling, milling and grinding, conventional Vs climb milling-mean and maximum cross sectional areas of chip in milling-specific cutting pressure-specific horse power-requirements of tool dynamometers-construction and principle of operation of tool dynamometers for turning, drilling and milling.

UNIT IV THERMAL ASPECTS IN MACHINING 9

Sources of heat generation in machining-temperature measurement techniques in machining, Functions of cutting fluid-characteristics of cutting fluid-types, modes of applications, additives-application of cutting fluids- dry machining, Minimum Quantity Lubrication (MQL) machining.

UNIT V TOOL MATERIALS, TOOL WEAR AND TOOL LIFE 9

Requirements of tool materials-advances in tool materials-HSS, coated HSS, carbides and coated carbides, ceramic, cold pressed, hot pressed, ceramic composites, CBN, PCD, properties, advantages and limitations-ISO-specifications for inserts and tool holders, tool wear, type mechanisms, tool life, machinability, economics of machining, chatter in machining.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand various tool nomenclatures.
CO2 : Demonstrate the knowledge on metal cutting.
CO3 : Acquaint with cutting forces in machining.
CO4 : Familiarize with thermal aspects of metal cutting
CO5 : Gain knowledge on tool materials, tool wear and tool life.

MF7012 VALUE ENGINEERING AND RE ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand and Analyse the theory and methodology of Value Engineering with the Guidelines, Performa and Checklist for a systematic, step by step application of the technique to the current industrial problems.
- To provide the knowledge about Reengineering Principles, the various models and implementation method, which are adopted in the industry.

UNIT I FUNDMENTALS OF VALUE ENGINEERING 9

Value Types - How to add value job plan - Technique employed - Selection of project and team members - Value Engineering Job Plan - Benefits - Audit.

UNIT II VALUE ENGINEERING AND JOB PLAN 9

General and information phase - Function Classification, Fast diagram - Meaningful costs -Cost analysis - idea listing and comparison - Feasibility ranking - Investigator phase, study summary - guidelines for writing value engineering proposal - Financial aspects - List cycle cost analysis - Oral presentation - Audit - Case studies and Discussion.

UNIT III REENGINEERING PRINCIPLES 9

The 6R's of organizational transformation and reengineering - process reengineering - preparing the workforce - Principles of Transformation and Reengineering - Methodology - Organizational Transformation Guidelines.

UNIT IV REENGINEERING PROCESS IMPROVEMENT MODELS 9

Transformation Models - Performance Improvement Model - PMI leadership expectation - Production and service improvement model - Moen and Nolan Strategy Model - Quality Models - Personal and Process improvement.

UNIT V IMPLEMENTATION OF REENGINEERING 9

Process analysis techniques - Work flow analysis - Value analysis approach - Nominal group technique - Fish bone diagram - Pareto analysis - team building - Force field analysis - Implementation.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the fundamentals of Value Engineering
CO2 : Gain domain knowledge to do value analysis
CO3 : Understand the Re-Engineering Principles
CO4 : Understand the Reengineering Process Improvement models
CO5 : Implement the Reengineering

MF7071 ADDITIVE MANUFACTURING TECHNOLOGY L T P C
3 0 0 3

OBJECTIVE

- To know the principle, methods, possibilities and limitations as well as environmental effects of Additive Manufacturing technologies.

- To be familiar with the characteristics of the different materials those are used in Additive Manufacturing technologies.

UNIT I INTRODUCTION 9

Overview – Need - Development of Additive Manufacturing Technology -Principle –AM Process Chain- Classification –Rapid Prototyping- Rapid Tooling – Rapid Manufacturing – Applications- Benefits –Case studies.

UNIT II DESIGN FOR ADDITIVE MANUFACTURING 9

Design tools: Data processing - CAD model preparation – Part orientation and support structure generation – Model slicing –Tool path generation- Design for Additive Manufacturing: Concepts and objectives- AM unique capabilities – DFAM for part quality improvement- Customised design and fabrication for medical applications.

UNIT III PHOTOPOLYMERIZATION AND POWDER BED FUSION PROCESSES 9

Photo polymerization: SLA-Photo curable materials – Process - Advantages and Applications. Powder Bed Fusion: SLS-Process description – powder fusion mechanism – Process Parameters–Typical Materials and Application. Electron Beam Melting.

UNIT IV EXTRUSION BASED AND SHEET LAMINATION PROCESSES 9

Extrusion Based System: FDM-Introduction – Basic Principle – Materials – Applications and Limitations – Bioextrusion. Sheet Lamination Process:LOM- Gluing or Adhesive bonding – Thermal bonding.

UNIT V PRINTING PROCESSES AND BEAM DEPOSITION PROCESSES 9

Droplet formation technologies – Continuous mode – Drop on Demand mode – Three Dimensional Printing – Advantages – Bioplotter - Beam Deposition Process: LENS- Process description – Material delivery – Process parameters – Materials – Benefits – Applications.

TOTAL: 45 PERIODS

Course Outcomes

Upon successful completion of this course, students will be able to:

CO1 : Gain a comprehensive understanding of Additive Manufacturing (AM) technology, encompassing its principles, classification, and applications.

CO2 : Analyse and apply design principles specific to AM processes to optimize part quality and create customized designs, particularly for medical applications.

CO3 : Acquire knowledge of Photo polymerization and Powder Bed Fusion processes, and remember curing and powder fusion mechanism, materials, applications.

CO4 : Understand the working principle and advantages of Extrusion based and Sheet Lamination AM technologies like FDM and LOM.

CO5 : Understand the working principle, advantages, limitations, and evaluate applications of 3D Printing and LENS processes.

MF7072 ELECTRONICS MATERIALS AND PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVE

- To describe the basic processes of materials that are used to fabricate semiconductor and MEMS devices.
- To learn the thermal considerations of electronic materials.

UNIT I INTRODUCTION **9**

Overview of semiconductors and other basic materials - Plastics, Elastomers, and Composites - tables with material properties, terms and definitions, trade names, and material structure correlation, basic electronic components and its metallurgical structure. Carrier generation and recombination; junctions; photovoltaic materials and devices.

UNIT II ORGANIC MATERIALS AND PROCESSES **9**

Types and properties of organic materials, manufacturing technique –Vacuum Metallization, Vapour phase deposition, Thermal Imaging, Digital Lithography, Application areas.

UNIT III MEMS MATERIALS AND PROCESS **9**

MEMS design process- Methods, Selection of materials for process, Optimization techniques in design, Over view of additive process of Semiconductors, Dielectric materials, Metals, and Polymer Materials, Piezoelectric materials, Shape memory alloys , Micromachining techniques, packaging methods

UNIT IV MATERIALS SYSTEMS **9**

Solder technologies for electronic packaging and assembly, Electroplating and Deposited metallic coatings, Printed circuit board fabrication, Materials and Processes for Hybrid Microelectronics and Multichip modules. Adhesives under fills, and Coatings in electronics assemblies.

UNIT V THERMAL MANAGEMENT OF MATERIALS AND SYSTEMS **9**

Temperature effects on circuit operation and physical construction. Laws of heat transfer mechanism and their considerations in the manufacturing process. Thermal management in packaging of electronic materials

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Familiarize with various electronics materials and their properties.
CO2 : Understand the types and properties of organic materials, manufacturing techniques.
CO3 : Gain knowledge on various MEMS materials and its processes.
CO4 : Apply the concepts of soldering, PCB assembly and coating processes.
CO5 : Recognize the thermal aspects of electronic materials and systems.

MF7073 ELECTRONICS MANUFACTURING TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVE

- To understand wafer preparation and PCB fabrication, the types of Mounting Technologies and components for electronics assembly & SMT process in detail.
- To know various Defects, Inspection Equipments SMT assembly process and repair, rework and quality aspects of Electronics assemblies.

UNIT I INTRODUCTION TO ELECTRONICS MANUFACTURING 9

History, definition, wafer preparation by growing, machining, and polishing, diffusion, microlithography, etching and cleaning, Printed circuit boards, types- single sided, double sided, multi layer and flexible printed circuit board, design, materials, manufacturing, inspection.

UNIT II COMPONENTS AND PACKAGING 9

Introduction to packaging, types-Through hole technology (THT) and Surface mount technology(SMT), Through hole components – axial, radial, multi leaded, odd form. Surface-mount components- active, passive. Interconnections - chip to lead interconnection, die bonding, wire bonding, TAB, flip chip, chip on board, multi chip module, direct chip array module, leaded, leadless, area array and embedded packaging, miniaturization and trends.

UNIT III SURFACE MOUNT TECHNOLOGY PROCESS 9

Introduction to the SMT Process, SMT equipment and material handling systems, handling of components and assemblies - moisture sensitivity and ESD, safety and precautions needed, IPC and other standards, stencil printing process - solder paste material, storage and handling, stencils and squeegees, process parameters, quality control. Component placement- equipment type, flexibility, accuracy of placement, throughput, packaging of components for automated assembly, Cp and Cpk and process control. soldering- reflow process, process parameters, profile generation and control, solder joint metallurgy, adhesive, underfill and encapsulation process - applications, materials, storage and handling, process and parameters.

UNIT IV INSPECTION AND TESTING 9

Inspection techniques, equipment and principle - AOI, X-ray. Defects and Corrective action - stencil printing process, component placement process, reflow soldering process, underfill and encapsulation process, electrical testing of PCB assemblies- In circuit test, functional testing, fixtures and jigs.

UNIT V REPAIR, REWORK, QUALITY AND RELIABILITY OF ELECTRONICS ASSEMBLIES 9

Repair tools, methods, rework criteria and process, thermo-mechanical effects and thermal management, Reliability fundamentals, reliability testing, failure analysis, design for manufacturability, assembly, rework ability, testing, reliability, and environment.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Perform fabrication of Wafer and PCBs

CO2 : Recognize the importance of Through Hole Technology (THT) and Surface Mount Technology (SMT)

CO3 : Demonstrate various steps in Surface Mount Technology (SMT)
CO4 : Identify various testing and inspection methods of populated PCBS
CO5 : Discuss various techniques in repair, rework, quality and reliability of electronics Assemblies

MF7074 FLEXIBLE MANUFACTURING SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the Modern manufacturing systems
- To understand the concepts and applications of flexible manufacturing systems

UNIT I PLANNING, SCHEDULING AND CONTROL OF FLEXIBLE MANUFACTURINGSYSTEMS **9**

Introduction to FMS - development of manufacturing systems - benefits - major elements of FMS - types of flexibility - FMS application and flexibility –single product, single batch, n - batch scheduling problem - knowledge based scheduling system.

UNIT II COMPUTER CONTROL AND SOFTWARE FOR FLEXIBLE MANUFACTURING SYSTEMS **9**

Introduction - composition of FMS - hierarchy of computer control - computer control of work center and assembly lines - FMS supervisory computer control - types of software specification and selection - trends.

UNIT III FMS SIMULATION AND DATA BASE **9**

Application of simulation - model of FMS - simulation software - limitation - manufacturing data systems - data flow - FMS database systems - planning for FMS database.

UNIT IV GROUP TECHNOLOGY AND JUSTIFICATION OF FMS **9**

Introduction - matrix formulation - mathematical programming formulation - graph formulation - knowledge based system for group technology - economic justification of FMS - application of possibility distributions in FMS systems justification.

UNIT V APPLICATIONS OF FMS AND FACTORY OF THE FUTURE **9**

FMS application in machining, sheet metal fabrication, prismatic component production - aerospace application - FMS development towards factories of the future - artificial intelligence and expert systems in FMS - design philosophy and characteristics for future.

TOTAL: 45 PERIODS

Course Outcomes

Upon successful completion of this course, students will be able to:

CO1 : Understand and remember planning, scheduling, and control techniques to optimize Flexible Manufacturing Systems (FMS) operations.

CO2 : Evaluate and Analyse the role of computer control and software in enhancing the efficiency and functionality of FMS

CO3 : Apply simulation and database techniques to model, Analyse, and optimize FMS processes and data flow.

CO4 : Analyse and evaluate different methodologies for justifying the implementation of FMS, including group technology and economic justification approaches.

CO5 : Understand the diverse applications of FMS across industries and create conceptual designs for future factories integrating FMS principles, AI, and Expert Systems.

MF7075	INDUSTRIAL ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the functions of the basic components of a Robot.
- To study the use of various types of End of Effectors and Sensors.
- To impart knowledge in Robot Kinematics and Programming.
- To learn Robot safety issues and economics.

UNIT I FUNDAMENTALS OF ROBOT **9**

Robot - Definition - Laws of Robot- Robot Anatomy - Co ordinate Systems, Work Envelope, Types and Classification-Specifications - Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load - Robot Parts and their Functions - Need for Robots-Different Applications - Material Handling, Processing and Assembly.

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS **9**

Pneumatic Drives - Hydraulic Drives - Mechanical Drives - Electrical Drives - Stepper Motors, Servo Motors - Salient Features, Applications and Comparison of all these drives. End Effectors - Grippers - Mechanical Grippers, Pneumatic and Hydraulic - Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT III SENSORS AND MACHINE VISION **9**

Requirements of a sensor, Principles and Applications of various types of sensors - contact sensors - touch sensors, position & displacement sensors - potentiometers, encoders, LVDT, pneumatic sensors, force & torque sensors, wrist sensors, joint sensors, tactile array sensors, slip sensors for robot grippers, Proximity & Range sensors, optical sensors, Electro-optical imaging sensors. Machine vision - Camera, Frame Grabber, Sensing and Digitizing Image Data-Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition.

UNIT IV ROBOT KINEMATICS **9**

Forward Kinematics and Inverse Kinematics, Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 & 3 Dimension), Co-ordinate reference frame, Velocity and Forces - Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design - Derivations and problems.

UNIT V ROBOT PROGRAMMING AND ROBOT ECONOMICS **9**

Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effectors commands and simple Programs. RGV, AGV: Implementation of Robots in Industries - Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

TOTAL: 45 PERIODS

Course Outcomes

Upon successful completion of this course, students will be able to:

CO1 : Describe robot functions, components, and classifications.
CO2 : Explain different robot drive systems and end effector types.
CO3 : Analyse sensor applications and principles in robotics.
CO4 : Apply forward and inverse kinematics for robot manipulation.
CO5 : Explain robot programming languages and economic considerations.

MF7076	NANO TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

At the end of this course the students are expected to understand the general issues relating to nanotechnology and nanofabrication.

- Methods for production of Nanomaterials.
- Characteristic techniques of Nanomaterials

UNIT I INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY 9

History, background scope and interdisciplinary nature of nanoscience and nanotechnology, scientific revolutions. Definition of Nanometer, Nanomaterials, and Nanotechnology. Concepts of nanotechnology - size dependent phenomena, surface to volume ratio, atomic structure, molecules and phases, energy at the nanoscale molecular and atomic size.

UNIT II SYNTHESIS NANOMATERIALS AND PROCESSING OF NANOMATERIALS BY PHYSICAL METHODS 9

Introduction: Importance of Synthesis and Processing techniques, nanofabrication, Bottom-Up versus Top Down; Top-down approach with examples. Stability and dispersion of Nanoparticles, Surface modification of inorganic nanoparticles by organic functional groups Physical Methods: Ball milling synthesis, Arc discharge, RF-plasma, Plasma arch technique, Inert gas condensation, electric explosion of wires, Ion sputtering method, Laser pyrolysis, Molecular beam epitaxy and electrodeposition. Electro spinning, Physical vapor Deposition (PVD) - Chemcial vapour Deposition (CVD) - Atomic layer Deposition (ALD) - Self Assembly - LB (Langmuir-Blodgett) technique.

UNIT III PROCESSING OF NANOMATERIALS BY CHEMICAL METHODS 9

Chemical precipitation methods - co-precipitation, arrested precipitation, sol - gel method, chemical reduction, photochemical synthesis, electrochemical synthesis, Microemulsions or reverse micelles, Sonochemical synthesis, Hydrothermal, solvothermal, supercritical fluid process, solution combustion process,4 spray pyrolysis method, flame spray pyrolysis, gas phase synthesis, gas condensation process, chemical vapor condensation. Fundamental aspects of VLS (Vapor-Liquid-Solid) and SLS (SolutionLiquid-Solid) processes - VLS growth of Nanowires - Control of the size of the nanowires - Precursors and catalysts - SLS growth - Stress induced recrystallization.

UNIT IV LITHOGRAPHY 9

Nanomanipulation and Nano lithography - Soft Lithography - Electron beam lithography, SEM based nanolithography, AFM based nanolithography, Ion beam lithography - Oxidation and metallization - Mask and its application - Deep UV lithography, X-ray based Lithography, Dip pen lithography. Self-assembly of Nanoparticles and Nanowires.

UNIT V CHARACTERISATION OF NANOMATERIALS 9

Scanning Probe Microscopy (SPM) – Scanning tunneling microscope, Transmission electron microscope, Scanning transmission electron microscope, Atomic force microscope, Scanning force microscopy, Electrostatic force microscopy , Dynamic force microscopy, Magnetic force microscopy, Scanning thermal microscopy, Peizo force microscopy, scanning capacitance microscopy, Nano indentation - Issues in characterization of nanomaterials.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the basic concepts of nano science and nano technology
CO2 : Familiarize with synthesis and processing of nano materials.
CO3 : Elaborate processing of nano materials by chemical methods.
CO4 : Acquaint with various types of lithography.
CO5 : Demonstrate various characterization techniques for nano technology.

MF7077	TOTAL PRODUCTIVE MAINTENANCE	L	T	P	C
		3	0	0	3

OBJECTIVE

- To teach the students basic concepts of Total Productive Maintenance. Expose the students to the objectives, maintenance models, group activities, logistics, condition monitoring and implementation of Total Productive Maintenance.

UNIT I MAINTENANCE CONCEPTS 9

Introduction - Objectives and functions – Productivity, Quality, Reliability and Maintainability (PQRM) - Terotechnology - Reliability Centered Maintenance - Predictive Maintenance - Condition Based Maintenance - maintainability prediction - availability and system effectiveness- maintenance costs - maintenance organization.

UNIT II MAINTENANCE MODELS 9

Minimal repair - As Good As New policy - maintenance types - balancing PM and breakdown maintenance - PM schedules: deviations on both sides of target values - PM schedules: functional characteristics - replacement models.

UNIT III TOTAL PRODUCTIVE MAINTENANCE 9

Zero breakdowns - Zero Defects and TPM - maximizing equipment effectiveness – Autonomous maintenance program - five pillars of TPM - TPM small group activities - TPM organization - Management Decision - Educational campaign - Creation of Organizations - Establishment of basic policies and goals - Formation of master plan - TPM implementation.

UNIT IV MAINTENANCE LOGISTICS 9

Human factors in maintenance - maintenance manuals - maintenance staffing methods - queuing applications - simulation - spare parts management - maintenance planning and scheduling.

UNIT V ONLINE MONITORING 9

Condition monitoring - Infrared Thermography, Oil Analysis, acoustic emissions testing, Motor Current Analysis, Vibration Measurement and Analysis, Wear Debris Monitoring, Visual checks - corrosion control - Maintenance Management Information System - Expert system applications.

TOTAL: 45 PERIODS

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Understand the principles of TPM pillars and Terotechnology for effective maintenance strategies.

CO2 : Evaluate maintenance models like Predictive Maintenance and Reliability Centered Maintenance for optimizing equipment performance.

CO3 : Apply Total Productive Maintenance (TPM) principles to minimize breakdowns and defects in equipment.

CO4 : Create maintenance plans and schedules using queuing applications and simulation techniques.

CO5 : Analyse online monitoring methods such as Infrared Thermography and Vibration Measurement for proactive maintenance actions.

ML7751 SURFACE ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVE

The subject provides knowledge on various types of corrosion, their kinetics, testing and methods of protection as well as introduction to tribology.

UNIT I INTRODUCTION **12**

Introduction to tribology, surface degradation, wear and corrosion, types of wear, adhesive, abrasive, oxidative, corrosive, erosive and fretting wear, roles of friction and lubrication-, expressions for corrosion rate. emf and galvanic series - merits and demerits -Pourbaix diagram for iron, magnesium and aluminium. Forms of corrosion - Uniform, pitting, intergranular, stress corrosion. corrosion fatigue. dezincification. erosion corrosion, crevice corrosion - Cause and remedial measures - Pilling Bedworth ratio - High temperature oxidation-Hydrogen embrittlement- Remedial Measures.

UNIT II KINETICS OF CORROSION **8**

Exchange current density, polarization - concentration, activation and resistance, Tafel quation; passivity, electrochemical behaviour of active/passive metals, Flade potential, theories of passivity, Effect of oxidising agents

UNIT III CORROSION OF INDUSTRIAL COMPONENTS 8

Corrosion in fossil fuel power plants, Automotive industry, Chemical processing industries, corrosion in petroleum production operations and refining, Corrosion of pipelines.

UNIT IV TESTING 8

Purpose of corrosion testing - Classification - Susceptibility tests for intergranular corrosion-Stress corrosion test. Salt spray test humidity and porosity tests, accelerated weathering tests. ASTM standards for corrosion testing and tests for assessment of wear

UNIT V PROTECTION METHODS 9

Organic, Inorganic and Metallic coatings, Electroless plating and Anodising - Cathodic protection, corrosion inhibitors - principles and practice - inhibitors for acidic neutral and other media. Special surfacing processes - CVD and PVD processes, sputter coating. Laser and ion implantation, Arc spray, plasma spray, Flame spray, HVOF.

TOTAL: 45 PERIODS

Course Outcomes

Upon successful completion of this course, students will be able to:

CO1 : Define various wear and corrosion mechanisms.
CO2 : Explain factors influencing corrosion rates and passivity.
CO3 : Identify corrosion problems in various industrial applications.
CO4 : Describe standard methods for corrosion testing and wear assessment.
CO5 : Explain principles and applications of various surface protection methods.

PR7021 ENGINEERING ECONOMICS AND FINANCIAL MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVE

- To introduce the concepts of economics as applied to Engineering and Management of Finance in business.

UNIT I FINANCIAL ACCOUNTING **9**

Accounting principles – preparation and interpretation of profit and loss statement – balance sheet – Fixed assets – current assets – depreciation – depreciation methods.

UNIT II PROFIT VOLUME ANALYSIS **9**

Cost volume profit relationship – relevant costs in decision making – profit management analysis – break even analysis – margin of safety – angle of incidence and multi product break even analysis Effect of changes in volume, selling price, fixed cost and variable cost.

UNIT III WORKING CAPITAL MANAGEMENT **9**

Current assets and liability decisions – Estimation of working capital requirements – Management of accounts receivable – Inventory – Cash – Inventory valuation methods.

UNIT IV CAPITAL BUDGETING **9**

Significance of capital budgeting – payback period – present value method – Accounting rate of return method.

UNIT V ENGINEERING ECONOMICS **9**

Economics – Engineering economics – Demand analysis – Laws of demand – Production and cost–Pricing methods – Cost volume profit analysis.

TOTAL: 45 PERIODS

Course Outcomes

Upon successful completion of this course, students will be able to:

CO1 : Explain core accounting principles and interpret financial statements.
CO2 : Apply cost-volume-profit (CVP) analysis for decision-making.
CO3 : Analyse working capital needs and management strategies.
CO4 : Evaluate capital budgeting techniques for project selection.
CO5 : Apply economic principles to engineering decision-making.

PR7651 PRODUCTION OF AUTOMOTIVE COMPONENTS L T P C
3 0 0 3

COURSE OUTCOMES:

The objective of this course is

1. To impart knowledge in various manufacturing methods in developing automotive components
2. To study the concepts of automobile engineering.
3. To impart the knowledge in various parts of automotive engine.
4. To understand the concepts of fuel and transmission system.
5. To learn the recent developments in automobile industries.

UNIT I ENGINE 9

Working principle of two strokes, four stroke and wankel engines – wet and dry liners – Piston and Piston rings – types – classification. Production of Cylinder block, Cylinder head, liners, oil pan, piston and piston rings and testing.

UNIT II ENGINE PARTS 9

Working principle of crank shaft – Cam shaft – valve operating mechanisms – carburetors - spark plug Production of Connecting rod , Crankshaft , push rod and rocker arm ,valves, tappets , carburetors and spark plugs.

UNIT III FUEL AND TRANSMISSION SYSTEM 9

Working principle of – Fuel pumps – fuel injection pumps of diesel engines – multi point fuel injection system – Gear Box – clutch system – differential mechanism – steering system – braking system. Production of Friction lining materials for clutch and brakes, propeller shaft, gear box housing, steering column, Energy absorbing steering column.

UNIT IV CHASSIS AND SUSPENSION SYSTEM 9

Working principle of – Suspension system – leaf spring and shock absorbers – wheel housing – design concepts of chassis (aerodynamics and cross worthiness) - Production of Brake shoes, leaf spring, wheel disc, wheel rim –usage of non metallic materials for chassis components.

UNIT V RECENT ADVANCES 9

Application of sensors and actuators – Emission control system – catalytic converter – Hydro forming of exhaust manifold and lamp housing – stretch forming of Auto body panels – MMC liners– thermal barrier coating of Engine head and valves – Selection of materials for Auto components.

TOTAL: 45 PERIODS

Course Outcomes

At the end of the course, the students are expected to

CO1 : Acquire knowledge on the manufacturing of piston assembly, cylinder and cylinder head components

CO2 : Acquire knowledge on the manufacturing of various engine components.

CO3 : Understand the manufacturing of fuel and transmission system.

CO4 : Acquire knowledge on the production of chassis and suspension system

CO5 : Acquaint with the recent development in automobile manufacturing

GE7072	FOUNDATION SKILLS IN INTEGRATED PRODUCT DEVELOPMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the global trends and development methodologies of various types of products and services
- To conceptualize, prototype and develop product management plan for a new product based on the type of the new product and development methodology integrating the hardware, software, controls, electronics and mechanical systems
- To understand requirement engineering and know how to collect, Analyse and arrive at requirements for new product development and convert them in to design specification
- To understand system modeling for system, sub-system and their interfaces and arrive at the optimum system specification and characteristics
- To develop documentation, test specifications and coordinate with various teams to validate and sustain up to the EoL (End of Life) support activities for engineering customer

UNIT I FUNDAMENTALS OF PRODUCT DEVELOPMENT 9

Global Trends Analysis and Product decision - Social Trends - Technical Trends- Economical Trends - Environmental Trends - Political/Policy Trends - Introduction to Product Development Methodologies and Management - Overview of Products and Services - Types of Product Development - Overview of Product Development methodologies- Product Life Cycle – Product Development Planning and Management.

UNIT II REQUIREMENTS AND SYSTEM DESIGN 9

Requirement Engineering - Types of Requirements - Requirement Engineering - traceability Matrix and Analysis - Requirement Management - System Design & Modeling - Introduction to System Modeling - System Optimization - System Specification - Sub-System Design - Interface Design.

UNIT III DESIGN AND TESTING 9

Conceptualization - Industrial Design and User Interface Design - Introduction to Concept generation Techniques – Challenges in Integration of Engineering Disciplines - Concept Screening & Evaluation - Detailed Design - Component Design and Verification – Mechanical, Electronics and Software Subsystems - High Level Design/Low Level Design of S/W Program - Types of Prototypes, S/W Testing- Hardware Schematic, Component design, Layout and Hardware Testing – Prototyping - Introduction to Rapid Prototyping and Rapid Manufacturing - System Integration, Testing, Certification and Documentation

UNIT IV SUSTENANCE ENGINEERING AND END-OF-LIFE (EOL) SUPPORT 9

Introduction to Product verification processes and stages - Introduction to Product Validation processes and stages - Product Testing Standards and Certification - Product Documentation - Sustenance -Maintenance and Repair – Enhancements - Product EoL - Obsolescence Management – Configuration Management - EoL Disposal

UNIT V BUSINESS DYNAMICS – ENGINEERING SERVICES INDUSTRY 9

The Industry - Engineering Services Industry - Product Development in Industry versus Academia –The IPD Essentials - Introduction to Vertical Specific Product Development processes -Manufacturing/Purchase and Assembly of Systems - Integration of Mechanical,

Embedded and Software Systems – Product Development Trade-offs - Intellectual Property Rights and Confidentiality – Security and Configuration Management.

TOTAL: 45 PERIODS

Course Outcomes

At the end of the course, the students are expected to

CO1 : Understand the development methodologies of various types of products
CO2 : Develop product management plan for a new product
CO3 : Understand the requirement engineering for new product development and convert them in to design specification
CO4 : Understand system modelling for optimum system specification and characteristics
CO5 : Develop documentation to validate and sustain up to the EoL (End of Life) support activities for engineering customer
